Thread: [Charny Screenshot tool \[v1.2\] - \[Auto-Upload images!\]](#)

Charny - April 11, 2010, 9:43 pm

It's an advanced program that takes screenshots of your screen. More explanations are given with the pictures.

In this version, you can upload your screenshots to ImageShack!!

Pictures :

[\[IMG\]http://img693.imageshack.us/img693/626/screenshot0mp.png\[/IMG\]](http://img693.imageshack.us/img693/626/screenshot0mp.png)

You can change the image format (.Png, .Bmp, .Gif and .Jpeg). The image name is followed by a number, so if you write "Screenshot" in the textbox, the screenshot will be named "Screenshot0", the second screenshot will be "Screenshot1" and so on. You can select a region or it can be full screen. You can change the hotkeys, it currently supports : F1-F12 and Ctrl + A - Ctrl + Z.

The logs (When you press the 'Logs' button) :

[\[IMG\]http://img718.imageshack.us/img718/1411/screenshot8s.png\[/IMG\]](http://img718.imageshack.us/img718/1411/screenshot8s.png)

When you take a screenshot, it add his path to the logs, when you double click it on the list, it opens the screenshot. You can save the logs to a text file and you can clear the list. You can preview the screenshot and you can open the folder where the screenshot is saved. You can also delete the screenshot and copy the path of the screenshot to your clipboard.

When you press 'Upload to ImageShack' :

[\[IMG\]http://img254.imageshack.us/img254/8562/screenshot10h.png\[/IMG\]](http://img254.imageshack.us/img254/8562/screenshot10h.png)

It uploads the selected screenshot to ImageShack.us.

The system tray icon :

Downloading Right Now!

It looks really good dude.

You should release a bit of the source for something like the select region.

Nice job!

Kotei - April 11, 2010, 10:22 pm

I agree....A source would be a nice release either. :)

Eleqtriq - April 12, 2010, 1:16 am

This is pretty nice dude, thanks for the share :)

Charny - April 12, 2010, 5:26 am

Thanks for the comments, I might make a tutorial for the 'select region' tool.

charny,

charny,

I am sad to say that since your tool isn't some "uber l33t hackzor tool" such as a FUD crypter, you might not get much feedback :(

Kotei - April 14, 2010, 10:26 am

I have to agree with Elektrisk. Only "breakthrough" tools in hacking are loaded with feedback sadly.

Charny - April 14, 2010, 1:52 pm

Yea .. I know, that's sad. Most of the crypters are leeched and they get a lot of feedback :(.

Or with anti-noob protection,
compress source in a zip and give us the password encrypted
with different algorithms (like base64).

So, if anyone wants it he would have to decrypt the zip's
password first. sounds good?
