Coded in vb.net

How to use it ?

- 1) Create a torrent with a public tracker announce.
- 2) Upload it to a direct link.
- 3) Put the direct link in the textbox
- 6) Click on build
- 7) seeder.exe will be created
- 8) execute seeder.exe on some bots / rat victims or what u want
- 9) see the seeds growing and when u have more than 10 then upload your torrents on torrent's website.

Have fun

As always, my tool is open source so u can freely use it, only 1 thing is required, giving credits.

Thanks Dude , I'll own the pirate bay :D

AssignedAssassin - April 15, 2010, 2:09 pm

sorry but im kinda confused :p

umm so all i have to do is creat a torrent file, then upload it to something? (ie. Spam or mediafire)
put that link in the program press build then send the exe to some rat'd victims?

xvisceral - April 15, 2010, 2:12 pm

Will definitely look at this, thanks

The Old Warrior - April 15, 2010, 5:03 pm

Really Nice Release Man.

Good Work, Thank you for your Source also.

Great tool. Hope it works as good as it sounds! thanks.

nick__name - April 15, 2010, 9:22 pm

Nice share, mate :)

Does it just use the default bittorrent port or can that be changed? (and what client does it use - Azureus or uTorrent; just wondering approx how much RAM/CPU the generated seeder.exe will use). Thanks!

When executed, seeder.exe will search for installed torrent clients (utorrent, bittorrent and azureus), if client is detected, seeder.exe will download your torrent from the URL u put on the builder and the torrent client will start seeding.

nick__name - April 16, 2010, 4:53 am

Very useful, thanks! :D So the torrent client runs visible to the user? Is the torrent also visible to them (or is it possible to run with either the client or torrent hidden)?

Torrent adding is hidden but the torrent client runs visible in the taskbar

Hi, can you post a screenshot of the error and your utorrent version?

I coded this program 1 year ago maybe it's depreciated and need an update in the source code, so give me more infos and I'll try to fix that.

Itzah - February 9, 2011, 4:30 pm

This looks very promising. 5 Stars!

HIGH_JAX - February 9, 2011, 4:37 pm

i know im going to sound like a nub but... do i put the .torrent file in the direct link or the whole program?

no it's ok, make a torrent (with public tracker...) then upload the torrent file into a place where it can be downloaded with a simple url copy/paste, like a free web hosting or something else. Then in the app you paste your link, not the torrent, only your link like :

<http://www.freewebsite.com/winrar.torrent>

If you want to be sure, install utorrent on your computer and executed the created exe from my tool on your computer. If you see some errors tell me, because the tool has been posted last year and maybe it doesn't work on new torrent client versions.

i got same error in this seeder

stonerkraze - February 27, 2011, 6:28 pm

I believe this still works, although I cannot tell because my torrent was seeded well to begin with and I only tried it on 10 bots. It seems to be highly detected (like half of the bots had thier avs flip a shit). Also I think it has issues with the newer client versions.

You should work on updating this because it is a really useful tool :)

ACT!V!R-ONE - April 6, 2011, 4:08 pm

Great tool have been searching for somthing like that hope it doesnt get detected with AV too
