Thread: [\(TUTORIAL\) How to Setup Darkcomet RAT 5.3.1 ~ \[FULL BEGINNERS Guide to DarkComet\]](#)

Orochimaru - July 19, 2013, 9:16 pm

[WANNA EARN SOLID MONEY WITH MINECRAFT?](#)
[CLICK HERE!!](#)

Hello and welcome to this tutorial on how to setup Darkcomet, this is going to be a nice average sized guide providing you with all the information needed to successfully run and manage the Darkcomet tool. There will be pictures, examples, step by step pieces and a lot more.

What Is Darkcomet

So the best way to start off your guide would be to explain what you will be working with first. So I will give you a quick explanation of Darkcomet, what it is and how it works. Darkcomet is a Remote Access Trojan or Remote Administration Tool. it is used mainly to gain access of a victim's PC but there are many uses for a RAT, I will provide most of them. Ability to control and view screen

File management (Upload, Execute, Download, etc)

Shell Access (CMD)

Computer Power Access (Power off, log off, etc)

Host and Registry control

Keystroke viewing and control

Network Monitoring (Wifi, View local PC's, etc)

Password access on Chrome, Firefox, Opera, Safari and IE

Task Manager Access (To See Full List, Open Spoiler) Spoiler [\(Click to View\)](#) Block

Mouse/Keyboard

Make Victim's DDoS (TCP, UDP, HTTP)

Open CD Tray

Play Sounds

Talk into their speakers

Darkcomet can be used for malicious intent, or for a prank. Many cyber criminals use RAT's like darkcomet to steal and log passwords, credit cards and more. There is a whole marketplace behind RAT's, it's mostly around botnets but RAT's are in the business too. People can make lot's of money with bots, they can use them to DDoS and make a DDoS service, steal their passwords, make shops and sell their accounts, keylog and sell logs, then sell the bots in a bot shop and a lot more.

Requirements

Okay so to have this correctly setup you are going to need a few simple requirements, I will list them below.

Access to portforwarding (Your Router user and pass)

Darkcomet

No-ip / DUC ([Download Here](#))

Winrar or 7Zip

Tutorial

Okay so once you got all of the requirements and are ready to proceed, continue to this step by step tutorial and I will show you everything you need to know!

Darkcomet - Section 1

Installing, setting up and preparing Darkcomet - Darkcomet Section 1.1

1. Extract the darkcomet folder (VERY IMPORTANT)
2. Open Darkcomet.exe
3. Agree to the EULA, terms, etc

It should look like this: [Click Here For Picture](#)

Portforwarding - Section 1

Okay so like I said, you need access to your router, otherwise you won't be able to portforward. You could still use an HTTP rat like "Loki Rat" if you don't want to portforward. Although if you want to go through all that trouble uploading the files to your FTP server and all that, you might as well go with an HTTP botnet like Cythosia, but let's get started.

Finding your Router Gateway Address - Portforwarding Section 1.1

1. Open your start menu
 2. Search for "CMD" or Open "RUN" and type "CMD" on it.
 3. Enter this code into your Command Prompt: "ipconfig"
 4. Scroll all the way up and look for "Default Gateway" and "IPv4 Address"
- (We will need IPv4 Address later)

Forwarding your Port - Portforwarding Section 1.2

5. Enter the Default Gateway IP into your URL bar
6. Login to your router, if you don't know your account search for some default logins.
7. Look for a portforwarding section (Might be in a gaming tab, every router is different)
8. Type "1604" on both "Starting Port" and "Ending Port"
9. For "Protocol" try "Both" but if there's only TCP and UDP, do both seperately
10. For "IP Address" get your IPv4 Address and enter it there
11. Enable the port and press submit

Allowing Port through Firewall - Portforwarding Section 1.3

1. Open Start menu and search "Firewall"
2. Click "Windows Firewall with Advance Security"
3. Go to "Incoming Connections" and click "New Rule"
4. Select "Port" and press the next button
5. Choose "UDP" and select "Specific Local Ports" and enter "1604"
6. Allow the connection and press next until you get to "Name"
7. Name is "darkcomet" or whatever, and give it any description
8. Click Finish and repeat it again for inbound connection but with "TCP" Port.
9. Repeat steps 1-8 but with "Outbound Connection"
10. Also you should check with your Antivirus firewall just in case.[/b]

Darkcomet - Section 2

Connecting and configuring Darkcomet - Darkcomet Section 2.1

1. Open Darkcomet.exe
2. Go to Socket / Net Section
3. Right click and press "Add port to listen to"
4. Make the Listen Port "1604" and enable "UPnP"
5. Click Listen and you have configured Darkcomet

Creating A Server (Stub/Virus) - Darkcomet Section 2.2

Okay now you will be making the virus that you will get users to run in order to infect them, there are many features on Darkcomet so I will take you through them.

1. Open Darkcomet Menu on top right corner
 - 2 Go to Server Module and click Expert.
- (If you want a list of what all the features do, read below)

Main Settings

Security Password - Adds a password so only you can manage bots
Mutex - Stops multiple connections on the same port
Server ID - The ID or Group bots that run this server are in
Profile Name - You can save your settings under a profile name
Process Hijacking - Firewall Bypass, not recommended if crypting (outdated)

Network Settings

IP/DNS - The DNS or IP Address bots will connect to
Port - Port bots will use to connect
Add - This will add the settings, remember to click this!
Also remember to click the added setting once added

Module Startup

Startup - Starts the stub with windows
Drop File in - Where the virus will be placed
Melt File - Deletes the virus execution file, but keeps virus after running
Date Created - Change the creation date to trick users
Persistence - Very important, keeps the program task from being removed

Install Message

This is basically where you make a fake error message when your virus starts to make it seem more legitimate.
Icon - Choose which img comes with the error, I suggest the "X" icon.
Title - What it says at the top of the error message (I.E "Error 804")
Message - What the actual error says "Warning, an unexpected error has occurred, program will now be terminated"
Test MessageBox - You can test the error on yourself, it is harmless and you can do it just to be sure

Module Shield

Persistent Process - Again, persistence for more than task manager, recommended.
EVERYTHING ELSE IF NOT RECOMMENDED AND IS OUTDATED IN THE MODULE SHIELD SECTION

Keylogger, Hosts, Binder, and Icon

Keylogger is able to send logged keys to a website through FTP connection.
You can manage a victim's "Hosts.txt" file through here and control which websites he can go on.
Bind a file with your server so they both run at the same time, this will make the user less suspicious.
Change icon of file to make it more legitimate and cause less suspicion.

DUC / No-iP - DNS Config Section 1

Creating a No-IP Account - DNS Config Section 1.1

1. Go to <http://www.noip.com/newUser.php> and register
2. Create a "No-ip.biz" hostname with any name you want
3. Click "No thanks, I'll use no-ip.biz" and click "Sign Up"

4. Validate your Email and Activate your Account

Configuring DUC - DNS Config Section 1.2

1. Open No/IP DUC and log into your No/Ip Account
2. Click "Edit Hosts" on the DUC Menu
3. Select your no-ip.biz website and click "Save"
4. Click Refresh Now and you're good to go!
5. Click File>Hide to get all of that out of your way

Setting up DUC or No/IP with Darkcomet - DNS Config Section 1.3

1. Open Dark Comet and click the drop down menu (Top right corner)
2. Click Server Module > Full Editor (Expert)
3. Use the Previous tips to setup your stub but leave the "Network Settings" alone
4. Instead of your IP address, enter your No/IP Website (DNS) and port "1604"
5. Press the "Add" button and click on it to select it
6. Finish your settings and press build stub

Tips and Tricks

Spreading

Spreading is basically a method to sending your server (virus) to a bunch of victims. This can be done best through a "Niche" which is basically a topic that a large amount of people are interested in, for example "Minecraft". You can make a Youtube Video about a "Minecraft Mass LastLogin Stealer" or something of the sorts, and spread your server. You can also do JDB's (Java Drive By) and use things like "Adult Cams" to attract and infect pedo's and pervs.

Crypting

Always be sure to crypt your file, this is when you edit the code of your virus to make it undetectable (FUD) by antiviruses, this will drastically increase your spreading rates. You can buy a crypter from HF, use free ones or try using tools like obfuscation or hex editing to crypt it yourself. Always remember not to upload to av scanning websites that distribute your file otherwise it will become less UD, do NOT use "VirusTotal" or "NovirusThanks". Instead you should use "Element Scanner". The best website to upload to would be: <http://ge.tt>

Money

You can make money through your bots in a lot of ways, so I will explain some of them.

1. Steal passwords and sell accounts
 2. Bitcoin/Litecoin Mining
 3. Sell DDoS service
 4. Keylog and sell logs
 5. Sell the bots themselves
- (Be creative, these were just the ways i could think off the top of my head)

That is it for my tutorial for now, I hope you enjoy and thank you for reading. Please give me feedback on what you thought about this and how I should improve it, thanks!

w7jonb - July 19, 2013, 10:54 pm

C

ould you help me over skype some time. If so i would be greatly obliged. Email me @ w7jonb@gmail.com

bayyak - July 20, 2013, 1:20 am

This tutorial has been written over 20 times,why do people keep on re-creating ? extra reputation ?

w7jonb - July 20, 2013, 8:13 pm

i still cant get it

lol

i need someone to help me and email me to help me over skype

MARVID - July 20, 2013, 8:16 pm

(Jul 20, 2013 01:20 AM)bayyak Wrote: [\[CITE\]](#) This tutorial has been written over 20 times,why do people keep on re-creating ? extra reputation ?

Find a tutorial that is this deep in depth. Oh wait, there isn't one. ?

So learn to appreciate.

Reputation you say? Enjoy yours.

Yep.. looks like you're right,all these tutorials arent enough we should make more...because entering your no IP address in dark comet with a port and clicking build stub is too hard to understand..

Bro... You have to setup your DNS address, you have to forward your port, and you have to actually build the stub. If you're saying it's so fucking easy, maybe because it's a beginners program. Why don't you go code your own malware, maybe a ring0 rootkit if this is so easy for you.

Or go download Havij and LOIC and talk shit about how you're such a l33t hax0r.

You don't even take the time to fix up your own shitty grammar. You're the one who came here to learn to use other people's tools, you're making an idiotic guess that I use them too when I clearly don't and I'm just teaching other members how. You make another fucking retarded assumption that i've read someone else's guide, you souldn't be surprised people are dicks.

Greedyswag - July 21, 2013, 8:59 pm

HQ tutorial i might use it when im will R.A.T someone

bayyak - July 21, 2013, 9:46 pm

Hah, and now you are ignoring all my other arguments and only answering one proving that this is the only thing you can manage to answer and I said grammar not spelling, that includes pinctuation so you prove my point there, everyone else enjoys the thread and you're just working extra hard to hate, it already got your rep into the negatives, but you just don't know when to stop, so I will just not waste my time with you.

.brad - July 22, 2013, 3:02 am

thanks for the guide i will check it out later on OP

Impress. - July 22, 2013, 4:48 am

nice guide we got there keep it up?

ypildex02 - July 22, 2013, 6:41 am

Than you for the very informative tutorial. This is very helpful to me.

uruk2012 - July 24, 2013, 5:22 am

thank you very much for that guide!

(message longer maker)

Tidligere - July 24, 2013, 6:32 am

Every time i try to open the darkcomet.exe it pops up with a windows with the text "you do not have the right permissions to open this program" I don't know what i'm doing wrong. please help

The Commander - July 24, 2013, 6:41 am

Great tutorial and every detailed. Keep it up!

w3areanonymous - July 24, 2013, 12:28 pm

good tutorial , easy and useful. i did not know i had to portforward for this. :/

jannenjong - July 24, 2013, 12:33 pm

Good man really nice tutorial i really like it :) Love it

SIM-1855395 - July 24, 2013, 3:09 pm

Very Very Thank you for the Tutorial.

Imperking - July 25, 2013, 12:36 am

Very nice tutorial but i got a problem!

It seems that i cant port forward on my router

I use a zxyel router and when i try to set a new router with the same port numbers its saying duplicate port number.

But when i uncheck the activate button i can add it but i cant enable it again!

So if anybody knows how to fix this please reply

hiilikeyourbeard - July 25, 2013, 4:20 am

is there anyone who would be willing to help me out with darkcomet via skype? i'm new to rats and am very interested in learning. certain things i'm having trouble figuring out. would be very helpful

Orochimaru - July 25, 2013, 10:13 am

Well the port doesn't have to be 1604 so you can change it up.

zakrib - July 25, 2013, 1:08 pm

Is the darkcomet rat u uploaded the right one, i cant rat i dno why not working for me... and i followed ur guide

Kovu™ - July 26, 2013, 11:56 am

(Jul 25, 2013 01:08 PM)omfgomfg Wrote: [\[CITE\]](#) Is the darkcomet rat u uploaded the right one, i cant rat i dno why not working for me... and i followed ur guide

As long as you aren't using DarkComet 5.4 Legacy, you're fine. In 5.4 they changed the way everything works.

Trisomy 21 - July 26, 2013, 12:52 pm

I have tried downloading and extracting this twice, and each time I extract it my Norton automatically sees Darkcomet.exe as a virus and deletes it. Does anybody know how I can get around Norton and be able to use DarkComet without it getting deleted?

dadon11811 - July 26, 2013, 2:31 pm

Cheers for this helped clear thing up:D

switchbackds - July 26, 2013, 4:33 pm

Any tips on how to send this through Facebook chat? Facebook automatically blocks .exe/.com/.scr files. :/

ajaykumar231 - July 26, 2013, 9:44 pm

helo i am ajay . i cannot download darkcomet so plz u help me and guide me how to use etc reply me plz

Help please.

Your AV Might have deleted it, try disabling your AV and getting a crypter and crypting it. Or put it in a winrar folder or if you could add it to an exception list on your AV.

Jay09 - July 31, 2013, 9:14 pm

Already figured it out, thanks though.

toolsfinder - August 1, 2013, 7:48 pm

nice thread . thanks a lot and keep the good job

MARCMARC - August 2, 2013, 2:29 pm

i need help someone, add me on skype marc-recklesspk

Veliz - August 2, 2013, 6:09 pm

Thanks for the tutorial Orochimaru.

I shall RAT some newbs and make some good profit.

TrueStalker - August 3, 2013, 2:14 am

Thanks a lot, great tutorial. People seem to think that there are tons of these but this is the only one I've found that explains every step in depth and isn't outdated somehow.

nephelim - August 3, 2013, 3:36 am

very good job to keep it up tutorial

very good job to keep it up tutorial

hhmes - August 4, 2013, 7:45 am

Nice one i must try it finally and get some slaves

DemonOfc - August 4, 2013, 6:16 pm

nice thread. thanks a lot and keep the good job

Loca - August 5, 2013, 4:50 am

Nice in-depth tutorial and thread!

I am curious because I'm a newbie and all (I'm a pussy when it comes to these things), would it be better for me to run this program via VMWare or should full 100% trust it and run it on my PC?

Please do not criticize my lack of knowledge on such a subject [directed to everyone]

Boomboxes - August 5, 2013, 5:16 am

~Thanks for this tutorial, was searching for it for like a week!

treloboy21 - August 5, 2013, 6:02 am

nice thread ? keep the good job

naganandaitachi - August 5, 2013, 3:38 pm

Nice tut Legion, good job, detailed but your other tuts are way better compared with this:(Draw back is less no of pics and also no pics in DNS Setup. Thanks for the share mate?

Pvp twinz - August 7, 2013, 3:01 pm

is this a rat or no? please answer because i want to get it

Orochimaru - August 7, 2013, 3:13 pm

(Aug 7, 2013 03:01 PM)Pvp twinz Wrote: [\[CITE\]](#) is this a rat or no? please answer because i want to get it

Yes it is a RAT, if you read the thread you would have known.

Callisto89 - August 8, 2013, 6:00 pm

doesn't work .. when i set the rat then run it i dont appear in the list HALP :(

Zink - August 10, 2013, 7:01 am

VOUCH FOR THIS TUTORIAL, Very good intructions much better then other dark comet tutorials ?

snakesoul - August 11, 2013, 4:38 am

Thank you very much, I have a question:

Will it work if I infect a pc which is in my local network?

Orochimaru - August 11, 2013, 11:36 am

(Aug 11, 2013 04:38 AM)snakesoul Wrote: [\[CITE\]](#) Thank you very much, I have a question:

Will it work if I infect a pc which is in my local network?

Thanks and yes it will, you can infect any PC within your local network as well as your own PC if you have set everything up correctly.

teapot - August 13, 2013, 9:16 pm

what do you mean "default" accounts? please explain.

Orochimaru - August 13, 2013, 9:54 pm

(Aug 13, 2013 09:16 PM)teapot Wrote: [\[CITE\]](#) what do you mean "default" accounts? please explain.

Well usually you are supposed to know the login to your router. But if not, routers come with logins that are preset and those are the default logins, the ones that come with the router. You can try those ones to log into your router to port forward.

teapot - August 13, 2013, 10:13 pm

ok thank you on the help with my previous question (speedy answer also!!! xD) I got in and when I enter my IPv4 address it says its whrong? the: subnet mask. looks to be what its looking for, is that what I should put in? also it has fixed ports, I cant change them?

ryjerrob - August 14, 2013, 3:35 am

Thanks for the tut..was wondering if there was a difference between IPv4 and IPv6 for the purpose of the program and the tut?

jhacks00 - August 14, 2013, 8:21 am

Great tutorial keep up the good work! Very noob friendly

Orochimaru - August 23, 2013, 9:25 am

(Aug 13, 2013 10:13 PM)teapot Wrote: [\[CITE\]](#) ok thank you on the help with my previous question (speedy answer also!!! xD) I got in and when I enter my IPv4 address it says its whrong? the: subnet mask. looks to be what its looking for, is that what I should put in? also it has fixed ports, I cant change them?

Nono you don't need the subnet mask, you need the Default Gateway to enter into your URL bar and it's optional on some routers that you need to enter your IPv4 address when portforwarding. Most default gateways look like this "192.168.0.1" "192.168.1.1" "192.168.1.1" or something like that. GL!

Batterz - August 24, 2013, 8:38 am

<https://www.virustotal.com/en/file/e725fdc019e2cc60a95b6b1697fb896365a21c2c9ef624ee96f62fa6ca3a3e6d/analysis/>

da fuck surely there is no virus in this, it's just the fact the program can be used for malicious reasons correct?

Ghetts - August 24, 2013, 8:41 am

Thanks for the high quality and detailed tutorial man, good work :)!

Orochimaru - August 24, 2013, 11:04 am

(Aug 24, 2013 08:38 AM)Batterz Wrote: [\[CITE\]](#)

da fuck surely there is no virus in this, it's just the fact the program can be used for malicious reasons correct?

Yes, other wise it wouldn't be so popular, the fact that darkcomet itself creates virus, it has that code within the program which gets detected by AV's.

King Xerxes - August 24, 2013, 1:15 pm

I will be trying this method out. thanks for the share.

Vaxorr - August 25, 2013, 1:52 pm

the vest detailed tut. on HF enjoyed it thanks for the share keep it up

reaand - August 25, 2013, 1:53 pm

Thanks for this guide, you help me, Bye <3 ?

damodamo2341 - August 31, 2013, 7:54 am

VERY NICE . BUT I AM ABLE TO DO ALL THIS NOW BUT I WONDER WHERE WILL MY RAT LOGS SENT TO ?

ThePanda - August 31, 2013, 7:55 am

Hey, good job ! nice tut !!
i like what you do :)

Orochimaru - August 31, 2013, 11:10 am

(Aug 31, 2013 07:54 AM)damodamo2341 Wrote: [\[CITE\]](#) VERY NICE . BUT I AM ABLE TO DO ALL THIS NOW BUT I WONDER WHERE WILL MY RAT LOGS SENT TO ?

You can choose to have them sent to yourWebsite through FTP Connection

Email through SMTP Connection

Saved on your computer

Marte145 - August 31, 2013, 11:24 am

I am very grateful with this article was of great help, always good to learn something new in the day.
Thank you very much.

pa738 - September 1, 2013, 2:03 am

I'm going to try and follow your tutorial now. 10x!

Dang3rBaloch - September 1, 2013, 11:07 am

Great tutorial, good layout and very easy to understand :)

abhisniper03 - September 1, 2013, 11:36 am

wow very nice thread i am very happy to see that here

Gunslinger - September 4, 2013, 8:24 am

is the newest version of dc better than the one you have posted or sure I just stick to the one on the tutorial?

#R00T~ - September 4, 2013, 12:15 pm

Great tutorial, will really help users learn about how rats work and how to use them.

NerwysH - September 4, 2013, 2:19 pm

Great tutorial, good layout and very easy thanks

HellolmGummy - September 5, 2013, 12:09 am

Thanks for the post, if I could give rep I would... really appreciate someone posting a clean copy of DC

Tirreg - September 6, 2013, 1:40 am

Very nice. For beginners a good guide!

LanceRauler - September 13, 2013, 10:23 am

Thank you so much for this amazing tutorial, could never get a slave without this :P

Keks224 - September 13, 2013, 10:51 am

thanks for the tutorial, it helps me :)

MagicHacker118 - September 13, 2013, 1:11 pm

Haha i think people are getting too carried away on here first few posts ncie job OP.

WadeMK - September 28, 2013, 9:48 am

Dude, I've been using DarkComet for quite a while now. It got deleted because of my AV but I retrieved it. Anyways, I remember how to do everything and my ports are obviously forwarded. (www.canyouseeme.org). I reviewed your tips but I still can't get a connection between the host, me, and the server/slave. I've tried opening the server myself, i didn't get a connection. I tried sandbox, same result. And tried another pc, same result. Help? PM me plz. Thnx

del224 - October 1, 2013, 11:15 pm

Just a quick question. So I downloaded the darkcomet client and I did everything correct, after i had built my stub i tested it with sandbox. Nothing happened, but after like 10 mins darkcomet went like "CLINGCLINGBLINGCLINGBLINGCLING" and 13 slaves appeared!? They was all from thailand, some of them had USA proxies/vpn, nothing to see. After that I appeared on the list but I believe thats because of the sandboxie test? Did I get someone elses slaves!? Slaves of the original owner of the client? It had settings saved and all that..

Anyone?

Ty!

#R00T~ - October 1, 2013, 11:34 pm

Great tutorial, very detailed I understander every bit of it.

Bet - October 2, 2013, 4:51 am

I'm trying to log in to the default gateway using the default log-in, although it's wrong :(

vqs - October 2, 2013, 10:19 pm

Great tutorial. Even a noob can follow this.

Kraken t3ch - October 3, 2013, 1:16 am

Great tutorial. Thanks for explaining in detail. super props

Maffia - October 3, 2013, 2:14 pm

Thank you OP this really helped me alot ;)

fbpages - October 4, 2013, 4:39 am

I reviewed your tips but I still can't get a connection between the host, me, and the server/slave. I've tried opening the server myself, i didn't get a connection. I tried sandbox, same result. And tried another pc, same result. Help? PM me plz. Thnx

Chief Keef SOSA - October 4, 2013, 4:41 am

Thanks for this OP! I fixed my DC server using this.

jorin1 - October 4, 2013, 8:42 am

great tutorial , thanks for the contribution .

SIM-1899562 - October 4, 2013, 9:04 am

Wonderful guide, works really well, I recommend a crypter to make it fully undetected.

harvey010 - October 5, 2013, 9:46 am

Where you said Go to "Incoming Connections" and click "New Rule" i have no incoming connections tab?

bazingaboy - October 8, 2013, 7:10 pm

I am new to all of this so its probably all normal but, in the download of Darkcomet it says there is a Trojan.backdoor in the download link in the tutorial. Is that all good? Just want to make sure. Thanks.

EDIT: Grammar

Trimerus - October 12, 2013, 11:02 pm

If I could give reputation, I sure would've done it! Thanks for this amazing HQ tutorial! Bookmarked :)

Hawt - November 6, 2013, 1:55 pm

just want to let you know you are my first TuT on DC and im going to get started, so thanks for this and yes ik there are others out there.

shawrox - November 6, 2013, 6:01 pm

Do I need to have static IP for port forwarding???

Orochimaru - November 6, 2013, 7:11 pm

(Nov 6, 2013 07:01 PM)shawrox Wrote: [\[CITE\]](#) Do I need to have static IP for port forwarding??? You can have Dynamic OR Static as long as you use No-Ip.

-Teq- - November 7, 2013, 2:01 pm

at the part where it says:

1. Open Darkcomet Menu on top right corner
 - 2 Go to Server Module and click Expert.
- (If you want a list of what all the features do, read below)

And also at the part where it says:

1. Open Dark Comet and click the drop down menu (Top right corner)
2. Click Server Module > Full Editor (Expert)

My drop down menu is on the left hand top corner and has no such options - any help would be appreciated :)

Thanks for the guide thus far though!

Orochimaru - November 7, 2013, 3:59 pm

(Nov 7, 2013 10:08 PM)vqs Wrote: [\[CITE\]](#) Is it necessary to setup an install message? Why make the

user suspicious that something is wrong with their computer?

It's not needed, but its recommended for less suspision, OR you can bind it with another ile so that THAT file opens when the victim runs the virus.

Actually no, you wouldnt be able to gain victims through just the email of another bot owner, but since you're a dumbass who posts hate on tutorials because he is unable to keep up with them, it wont really matter what i tell you.

Fexxxi - November 10, 2013, 6:35 am

Thanks alot, helped me out so much :)

acckiller - November 13, 2013, 1:49 pm

Im a noob when It come to rat I want to know If I can use zeus or ice9 as virus with darcomet?

Orochimaru - November 13, 2013, 1:57 pm

(Nov 13, 2013 02:49 PM)acckiller Wrote: [\[CITE\]](#) Im a noob when It come to rat I want to know If I can use zeus or ice9 as virus with darcomet?

You can bind your DC stub with other ones but otherwise you cannot.

acckiller - November 14, 2013, 11:55 am

Ok so this mean I can put my Zeus or ice9 in dark comet in a picture and it will work like I had a

zeus price9 in a panel...??

Tech?nique - November 14, 2013, 12:17 pm

i tried and tried again and its not working for me :(

17jarbear - November 14, 2013, 12:39 pm

Very helpful tut answered all my questions, Thanks alot!!

Babuz - November 14, 2013, 12:57 pm

Hy,

If any off you guys need some help with setting up a Darkcomet RAT, configure port forwarding and choose the right crypter to make your file FUD. Then send me a PM.

I am very experienced with this topic! I will be pleased to help.

acckiller - November 15, 2013, 5:38 am

can you tell me why my victims and I doesnt have an constant conection. what I mean is I loose my victime when I turn off my computer and when Im back I dont have victims until they click back on my virus. why?

Orochimaru - November 15, 2013, 8:16 am

(Nov 15, 2013 06:38 AM)acckiller Wrote: [\[CITE\]](#) can you tell me why my victims and I doesnt have an constant conection. what I mean is I loose my victime when I turn off my computer and when Im back I dont have victims until they click back on my virus. why?

Make sure startup and peristance is enabled in your stub and you will need to crypt your file with an FUD Crypter as his AV might be catching your virus.

Moose1313 - November 16, 2013, 12:19 am

Thank you for tutorial, well written and easy to follow. I'm having an issue though, I'm trying to test on myself. But anytime I create a stub(with 127.0.0.1; 1604) and open it on my computer I get the message I gave it, or the file it was bonded to but my computer doesn't show in the user tab of darkcomet. Port forwarding should be ok, canyouseeme, can in fact see me so I am a little stuck. Any help would be appreciated.

yprovost - November 16, 2013, 6:05 am

can someone help me to setup my darkcomet server ?

acckiller - November 16, 2013, 7:33 am

thank you for answring I have one more question is If my crypt turn to be expired does my virus will be detectable on the victims that I have already infected? If I have to update my virus how doI do it?

Orochimaru - November 16, 2013, 12:23 pm

(Nov 16, 2013 08:33 AM)acckiller Wrote: [\[CITE\]](#) thank you for answring I have one more question is If my crypt turn to be expired does my virus will be detectable on the victims that I have already infected? If I have to update my virus how doI do it?

Yess you have, right click on the victims and press update server.

acckiller - November 16, 2013, 12:36 pm

I have an last question is can I bind two different virus in the same picture or same link for exemple darkcomet exe file with blackhate exe file in the same picture. Will the victims will be infected by both at the same time?

vssn-baho - November 16, 2013, 12:36 pm

Do DarkComet gets game passwords to? Like Knight online, Conquer online, Runescape, WoW?

Nikolasi - November 16, 2013, 12:52 pm

In local conection work ,but when i put no-ip host not working..i me disable firewall and again not working i have internet ADLS 4 MB/s.. what is problim?

praetorian70 - November 16, 2013, 12:53 pm

thank you for this tutorial. This is very useful information

Hey! I don't have enough posts to pm sadly :/ But I am looking into doing this I would like some help doing so if you still are offering it! Please send me your Skype name, thank you. :)

Orochimaru - November 16, 2013, 5:18 pm

(Nov 16, 2013 01:36 PM)vssn-baho Wrote: [\[CITE\]](#) Do DarkComet gets game passwords to? Like Knight online, Conquer online, Runescape, WoW?

You can keylog it or check the google chrome, ie or firefox passwords that are saved. Or be creative and think outside the box, use one pass on another account maybe he uses the same password, or get his email and forgot my pass.

maximis975 - November 16, 2013, 11:37 pm

Hey guys im new and i need free crypter for my thing cause i made it n all but i need to crypt it if any 1 can link to one that would be great

goldenassasin - November 18, 2013, 10:57 am

if i want to listen the port 1604 in darkcomet ill get this error : each socket address (protocol / network address / port) is normally used only once

And i don't know why i get this :3

Can someone please help me out of this?

vssn-baho - November 18, 2013, 3:18 pm

Hello guys, I did everything like it says in the (btw. VERRY GOOD tutorial) but i can't find the problem because everything is working.

I did port forwarding. I opend the port 1604 for my firewall (Inbound and outbound). I made a host with no-ip. It even says that i am synchronized with DarkComet but when i make the STUB and test it on another PC or i try it with Sandboxie it doe'snt give any response.

Can someone maby tell my what i am doing wrong?

eknafrk - November 18, 2013, 3:24 pm

Thank you for the very informative post.

-Wolf- - November 18, 2013, 7:44 pm

Solid tutorial thanks for sharing im gonna try it

vssn-baho - November 19, 2013, 2:18 am

Please guys i need help. can someone help me with it?

Skype: vssn-baho@hotmail.com

acckiller - November 19, 2013, 7:14 am

why everytime I use the stib my virus do not conect? but when I use the quick server module it conect

Hannibal Rising - November 19, 2013, 7:15 am

Great tutorial, mate.

Thank you a lot!

tahareal - November 19, 2013, 8:25 am

thnks for sharing your knowledge , i love you man ! (no homo :p)

quiteer - November 19, 2013, 9:44 am

Helped me out alot! explained well. Thank you!

xbazz - November 19, 2013, 9:47 am

Hello! I've done what ever you said on Port Forwarding Section exactly the same... Followed very carefully step by step but my ports seems to be blocked.... What is wrong?

Mrcognito01 - November 20, 2013, 10:30 pm

Great tutorial made it easy to understand. Thanks bro.

Pic0 - November 21, 2013, 4:53 pm

i need some help pm me if you can help me :P

Skalva - November 21, 2013, 5:41 pm

Seems legit. (no really) Thanks for sharing.

Bobby Trill - November 22, 2013, 11:04 am

Great guide , I loved it , hope to see more guides soon !

Oghma - November 22, 2013, 11:12 am

Great guide by a great member.I am pming you some questions i have if thats ok.

popsikles - November 22, 2013, 7:29 pm

Great tut! Works well. Just need to find a good crypter now.

PM_ME_YIFF_PICS - November 22, 2013, 7:56 pm

Thank you so much this was very useful for me! Rock on, Orochimaru :)

ApertureGirl - November 22, 2013, 10:46 pm

Thanks, this is a great tutorial, helped me out with so many things I was doing wrong.

speed10 - November 23, 2013, 9:35 am

Wery thanks for your joob !! Very nice tutorial !!

Bellator - November 23, 2013, 10:58 am

Great tutorial. This is basic stuff and some people will have great use of this. Myself, i need a dictionary or a spellchecker for Firefox.

bozboz - November 23, 2013, 11:00 am

DC is awesome but it can be detected by any AV.. even the crypted file of it

RoyalGuardian - November 23, 2013, 12:54 pm

Is anybody else having the problem of the dark comet closing after about a minute or so of launching it?

el mellali - November 23, 2013, 2:26 pm

This is something, i haven't seen such quality in a while

msmithers - November 24, 2013, 12:20 pm

Followed the instructions and had it running in minutes. Great tutorial ! Thanks !!

Noel02 - November 24, 2013, 10:42 pm

My DarkComet connect and works perfectly with No-IP

sanook666 - November 25, 2013, 12:26 am

Thank you so much for great tutorial

Sutarno - November 25, 2013, 3:19 am

simple and nice tutorial

easy to understand :)

hope work for me

ItzFreaze - November 25, 2013, 9:59 pm

thanks for this guide mate :D

i am wondering ur work

Boomboxes - November 26, 2013, 6:02 am

Thanks for the guide,

blbalbalblal 35 characters blablal

Chilluminati - November 26, 2013, 10:51 am

nice tutorial and easy to understand :)

Thanks for takeing time and do this tut!

-R34Lx

PongViking - November 27, 2013, 6:18 am

Great tutorial, good layout and very easy to understand :)

krkrapatak88 - November 27, 2013, 9:14 am

thanks bro great method 35 characters

Kazumo - November 27, 2013, 11:43 am

Thanks a lot for the amazing tutorial, mate! I'll be back this weekend with thoughts after I set everything up!

Sarcosse - November 27, 2013, 12:06 pm

Great tutorial, good layout and very easy to understand :)

xandru8 - December 1, 2013, 3:23 pm

Nice tut man really easy to follow but now I have a problem ... I don't have anyone to test it with lol

jay1994 - December 1, 2013, 5:47 pm

im having an error that i cant listen through port 1604, can anyone help me?

Liromir - December 1, 2013, 7:20 pm

Its really nice u wrote this tut, but i think you should describe more - much nublets here :)

dAMOWN - December 1, 2013, 7:23 pm

Download link doesnt work, please give other..

Newbie01 - December 1, 2013, 11:01 pm

This looks so freakkn nice but in my router there is no port forward option

raybeez - December 1, 2013, 11:02 pm

(Dec 2, 2013 12:01 AM)Newbie01 Wrote: [\[CITE\]](#) This looks so freakkn nice but in my router there is no port forward option

What router are you using?

(Dec 1, 2013 06:47 PM)jay1994 Wrote: [\[CITE\]](#) im having an error that i cant listen through port 1604, can anyone help me?

Try open a different port instead of 1604

Xvice TurX - December 1, 2013, 11:07 pm

Great tut, used it and a youtube video and have my rat up and running

133720 - December 1, 2013, 11:08 pm

Thanks for sharing man.

Great tut.

xavier.kijiji - December 2, 2013, 9:27 am

when i download Darkcomet.rar it

stop at 13.mb and google chrome give my error : Download failed
and the .rar file disappear

some help would be appreciated

Dopinofi - December 3, 2013, 2:04 pm

Thank you for the tutorial man, really useful

Vexane - December 3, 2013, 3:38 pm

Thank you. I wish people could just read these before going out and asking for help in a new thread. Great guide, and glad you spent the time doing it. I had to use port 22690 though, because 1604 wasn't being nice to me for some reason.

Reinn - December 3, 2013, 4:31 pm

Worked Perfectly thank you so much!

dongrat - December 3, 2013, 9:50 pm

Nice tutorial, not sure about everyone else but I like it.

batshitinsane - December 4, 2013, 8:42 pm

the download from this DC was pre synchronized with a no-ip host which certainly wasnt mine. virus?

HarveySpecter - December 7, 2013, 7:23 pm

Thank you for making this thread it was really helpful keep up the great work.

•Neon - December 7, 2013, 10:17 pm

Awkward thing happened.. I downloaded it from your link.. It didn't open, you probably just ratted me.

Orochimaru - December 8, 2013, 6:25 am

(Dec 7, 2013 11:17 PM)Neon Light Wrote: [\[CITE\]](#) Awkward thing happened.. I downloaded it from your link.. It didn't open, you probably just ratted me.

Nah, I don't bother with RATs. I just wanted to make a tutorial to help the beginners, but my download link is pretty outdated and I can't update it ATM so you're going to have to find another one.

Maxislp - December 8, 2013, 8:53 am

for some reason I had DC working perfectly with my port open. Now NONE of the ports i try to open work. Not even 1604 or some random number like 5555. I cant open any ports for DC to work.. Any suggestions? Im running Windows 7 Ult.

Dragon339 - December 9, 2013, 8:55 am

(Dec 4, 2013 09:42 PM)batshitinsane Wrote: [\[CITE\]](#) the download from this DC was pre synchronized with a no-ip host which certainly wasnt mine. virus?

this, care guys. better run it in sanbox. avast detectes virus, but not in rat.

shagi25 - December 9, 2013, 12:54 pm

Very nice TuT m8, this will sure help those who need it. :) great work

Orochimaru - December 9, 2013, 2:23 pm

(Dec 9, 2013 09:55 AM)Dragon339 Wrote: [\[CITE\]](#) this, care guys. better run it in sanbox. avast detectes virus, but not in rat.

Hmmm, maybe 'Avast' detects a virus because it IS a virus. Instead of reading tutorials blindly, do a little research. A RAT is a tool that CREATES viruses, what do you expect. I don't really care if you use my download link as doesn't matter, feel free to scan any darkcomet provided by anyone ever and tell me the results. :)

Dragon339 - December 10, 2013, 9:11 am

so tell me, why darkcomet.exe is synchronized with no-ip program and not mine host?

AV detectes rat clients, because it creates rats. xd

snatch20 - December 10, 2013, 12:06 pm

Very useful, but pics or vids best to help newbies

magicman1337 - December 10, 2013, 12:13 pm

Nice tutorial, it's extremely easy to portforward on DC.

> Just go to "Listen to new port"

> Cmd: ipconfig, go to your standardgateway number.

> Login and find something called "DMZ Host"

> Go to your CMD again and look for your IPv4 Adres, put this adres into your DMZ Host.

> Done.

OP, you should try this it works for me. Also if you did mention this in your tut, I am sorry didn't see it ^__^.

Orochimaru - December 10, 2013, 1:12 pm

(Dec 10, 2013 10:11 AM)Dragon339 Wrote: [\[CITE\]](#) so tell me, why darkcomet.exe is synchronized with no-ip program and not mine host?

AV detectes rat clients, because it creates rats. xd

Good job you're learning, darkcomet creates rats for you skids to use.

And that's mine, i gave you my dc file which was previously used. Think a little.

OP doesn't blame u, it's alot of text : D

fandago - December 13, 2013, 5:46 am

thank you again for the useful guide :>

iamlegend101542 - December 13, 2013, 9:04 am

Great tutorial, Well organized and very easy to understand ;)

Dustbin - December 14, 2013, 8:17 pm

Download doesn't work please can you fix it.

Capricious - December 15, 2013, 3:20 am

I called my ISP and they do not provide me with the login details of the default gateway to login to my router. The lady in the phone didn't even understand what i mean lol.

I use spidigo broadband. Does anyone know the default login password?

mar926 - December 15, 2013, 8:04 am

Backdoored! ahahahah as always,,any way thanks for this info

NetSecNinja - December 15, 2013, 9:33 am

I got it figured out now

..thank you

-Violet- - December 15, 2013, 4:06 pm

Looks like a great tutorial that will come in handy for sure!

@€apricious Sadly I don't know the default password however you could simply purchase a VPN that offers portforwarding. Forwarding Ports at your own router won't be requiered anymore if you for this option.

Anonymous MadDog - December 20, 2013, 7:38 am

Big help dude thanks really appreciate it?

H4cK1t404 - December 21, 2013, 11:17 am

Hello,

I would just like to start off by saying THANK YOU to the author of this thread. Your FREE time that you sacraficed in order to write this TUT is greatly appreciated and proves your dedication to the h4ct1v1st movement. Now, for all of you that have posted negative comments, YOU ARE A LOSER. Who cares if there are already sveral TUT's explaining this. Firstly, they are all explained differently and offer several different POV on this particular RAT. One person may not understand fully this one but find another one that is written in a way they grasp. Kudos to all who are devoting time without gain (putting up FREE advice and FREE scripts, progz, appz, etc) so that they may spread the information needed to improve yourself as a h4ck3r. We all know that there is much

more to h4ck1ng other than what is disp[layed on this post, those of us who are a bit more advanced also know that it is a LONG road to where we are with a LOT of knowledge to be learned. Most of us are completely self taught and were aided in our pursuit of knowledge by TUT's similiar to these here. So either show some appreciation or just keep your comments to yourself so as not to soil the reputation of fellow h4ck3rs thus creating a negative stereotype of our culture. I don't know what everyone elses motives are for knowing these things but mine are simple, I hope to use my h4ckt1ng skills to aid the revolution. So in my opinion the more ppl who are skilled in these endeavors then the more potential soldiers we have in our cause. Join the movement or get out of the way cause change is coming and there is no room for your type of ignorance. AND WHO GIVES A SHIT ABOUT GRAMMAR.

Capricious if you hav estill not found your Default login creds and would like to know just send me a pm and I will reply with what you need... also I need to know your ISP and ROUTER info... but it safe to assume that it is either admin/admin, admin/password, admin/leave blank, admin/1234, admin/pass.... these are the most used by all manufacturers... hope it helps

danielav - December 21, 2013, 2:23 pm

Great tutorial. Where Can I get Darkcomet?

Orochimaru - December 21, 2013, 2:29 pm

That was a great post, thanks or the feedback and good luck on your cause!

IFeltINLOVEInYOU - December 21, 2013, 2:43 pm

thanks this is a good tut,helped me setup my rat while i had troble !
vouch!

RoyalGuard17 - December 24, 2013, 4:27 pm

When I start the .exe it runs upnp.exe as well, it gets installed in %Temp%. Scanned it, says malware.
Hmmm

3Im0zW0rld - December 24, 2013, 4:30 pm

Thanks for the tutorial! Now I have my DarkComet setup :D

Awesome! ?

RoyalGuard17 - December 24, 2013, 5:40 pm

I test my client and it doesn't show up on my server. Why is this? It ALWAYS does this for my RATs. I've port forwarded and used No-IP, I've even tried just using my WLAN ip. It loads the client, runs on my computer but won't show up on the server. The only way it does is if I use my LAN ip.

Can someone please help?

Demi_v3rs3 - December 25, 2013, 1:07 am

Thanks Orochimaru, this tutorial really helped me out in seeing how dumb i was for not disabling my firewall instead of looking for the missing DC exe file that seemingly hopped off my screen as i went to install... So THANKS.

Orochimaru - December 25, 2013, 6:06 pm

(Dec 25, 2013 02:07 AM)Demi_v3rs3 Wrote: [\[CITE\]](#) Thanks Orochimaru, this tutorial really helped me out in seeing how dumb i was for not disabling my firewall instead of looking for the missing DC exe file that seemingly hopped off my screen as i went to install... So THANKS.

Thanks for the feedback, no problem for the tutorial! :D

Whady22 - December 25, 2013, 7:50 pm

Thanks for the Tut it's really a nice tut, but my prob is way different :? whenever i create a server it works without being crypted but when i crypt the server it doesn't work at all, i tried many crypters and even did it manually but it doesn't work, can anyone help me, please.

Orochimaru - December 25, 2013, 8:05 pm

(Dec 25, 2013 08:50 PM)Whady22 Wrote: [\[CITE\]](#) Thanks for the Tut it's really a nice tut, but my prob is way different :? whenever i create a server it works without being crypted but when i crypt the server it doesn't work at all, i tried many crypters and even did it manually but it doesn't work, can anyone help me, please.

Don't use multiple crypters at once it corrupts it, this may be a problem with the crypter you're using as well.

revoltec88 - December 25, 2013, 8:54 pm

Hey, I've got just a little question:

If i've got someone infected, is it possible to infect other systems in his LAN? And if its possible, how should i try that?

Great tut. thanks for that :) ?

Orochimaru - December 25, 2013, 8:57 pm

(Dec 25, 2013 09:54 PM)revoltec88 Wrote: [\[CITE\]](#) Hey, I've got just a little question:

Great tut. thanks for that :) ?

Yes it is, search for a LAN Spreader! Good luck, some also come with crypters.

revoltec88 - December 25, 2013, 10:34 pm

Thank you for your fast answer :)

So i've searched now for almost an hour on that forum but i dont really find anything like a "LAN Spreader" ..

may i ask you if you know one and give me a link or something?

i would have sent you a pm but i need 25 posts to do this. so i hope that it isnt spamming what i am doing here xD

?

Anonload - December 28, 2013, 12:13 pm

I am facing some proble with DC.Please help me out.

1) I am listing to 1604 port in DC but It's not showing connected on <http://www.canyouseeme.org/>.

2) I infected my self to check whether my rat is working or not but It's not showing in user panel.

3) when I am trying to setup No-ip updater it always gives me error that can't find remote server, Try again latter..

I have added correct DNS, Email and pass also but not connecting.

Help out now...

Contact me skype: c3ll7n

?

iebuoeboeboe - January 2, 2014, 7:39 am

Very good tutorial im sure it will help lots of new people to ratting

Orochimaru - January 4, 2014, 4:11 pm

Thanks for the feedback, and that's nice of you to help out bshades!

toxicstresser - January 4, 2014, 7:54 pm

does darkcomet even work anymore? i heard it doesnt

thomasgreen - January 4, 2014, 8:33 pm

(Jan 4, 2014 08:54 PM)toxicstresser Wrote: [\[CITE\]](#) does darkcomet even work anymore? i heard it doesnt

Darkcomet version 5.3.1 is still perfectly fine, but the newest dark comet (version 5.4.1) doesn't work as it requires the other user to accept the connection (like teamviewer).

I appreciate your tutorial, explained very well, please ignore the others who say that this tutorial has been rewritten lots of times. Some things are better to be rewritten as time passes. Amazing :D I

may re setup my darkcomet.

lucz0rr - January 5, 2014, 12:59 pm

he put in the To do on connect a ddos task please don't do this thank you ;)

SIM-1993099 - January 5, 2014, 6:59 pm

I followed the tutorial, which by the way was written very well. Does it work to try to infect a computer on the same network? I disabled the antivirus on my other computer and opened the stub up. i set it to show a message box but when i open it i see the message box but nothing ever shows up in darkcomet. :/ does it work with the server and two computers being on the same network?

Legit Hackz - January 6, 2014, 8:02 pm

Thanks for the share Orochimaru! Helps out alot keep up thee good work

littleboss - January 10, 2014, 6:59 am

help when i will run the .exe it say Error: Windows cannot access the specified device, path, or file. You may not have the appropriate permission to access the item.
can someone help me?

Pi_Rat - January 10, 2014, 9:43 am

thanks for the guide very useful information . thanks for share :)

whyso - January 16, 2014, 9:03 am

Awesome tutorial! thanks for the share :)

Vafer - January 20, 2014, 6:11 am

Thanks for the guide. very detailed and helped lots.

Dylbert - January 20, 2014, 10:43 am

Thanks! I've recently returned, so I needed a comprehending and refreshing guide! But, I have came across one issue.. Darkcomet won't respond when the RAT is made up of a No-IP in Network Settings.

Also, in Client Settings, I receive this error in the No-IP tab as well. I believe this may be the reason to why Darkcomet won't respond when the RAT is made up of a No-IP? But, i'm not sure how to fix this? I'd very much appreciate tips/help! ?

Client Settings Issue:

AkiraKiku - January 20, 2014, 10:55 am

Great post! Thanks so much for the info. One question though, wouldn't an offshore dedicated server be more recommendable vs. the no-ip server?

Fortnyce - January 20, 2014, 11:06 am

Can you add me on skype? my name is Gbigbags

CrypticX - January 20, 2014, 1:48 pm

Thanks for the tutorial it was very helpful :D

edinstwenn0 - January 24, 2014, 3:59 am

Which Ip for IPv4 there are 2 sections

For That Section > Ethernet adapter Local Area Connection:

Or That Section > Ethernet adapter Local Area Connection:

I use my NoteBook so i use Generaly(All The Time) Wireless Connection.

Delta9Thc - January 24, 2014, 5:04 am

You´r awesome bro! Thanks for the Tut it really helped me allot ?

Barry whitening - January 30, 2014, 8:23 pm

Thank you for the time you took to help others!

RedBlood - February 1, 2014, 9:35 am

You have to disable the melt feature on the stub.

KnockSteadys - February 2, 2014, 3:16 pm

thanks this a cool tut on how to do this it will help alot

OnAGuestList2 - February 2, 2014, 8:29 pm

Thank You very much for the tutorial! Nice one!

xxxBLAxxx - February 4, 2014, 5:37 am

Thank you this is awesome im verry new to this stuff and read that i should now fud my server i have use some programs but it does not seem to work and im using a pc dedicated to this so i dont infect myself seeing as i am a noob and may downlaod something thats not good. eve have it on a diferent internet connection

DarkGeekMS - February 6, 2014, 12:49 pm

Good Guide For Dark Comet & Thanks A lot

andreashaddad - February 6, 2014, 10:50 pm

hi i cant seem to find the thing where you create a server, on this new dark comet rat? can you please help

rockat - February 7, 2014, 6:27 am

thanks man you rock.. very usefull tutorial keep it up!!!!!! ;-)

DarkGeekMS - February 8, 2014, 4:27 pm

Actually i like darkcomet rat and thanks for your tut dude

GreenTea - February 9, 2014, 1:07 pm

Its strange, till now I could go to my router through my Default Gateway IP, now when I type it in in

the URL bar and press enter, it comes up "This webpage is not available"

first class - February 9, 2014, 8:25 pm

that is awesome man :)
thank U so much :)

mdmguyon - February 10, 2014, 8:30 pm

A year and a half ago or so, I had DarkComet working. I just tried it and it didn't. The IP address at No-ip.com might have changed. Does that have to match something on my server? Which IP addresses do I have to put where? I tried to follow the tutorial.

Also, I had changed modems since I had DarkComet working. I just changed my portforwarding information and tried it again and it didn't work. Does anyone have any suggestions?

Does the server have to put on the same directory that was entered in the server setup? I recall that that didn't matter.

Orochimarū - February 11, 2014, 6:20 pm

That means you are missing DUC, that's the tool that connects your IP to the NO-IP DNS. Try going through those steps on my tutorial again.

Trenchguns - February 11, 2014, 6:29 pm

Everything was going fine, but I can't seem to get my ports forwarded correctly. I tried doing it manually and with upnp (yes, it was enabled on my router). The weirdest thing is that on my old computer it would work sometimes too. Any insight?

Bugatti - February 11, 2014, 10:18 pm

Okay I did everything right.. My port 1604 is open, i'm connected through DUC and everything. But when I test my stub on my friends computer it doesn't work. But I put a startup message to see if it was actually working and everything appeared to be working. But it doesn't pop up on my users tab.

babuwa82 - February 12, 2014, 1:18 am

Hi Oro!!... I have a problem.... To test DC I am running it in Virtualbox and infected my main pc I have done all the thing from Creating dns to portforwarding.... everything is ok.. all the ports are open which I have done the work in my router but still it doesnt appear in the list.... I dont understand what exactly I am doing wrong.... or its bcoz of Virtualbox?..... I have not try yet to infect other Please help

McCullough - February 12, 2014, 7:46 am

A good TUT, it looks great but i'm already know how its working but thanks.

Bugatti - February 12, 2014, 7:47 am

Same things happening to me, I tried Virtual Box and my friends computer. It doesn't appear in the list :/

krazyk - February 12, 2014, 9:34 am

Thanks for the great post! I have a quick question, obviously the point is to stay anonymous as the attacker. So if one was to acquire money, what is the most secure/anonymous way to do it? Paypal seems like an option if you make a completely fake profile and then link that to a real profile that you can transfer moey to? But that seems risky too as it wouldn't take much to figure that out. Thanks for any input.

Snapo - February 12, 2014, 11:36 am

Great tutorial :) Thank you for this men !

krazyk - February 12, 2014, 9:24 pm

Hey, okay so I crypted it, left it as an exe just to test. No password set on client or server. Tried both IP and noip services. Have triple checked my port forwarding, sometimes I even see the connection coming through router log but it never shows inside dark comet?

Nujab3s - February 15, 2014, 12:47 am

very nice tut , look forward to seeing your next tut , very good for the beginners .

vila3000 - February 15, 2014, 3:41 am

Uhh no you dont lol. PM me a screenie of what you see.

Mastercoin - February 22, 2014, 11:18 am

Good tutorial works well, easy to understand thank you for sharing

Orochimaru - February 23, 2014, 2:05 pm

Thanks for all the feedback guys, hope everyone is doing well with DC!

ketichi - February 24, 2014, 1:30 pm

I have a situation. When i open Darkcomet.exe it closes itself after 5 sec. I already read the "help.txt" and i haven't got the AV on and Windows Defender is off also cause i get this window http://cdn3.pcadvisor.co.uk/cmsdata/features/3466684/Windows_defender_turned_off.PNG but if i click the "click here to turn it on." nothing happens, the cursor is on "refreshing" but it gets stuck there.

Any hint on how to fix this ?

reycharles - February 24, 2014, 3:17 pm

I've always the same problem: port in listening but no connections.

- cisco router port forwarding DONE
- Firewall windows 7 DISABLED
- no antivirus or anti-malware enabled or installed.

I can't understand where's the problem.

ppdelani - February 25, 2014, 1:56 pm

i have setup everything with my DC it does work on myself but won't work on other pc plsss help me so tired looking for post on solution

Orochimaru - February 25, 2014, 3:30 pm

(Feb 25, 2014 02:56 PM)ppdelani Wrote: [\[CITE\]](#) i have setup everything with my DC it does work on myself but won't work on other pc plsss help me so tired looking for post on solution

You need to crypt the stub before giving it to other people otherwise there's a possibility of their Antivirus detected and removing the hardware

DeRudi - February 25, 2014, 7:23 pm

is there a newer version of the rat ? the download link is from 2012

hello124 - February 27, 2014, 3:45 am

I've done everything like you said and it's still not working.

When i open my generated .exe file nothing happens.

But when i build the stub without changing anything in network settings i show u in my own list.

So i gues i've done something wrong with no-ip. Can someone help me out?

If possible, can someone help me through skype?

thanks in advance

reycharles - February 27, 2014, 10:49 am

(Feb 25, 2014 04:30 PM)Orochimaru Wrote: [\[CITE\]](#) You need to crypt the stub before giving it to other people otherwise there's a possibility of their Antivirus detected and removing the hardware
No, it's impossible the antivirus is not present or it's disabled on the test machine.

Anyway I tried to use the direct IP (not using No-IP.org) and this time the connection was established with the remote machine but no user ID was displayed on the users list

Any clue? Maybe is my OS the problem.

Silexx - February 28, 2014, 8:15 am

Great tutorial for anyone that is starting out

Orochimaru - March 1, 2014, 5:40 pm

(Feb 28, 2014 09:15 AM)Silexx Wrote: [\[CITE\]](#) Great tutorial for anyone that is starting out

C_money - March 3, 2014, 2:23 pm

Hey man that was a great TUT, but I am having a problem. I have forwarded my ports and done all the things in the tutorial, but when I test the RAT on myself I do not show up in the users section. Can you help me?

keesvvaal - March 3, 2014, 2:29 pm

Thanks for the share!
Very nice Tutorial and easy to understand.

FrostyRulez - March 3, 2014, 2:54 pm

Anyone know how to set up DC? Having trouble with portforwarding shit... I know i'm doing it right but my port is still closed, Skype: FrostyRulez

Kyrus - March 3, 2014, 4:07 pm

(Jul 19, 2013 09:16 PM)Orochimaru Wrote: [\[CITE\]](#) Hello and welcome to this tutorial on how to setup Darkcomet, this is going to be a nice average sized guide providing you with all the information needed to successfully run and manage the Darkcomet tool. There will be pictures, examples, step by step pieces and a lot more.

What Is Darkcomet

So the best way to start off your guide would be to explain what you will be working with first. So I will give you a quick explanation of Darkcomet, what it is and how it works. Darkcomet is a Remote Access Trojan or Remote Administration Tool. it is used mainly to gain access of a victim's PC but there are many uses for a RAT, I will provide most of them. Ability to control and view screen

- File management (Upload, Execute, Download, etc)

- Shell Access (CMD)

- Computer Power Access (Power off, log off, etc)

- Host and Registry control

- Keystroke viewing and control

- Network Monitoring (Wifi, View local PC's, etc)

- Password access on Chrome, Firefox, Opera, Safari and IE

- Task Manager Access (To See Full List, Open Spoiler) Spoiler [\(Click to View\)](#) Block

- Mouse/Keyboard

- Make Victim's DDoS (TCP, UDP, HTTP)

- Open CD Tray

- Play Sounds

- Talk into their speakers

Darkcomet can be used for malicious intent, or for a prank. Many cyber criminals use RAT's like darkcomet to steal and log passwords, credit cards and more. There is a whole marketplace behind RAT's, it's mostly around botnets but RAT's are in the business too. People can make lot's of money with bots, they can use them to DDoS and make a DDoS service, steal their passwords, make shops and sell their accounts, keylog and sell logs, then sell the bots in a bot shop and a lot more.

Requirements

Okay so to have this correctly setup you are going to need a few simple requirements, I will list them below.

- Access to portforwarding (Your Router user and pass)

- Darkcomet ([Download Here](#))

- No-ip / DUC ([Download Here](#))

Winrar or 7Zip

Tutorial

Okay so once you got all of the requirements and are ready to proceed, continue to this step by step tutorial and I will show you everything you need to know!

Darkcomet - Section 1

Installing, setting up and preparing Darkcomet - Darkcomet Section 1.1

1. Extract the darkcomet folder (VERY IMPORTANT)
2. Open Darkcomet.exe
3. Agree to the EULA, terms, etc

It should look like this: [Click Here For Picture](#)

Portforwarding - Section 1

Okay so like I said, you need access to your router, otherwise you won't be able to portforward. You could still use an HTTP rat like "Loki Rat" if you don't want to portforward. Although if you want to go through all that trouble uploading the files to your FTP server and all that, you might as well go with an HTTP botnet like Cythosia, but let's get started.

Finding your Router Gateway Address - Portforwarding Section 1.1

1. Open your start menu
 2. Search for "CMD" or Open "RUN" and type "CMD" on it.
 3. Enter this code into your Command Prompt: "ipconfig"
 4. Scroll all the way up and look for "Default Gateway" and "IPv4 Address"
- (We will need IPv4 Address later)

Forwarding your Port - Portforwarding Section 1.2

5. Enter the Default Gateway IP into your URL bar
6. Login to your router, if you don't know your account search for some default logins.
7. Look for a portforwarding section (Might be in a gaming tab, every router is different)
8. Type "1604" on both "Starting Port" and "Ending Port"
9. For "Protocol" try "Both" but if there's only TCP and UDP, do both seperately
10. For "IP Address" get your IPv4 Address and enter it there
11. Enable the port and press submit

Allowing Port through Firewall - Portforwarding Section 1.3

1. Open Start menu and search "Firewall"
2. Click "Windows Firewall with Advance Security"
3. Go to "Incoming Connections" and click "New Rule"
4. Select "Port" and press the next button
5. Choose "UDP" and select "Specific Local Ports" and enter "1604"
6. Allow the connection and press next until you get to "Name"
7. Name is "darkcomet" or whatever, and give it any description
8. Click Finish and repeat it again for inbound connection but with "TCP" Port.
9. Repeat steps 1-8 but with "Outbound Connection"
10. Also you should check with your Antivirus firewall just in case.[/b]

Darkcomet - Section 2

Connecting and configuring Darkcomet - Darkcomet Section 2.1

1. Open Darkcomet.exe
2. Go to Socket / Net Section

3. Right click and press "Add port to listen to"
4. Make the Listen Port "1604" and enable "UPnP"
5. Click Listen and you have configured Darkcomet

Creating A Server (Stub/Virus) - Darkcomet Section 2.2

Okay now you will be making the virus that you will get users to run in order to infect them, there are many features on Darkcomet so I will take you through them.

1. Open Darkcomet Menu on top right corner
 - 2 Go to Server Module and click Expert.
- (If you want a list of what all the features do, read below)

Main Settings

Security Password - Adds a password so only you can manage bots

Mutex - Stops multiple connections on the same port

Server ID - The ID or Group bots that run this server are in

Profile Name - You can save your settings under a profile name

Process Hijacking - Firewall Bypass, not recommended if crypting (outdated)

Network Settings

IP/DNS - The DNS or IP Address bots will connect to

Port - Port bots will use to connect

Add - This will add the settings, remember to click this!

Also remember to click the added setting once added

Module Startup

Startup - Starts the stub with windows

Drop File in - Where the virus will be placed

Melt File - Deletes the virus execution file, but keeps virus after running

Date Created - Change the creation date to trick users

Persistence - Very important, keeps the program task from being removed

Install Message

This is basically where you make a fake error message when your virus starts to make it seem more legitimate.

Icon - Choose which img comes with the error, I suggest the "X" icon.

Title - What it says at the top of the error message (I.E "Error 804")

Message - What the actual error says "Warning, an unexpected error has occurred, program will now be terminated"

Test MessageBox - You can test the error on yourself, it is harmless and you can do it just to be sure

Module Shield

Persistent Process - Again, persistence for more than task manager, recommended.

EVERYTHING ELSE IF NOT RECOMMENDED AND IS OUTDATED IN THE MODULE SHIELD SECTION

Keylogger, Hosts, Binder, and Icon

Keylogger is able to send logged keys to a website through FTP connection.

You can manage a victim's "Hosts.txt" file through here and control which websites he can go on. Bind a file with your server so they both run at the same time, this will make the user less suspicious.

Change icon of file to make it more legitimate and cause less suspicion.

DUC / No-iP - DNS Config Section 1

Creating a No-IP Account - DNS Config Section 1.1

1. Go to <http://www.noip.com/newUser.php> and register
2. Create a "No-ip.biz" hostname with any name you want
3. Click "No thanks, I'll use no-ip.biz" and click "Sign Up"
4. Validate your Email and Activate your Account

Configuring DUC - DNS Config Section 1.2

1. Open No/IP DUC and log into your No/Ip Account
2. Click "Edit Hosts" on the DUC Menu
3. Select your no-ip.biz website and click "Save"
4. Click Refresh Now and you're good to go!
5. Click File>Hide to get all of that out of your way

Setting up DUC or No/IP with Darkcomet - DNS Config Section 1.3

1. Open Dark Comet and click the drop down menu (Top right corner)
2. Click Server Module > Full Editor (Expert)
3. Use the Previous tips to setup your stub but leave the "Network Settings" alone
4. Instead of your IP address, enter your No/IP Website (DNS) and port "1604"
5. Press the "Add" button and click on it to select it
6. Finish your settings and press build stub

Tips and Tricks

Spreading

Spreading is basically a method to sending your server (virus) to a bunch of victims. This can be done best through a "Niche" which is basically a topic that a large amount of people are interested in, for example "Minecraft". You can make a Youtube Video about a "Minecraft Mass LastLogin Stealer" or something of the sorts, and spread your server. You can also do JDB's (Java Drive By) and use things like "Adult Cams" to attract and infect pedo's and pervs.

Crypting

Always be sure to crypt your file, this is when you edit the code of your virus to make it undetectable (FUD) by antiviruses, this will drastically increase your spreading rates. You can buy a crypter from HF, use free ones or try using tools like obfuscation or hex editing to crypt it yourself. Always remember not to upload to av scanning websites that distribute your file otherwise it will become less UD, do NOT use "VirusTotal" or "NovirusThanks". Instead you should use "Element Scanner". The best website to upload to would be: <http://ge.tt>

Money

You can make money through your bots in a lot of ways, so I will explain some of them.

1. Steal passwords and sell accounts
 2. Bitcoin/Litecoin Mining
 3. Sell DDoS service
 4. Keylog and sell logs
 5. Sell the bots themselves
- (Be creative, these were just the ways i could think off the top of my head)

That is it for my tutorial for now, I hope you enjoy and thank you for reading. Please give me feedback on what you thought about this and how I should improve it, thanks!

For Firewall Rule Setting Part.

I cannot find Incoming Connections, however I can see Inbound and Outbound. Is it okay if I only do those 2 because my computer is different? Or is the incoming connections for me somewhere else?

Orochimaru - March 4, 2014, 10:05 am

(Mar 3, 2014 05:07 PM)Kyrus Wrote: [\[CITE\]](#) For Firewall Rule Setting Part.

Yeah sure, just make sure you allow the correct ports.

visible1500 - March 4, 2014, 9:34 pm

great tut! thanks for sharing dude !

xREDxHAZEx - March 6, 2014, 9:21 am

Genius. Thank you very much!

35 characters

SmokedDuvel - March 6, 2014, 12:42 pm

Is it possible to RAT someone, when I have internal ip ?

Dearrx - March 6, 2014, 1:38 pm

Heey first of all really nice tutorial. I just came on the point where i need to port forward the ports.. but it still says it's closed but in dark comet it says it's listening UpNP is on. still saying with PFportChecker port 1604 is offline. could you please help me via skype ?

if so can you send me a PM please.

Thanks in advance.

tanks - March 6, 2014, 4:17 pm

extremely helpfull thanks alot now i just need to find a good crypter !

aademov - March 6, 2014, 6:26 pm

First of all I really want to Thank you for being such a great person and sharing with us this superb tutorial!

So... Orochimaru, here is another reply about that tricky port forwarding and so on sh*t.

It really looks like this DarkComet thing doesn't seem to work OK for me. I am pretty sure I am doing everything right in my Router's settings about that port forwarding and that firewall inbound and outbound thing. The sad story for me comes when I go to canyouseeme.org I type in the port I added in the router settings and then i get the error "Error: I could not see your service on xxx.xxx.xxx.xxx on port (xxxx)" (where "xx.." is my Ip and port) ofcourse keeping in mind DarkComet program is running and listening to that specific port!

I skiped the fact that this is not working for me and created the stub anyway. Didn't work (tried it on Sandboxie and my brother's laptop).

I am sure this is something around Port Forwarding and the IP's.

I can send PM to you with videos and pictures of what exactly I am doing. I am really looking forward to get this program working!

Thank you!

thenewguy132 - March 6, 2014, 8:30 pm

i need some help i dont know what happen DC was working good untill like a week or so ago and

now when i run viruses they dont come up even in sandbox i have cube crypter witch is awesome but its going to waste can someone please help me?

mbigdav - March 8, 2014, 12:53 pm

hi great read have done a lot of research into DARK RAT on here and Google and think i will give it go and try it on a few people i know thanks again for your knowledge it helps us newbies ?

JoeHanna - March 9, 2014, 8:39 am

Great Tutorial and i learned much of it, am just newbie in hacking world .
Thanks so much .

Foreach - March 9, 2014, 10:30 am

i have followed all the steps but when i test on sandbox , nothing is displayed in DC....no user id

system_connect - March 10, 2014, 12:22 pm

Great tutorial, good layout and very easy to understand :)

I Aspire - March 10, 2014, 2:52 pm

I will definitely try this out once I get the chance

jamisi - March 12, 2014, 3:10 am

I will offer you \$30 for coffee just to give me little tutorial on the bidding to imagine.
malaysiadun@yahoo.com

brice77 - March 13, 2014, 1:20 am

I ran this program and then received a new windows startup launcher! In other words he has binded DarkComet with his own Rat infecting anybody that runs this program!

Hidden™ - March 13, 2014, 1:22 am

Great guide, I love the simplicity in it.

kingen12 - March 13, 2014, 1:24 am

Great guide! really helpful and easy to understand!

oldy2511 - March 13, 2014, 7:08 am

very good tut easy to follow thanks

JeNy77 - March 14, 2014, 4:28 pm

Hi Orochimaru,

I have a question, would this still work if I followed all of your guide but run it with Sandboxie?

Orochimaru - March 14, 2014, 4:35 pm

(Mar 14, 2014 04:28 PM)JeNy77 Wrote: [\[CITE\]](#) Hi Orochimaru,

I have a question, would this still work if I followed all of your guide but run it with Sandboxie?
Explore, experiment, learn. Try it for yourself and learn from your mistakes.

gustaa66 - March 14, 2014, 9:10 pm

Sweet thanks. Best cheap crypter for darkcomet?

justgiverelax - March 14, 2014, 9:47 pm

thx bro,today i learn a new things in my life

upsidedown - March 15, 2014, 5:22 pm

Well, here goes...first post! Thanks for all your time and effort in setting this up, it's very easy to follow. I have read so many so called 'DC tutorials' and 'how to' guides, not to mention all the DC forums, but nowhere including here, can I find the answer to my teensy weensy problem. I am OK about setting up DC 5.3 and I even planted it on my own laptop 90 miles away via Teamviewer.

However, after checking that I can indeed have full control of the willing 'slave' what happens when I power down? How do I open up on him the next time I switch on my PC? And where are the settings saved? I allowed my AV to find all the paths to the 'involved' files so I know where everything is but I still can't re-connect.

I know I'm missing something somewhere (as well as in my head), but please put me wise.

Peter Kay - March 15, 2014, 5:38 pm

great guide! can definitely learn a lot from this!

HellaCrow - March 16, 2014, 12:31 am

Is there anyway they can backtrack the rat and find who was doing it? I mean it is sending info to you. Sorry if this is a noob question just trying to look into it.

ZWoW - March 16, 2014, 12:38 am

Thanks, amazing tutorial, just done setting it up and its working good :D now I need to find a good crypter.

killermaster - March 16, 2014, 5:51 am

i m trying it on my evo wingle device plz how can i do
plz help me my router evo wingle ptcl eny body help me plz

ricefx01 - March 17, 2014, 12:03 pm

Hello,

Why all my darkcomet user disappears ? thx

Bin4ry - March 17, 2014, 2:41 pm

Really useful and well explained tutorial.

Thank you so much :)

Regards,
Bin4ry

OnAGuestList - March 17, 2014, 3:48 pm

Very Nice Tutorial ! one of the Best ones i have seen!

RichardTracy - March 17, 2014, 4:35 pm

Great guide, will be useful when I get around to setting up darkcomet.

BandWagon - March 17, 2014, 5:16 pm

Wow OP great guide thanks you so much for it! i will hack you with it, i'm sorry man but it had to be done. hold up lemme metasploit your dns linux.

Ignitions - March 17, 2014, 6:49 pm

Solid Tutorial man thanks a lot for your work

Kryptos_Movement - March 18, 2014, 4:13 pm

now i downloaded it and i got a trojnhorse dropper notice

elitejunkie - March 24, 2014, 6:32 am

i portforwarded but the site <http://www.canyouseeme.org/> says 1604 is closed (reason: connection timed out) help pls

magabush - March 27, 2014, 1:00 pm

nice one bro, easy to understand very explanatory

n1kzinhoHD - March 27, 2014, 1:42 pm

I like briefly explained tutorials, like this one. Good job on writing the tutorial, and thanks for sharing this with us. :)

zlocko - March 29, 2014, 7:14 am

Great tutorial, keep up the good work! Your TUT. is really noob friendly ? ? ?

Private Network - April 12, 2014, 7:04 am

Thanks it helped me out alot and i NEVER used a RAT before!!!!!! if i was leet/uber i would have vouched!!

packers - April 12, 2014, 7:10 am

thank you...darkcomet still a good rat ;)

pastor0804 - April 14, 2014, 7:40 am

this thing easy when you have all the requirement.. for example i need to go get a router.. but i have no choice i will get it and have it all setup.. big ups

jajma - April 19, 2014, 2:27 pm

I Have Darkcomet 5.3.1 what version you guys recomen...

Belgian - April 19, 2014, 2:30 pm

Thank you a lot for this great tutorial, OP.
I'm sure this will help out many newbies.

jajma - April 19, 2014, 2:39 pm

Thank you the tutorial help me a lot but i have a question how to used Darkcomet 5.4.1 server it no way to bring back the option of 5.3.1

Belgian - April 19, 2014, 2:41 pm

(Apr 19, 2014 02:39 PM)jajma Wrote: [\[CITE\]](#) Thank you the tutorial help me a lot but i have a question how to used Darkcomet 5.4.1 server it no way to bring back the option of 5.3.1
Why would you do that?

Kind regards.

keesvvaal - April 19, 2014, 3:02 pm

Very nice tut thanks for the share it helps alot of people.

@austin - April 20, 2014, 9:14 am

really good detailed tutorial dude will use in the future

CCBM - April 21, 2014, 3:23 pm

Very good tutorial, but I can't seem to find the part in the menu where it says Server Module and then the Expert thing. Am I just missing something on DarkComet or am I just blind? If anyone can help that would be great. If you can help, PM me for my Skype.

nicodemo - April 26, 2014, 11:26 am

excellent tutorial!

I do not have a router. I use 3G to connect to the internet. I can not do port forwarding. I could use a free vpn with port forwarding. What changes in the configuration of darkcomet and no-ip?

john12 - April 27, 2014, 8:45 am

Very good tutorial,helped me a lot thank you

Hot Mail - April 27, 2014, 2:29 pm

very very good

thank you for amazing tut??

worldwidetech - April 27, 2014, 4:32 pm

? it's Nice But I am looking more sample way then this anyway can you help me with this I do understand but I need some more help from you ' see you Massage me ??

No Ip is not logging in can you tell me why ? it has already no ip and Email and password with domain name can you tell me how to fix it ?

?Chief Keef. - April 28, 2014, 9:45 am

Ty for this. A valid DC rat download finally. ?

Acid Cat - April 28, 2014, 9:56 am

Awesome tutorial, keep up the good work buddy:)

Bloodyanon - April 29, 2014, 9:02 pm

I downloaded yet don't have the .exe file, help? :)

tenember - April 30, 2014, 2:56 am

Awesome tutorial, everything is well explained :)

wilker - April 30, 2014, 4:14 am

guys do not make shit comments about someones grammar not everyone here is born with the English language

i like this tut and it was very helpful especially to me

Uniowl - May 6, 2014, 1:28 pm

(Jul 20, 2013 01:20 AM)bayyak Wrote: [\[CITE\]](#) This tutorial has been written over 20 times,why do people keep on re-creating ? extra reputation ?I think this is the best i've read. This one i understood

HypnoPast - May 8, 2014, 10:57 am

Is this DC safe? don't wanna be ratted :D

angelknox - May 8, 2014, 3:54 pm

Hello I need help i followed all the steps exactly but i still dont chow up any help?

HypnoPast - May 9, 2014, 4:43 am

Is this DC safe? don't wanna be ratted :D

doneur - May 9, 2014, 12:56 pm

Great tutorial, good layout and very easy to understand :)

hammy2 - May 10, 2014, 12:56 am

that dint miss a thing, wish i had this when i started D;

theradik - May 10, 2014, 6:10 am

GOOD TUTORIAL MATE! I TESTED MYSELF! REALLY GOOD THANKS

kitinje - May 10, 2014, 10:03 am

Thanks man for this tutorial!! really helped me alot!! :D

TheMayor - May 11, 2014, 5:22 am

Nice tutorial, I'm having a hideous time connecting though. No matter how hard I try I simply cant get it to connect.

Cocaine. - May 11, 2014, 6:22 am

i dont understand this bit

"Allowing Port through Firewall - Portforwarding Section 1.3

1. Open Start menu and search "Firewall"
2. Click "Windows Firewall with Advance Security"
3. Go to "Incoming Connections" and click "New Rule"
4. Select "Port" and press the next button
5. Choose "UDP" and select "Specific Local Ports" and enter "1604"
6. Allow the connection and press next until you get to "Name"
7. Name is "darkcomet" or whatever, and give it any description
8. Click Finish and repeat it again for inbound connection but with "TCP" Port.
9. Repeat steps 1-8 but with "Outbound Connection"
10. Also you should check with your Antivirus firewall just in case.

I have outbound connection and inbound but not the incoming connections bit any one help ?

B4nWow~ - May 11, 2014, 12:52 pm

Great tutorial, its very easy to understand Thank you :D

IBladeZ - May 12, 2014, 12:36 am

Thanks in advance you have really help me!!!

Renwod - May 12, 2014, 10:47 am

Thanks a lot, really detailed tutorial :)

Master in Online Business - May 15, 2014, 12:26 am

(Jul 21, 2013 05:09 PM)Orochimaru Wrote: [\[CITE\]](#) Bro... You have to setup your DNS address, you have to forward your port, and you have to actually build the stub. If you're saying it's so fucking easy, maybe because it's a beginners program. Why don't you go code your own malware, maybe a ring0 rootkit if this is so easy for you.

Or go download Havij and LOIC and talk shit about how you're such a l33t hax0r.

Thanks for your support, enjoy your reputation :)

?? you dont need all this no ip or what ever the call port forward man get DE darkeye crypter simple and nice credit to DE team the have done great job just watch the video on DE crypter area u are ok to go no need DNS u have all working perfect for you

TehReco - May 18, 2014, 3:44 pm

Hi i need help with darkcomet, i never seem to get it to work. I have no-ip and all of that. But when i open the stub, nothing happens. Even when i send it to friends. I'm sure this is beacuse of the portforwarding. I can't get into my routers control panel bcuz my dad is a real dick. If anyone can still make my darkcomet work without the router control panel, i will pay if needed.

I'll give u my teamviewer link then do it through that.

Skype : Firfislez
or pm me

tyraliera - May 19, 2014, 1:32 am

nice tutorial, thanks for sharing this !!!!!

xmen63 - May 19, 2014, 3:16 am

Thanks for the share! Will definitely try it!

Alex© - May 19, 2014, 10:54 am

Nice tutorial, really in depth. RAT's are always the first thing you learn, good job.

Mr_E_Swatt - May 19, 2014, 10:47 pm

Is it just me or is the download link broken?

Mr.Motivation - May 20, 2014, 12:57 pm

i need help setting my darkcomet RAT ive tried everything to get it work many tutorials etc. but i cant understand why it dont work but i dont have acces to portforward my modem but i tried your utorrent trick and darkcomet says it is listening that port like everything working but still dont work. :(

LGxTragic - May 20, 2014, 8:15 pm

Great List. Ever time I go on this page my virus protector says that there is a threat?

Keith Cozart - May 25, 2014, 4:10 pm

I am new to DC really... Do we still use Nolp due to them saving logs ect?

ChicoFininho - June 4, 2014, 5:11 pm

Great tutorial, but the exe file is easy erase be the anti-virus software how we made him underdetected?

stylooo___ - June 8, 2014, 12:25 am

great tutorial, but its doesn" t work. I have test my server on my pc and anubis.iceclab.org, but it doesn"t work. Can you test my server or can you take a look where the problem is by teamviewer.

Kardo84 - June 8, 2014, 3:24 am

I need to get onto this one day. looks like a necessary tool

Talu - June 8, 2014, 7:56 am

Great tutorial, thanks for posting this.

Yashigo - June 9, 2014, 1:24 am

Was having a couple of simple issues prior to reading this, but this helped me sort them out. Thanks!

Noel02 - June 9, 2014, 11:54 pm

(Jun 4, 2014 05:11 PM)ChicoFininho Wrote: [\[CITE\]](#) Great tutorial, but the exe file is easy erase be the anti-virus software how we made him underdetected?

Buy a reputable crypter. I have been using DC over 3yrs now.

(Jun 8, 2014 12:25 AM)stylooo___ Wrote: [\[CITE\]](#) great tutorial, but its doesn" t work. I have test my server on my pc and anubis.iceclab.org, but it doesn"t work. Can you test my server or can you take a look where the problem is by teamviewer.

Please, take note of every steps in the tut. It is very simple to setup this RAT. Something might be wrong with your setup.

(May 25, 2014 04:10 PM)Julian Assange Wrote: [\[CITE\]](#) I am new to DC really... Do we still use NoIp due to them saving logs ect?

DUC and Noip is very important setting up DC RAT.

stealfire - June 13, 2014, 5:06 am

the link is not available

kameolite - June 13, 2014, 8:54 am

Really nice tutorial,well written,good job ,thank you!

ShadesJuggla - June 13, 2014, 4:17 pm

Do I enter my IP and port for the bots connect to? Sorry if this is a bad question. =f

(Jun 13, 2014 05:06 AM)stealfire Wrote: [\[CITE\]](#) the link is not available

It works now... try refreshing the page, that's what I had to do.?

stealfire - June 14, 2014, 2:52 am

Can you tell me why your file dont have the same md5 of officiel file ? DarkComet RAT v5.4.1

Legacy a435d60a1138c0381b362e9694df0edc 01/10/2012 at 09:01 and you're is

8B259368CE76D4B12D84FABE4A10D3DE, and when i try open they a re this error

(Jul 21, 2014 12:11 PM)latenights Wrote: [\[CITE\]](#) Who could help me setup my rat please if you could today skype me xxlavgoqsyoux and i will setup a teamviewer.

What exact problem are you having sir? Maybe I could help.

(Jul 20, 2014 04:12 PM)bizznizz Wrote: [\[CITE\]](#) Hello Orochimaru,

I got a problem at portforwarding im sure i do everything right and i already used darkcomet for like years ago but i got a new router and i cant open the port! any suggestions what the problem can be? BTW Nice TUT!<3

Do you mean:

- 1) You are unable to open the port because you can't login to the new router
- 2) You opened the port but it's still not working or says it's closed
- 3) There is no option available to open ports.

kneato - July 22, 2014, 11:31 pm

Hello Sir,

Can you help me on my problem ? I followed your tutorial.. and I'm almost succesful.. [User connection problem](#) <-- this is my problem.. I'm able to connect to 127.0.0.1 and to my real IP .. but when I use No-IP or freedns.afraid.org .. it dosen't work ?

Thanks in Advance

Orochimaru - July 24, 2014, 7:56 pm

(Jul 22, 2014 11:31 PM)kneato Wrote: [\[CITE\]](#) Hello Sir,

I try to open the file. So far I haven't yet been able to find a way around it.

Disable antivirus and all firewalls, THEN redownload the file and "Run as Administrator".

Make sure to add the file to your exceptions list on any antivirus, etc.

Good luck!

Spider Venom - August 23, 2014, 9:40 pm

Is it true that DC does not work on Windows 8?

TheCrazy8th - August 23, 2014, 11:35 pm

This is quite possibly one of the nicest made tutorials I have ever seen on HF. Well done OP.

PabloEscarNark - August 24, 2014, 12:48 pm

Thanks for this been looking for a in depth tutorial like this:)

Jasic ? - August 24, 2014, 1:01 pm

Good tutorial, got bored today & decided I wanted to set up Dark Comet. Looked for a quick tutorial & found this one.

Thanks

EnTerPlays - September 7, 2014, 6:15 pm

helped me out alot, thanks for the tut bro

mr.popper - September 10, 2014, 8:53 am

DC is automatically randomly uploading comet.db and easyredirect.log whats going on? what is easyredirect.log and where it is uploading? I did not select any slave and command.

EnTerPlays - September 13, 2014, 2:44 pm

im getting an error when trying to listen to port 1604

<https://gyazo.com/925c55db7c8fda47ac74be7b8a876e29>

macoy1991 - September 13, 2014, 2:48 pm

thanks

anyway for this.....

OwlKing - September 15, 2014, 9:52 am

Thanks for the wonderful tutorial, although I'm still experiencing some problems and I can't figure out where they come from :/

If anyone feels like helping out, PM me :)

Tropas - September 17, 2014, 1:03 pm

I'm going to give this a crack, see how it goes. In depth tutorial should work if I follow it. :)

mr_boss - September 17, 2014, 1:59 pm

This is one of the best tutorials I've seen on HF!

If I could rep you up I would ?

And I probably will once I get l33t ;)

But i recently heard that No-iP has been bought by Microsoft and it's been monitored. ? I haven't confirmed this info but it sounds legit.

You should search it up and maybe recommend another site if it's true ?

I've used no-ip before and have experience with darkcomet , but it's nice to freshen up my basic knowledge on the matter , thanks a lot bro ?

chodecakes - September 17, 2014, 2:11 pm

Very nice tut, one of the best I've seen

Cheers!

Discomfort - September 21, 2014, 5:40 pm

Super informal, nice job explaining.

ym0m - September 22, 2014, 9:47 am

Hey man, nice tutorial. I had a question about " Forwarding your Port - Portforwarding Section 1.2 ", I am using VMware and everytime I enter the Ipv4 ip, I get a invalid ip message. What am I doing wrong?

gabam - September 23, 2014, 4:41 am

nice tut dude even though i don't need it. keep up the good work

D34th4x3 - September 23, 2014, 5:28 am

A nice tutorial, must I say. Very well planned out, already have darkcomet setup.

P41N - September 24, 2014, 2:13 am

Thank you for post tut bro i will test it =]]]

Faouez - September 24, 2014, 5:32 am

Hey, good job ! nice tut !! i like what you do :)

Orochimaru - September 29, 2014, 4:10 pm

Thanks for all the support guys, hope you enjoy the newly updated tutorial! Worked on some improvements, etc. Have fun!

Theadept69 - September 30, 2014, 1:13 pm

I cant get onto the default gateway page...?

DongersMe - September 30, 2014, 1:22 pm

Thanks for the thread. Helped me out a lot. :-) Big thanks.

yungfloiyd - September 30, 2014, 10:35 pm

can i have your ym or email. i really need to ask some questions.

drkfuture - October 1, 2014, 2:23 am

If my router supports UPnp , then why do I need manual port forwarding in router ?

Either one should work ...

Orochimaru - October 1, 2014, 12:46 pm

(Oct 1, 2014 02:23 AM)drkfuture Wrote: [\[CITE\]](#) If my router supports UPnp , then why do I need manual port forwarding in router ?

Either one should work ...

Well why don't you try it then, who knows there's always a possibility, if it doesn't work then you will need to try the method provided in the tutorial.

Jazzy90 - October 4, 2014, 7:36 am

Cant open my port tried whole procedure just stuck on port forwarding help .. always show canyousee my port closed , error .
please help me via skype please

(Oct 14, 2014 03:31 AM)crashlylol Wrote: [\[CITE\]](#) Can anyone help me with it ?

Skype : Kenan.senturk7

Could you elaborate? What problems are you having exactly.

Gamezma - October 15, 2014, 4:42 pm

Thanks for the tuto, i've tried to infect some pcs with DC but it seems that it doesn't work on PCs with Seven as OS. Any solution? Or does the DC Stub just can't work in Seven+ OS versions?

Orochimaru - October 15, 2014, 5:21 pm

(Oct 15, 2014 04:42 PM)Gamezma Wrote: [\[CITE\]](#) Thanks for the tuto, i've tried to infect some pcs with DC but it seems that it doesn't work on PCs with Seven as OS. Any solution? Or does the DC Stub just can't work in Seven+ OS versions?

It should work on PCs with Windows 7 as well as 8.

Make sure you test it on yourself, also you must crypt your stub..

LynS - October 16, 2014, 11:04 am

Great Tutorial Finally My DC Server Is Up and Running ?

Hozar - October 16, 2014, 1:10 pm

Great tutorial and easy to read and to understand. I finally have Dark Comet running.?

raul42 - October 16, 2014, 1:36 pm

Well, first of all thanks for this great tut.

However, after i made all step..i just tried it on myself , and i don't recieve any keylogger details to my FTP account.

What may i done wrong?

Gamezma - October 16, 2014, 8:04 pm

(Oct 15, 2014 05:21 PM)Orochimaru Wrote: [\[CITE\]](#) It should work on PCs with Windows 7 as well as 8.

Yep... I've tested in a PC working with Windows 7, the stub does execute and appears on the task manager but i don't get any notification. But it works when i execute it on my friends VM who's working with Windows XP. Very weird.

Maybe it's because i'm working with No-ip? :/

Orochimaru - October 18, 2014, 6:32 am

(Oct 16, 2014 08:04 PM)Gamezma Wrote: [\[CITE\]](#) Yep... I've tested in a PC working with Windows 7, the stub does execute and appears on the task manager but i don't get any notification. But it works when i execute it on my friends VM who's working with Windows XP. Very weird.

Make sure you unblocked the port 1604 on your firewall settings, if you have an AV unblock it on that as well.

Azreal - October 22, 2014, 1:17 pm

I need help. Every time i click build the stub, it stops at finalizing and never finishes making the stub

phillipka - October 26, 2014, 6:51 pm

(Oct 18, 2014 06:32 AM)Orochimaru Wrote: [\[CITE\]](#) Make sure you unblocked the port 1604 on your firewall settings, if you have an AV unblock it on that as well.

I have both inbound and outbound rules set for 1604 and AV is turned off, but the stub does not notify me that it has worked. It only gives me my message and is running in task manager

bajingan007 - October 27, 2014, 5:27 am

Thank dude... good darkcomet tutorial..

Demonian - October 27, 2014, 11:29 am

man I will buy a new laptop to start learning from 0 thanks for the tut

Orochimaru - November 5, 2014, 9:01 am

Thanks for the feedback guys, glad you appreciate the thread!

chuma_chums - November 5, 2014, 10:31 pm

Orochimaru is a good thing your a business man, could you please add me on Skype so we could set up the dark comet, i already have it on my system and also have a bunch of infected users, but all of a sudden the listening port tells me only 1 usage of each socket address. could you please help me in this don't mind paying in perfect money. God bless

Orochimaru - November 8, 2014, 7:40 pm

ill try and help as many of u as i can just send me a pm thanks!

iphone5s - November 9, 2014, 10:30 am

wow, thats a huge thread bookmarked it will gonna try later thanks

Orochimaru - November 10, 2014, 2:59 pm

(Nov 10, 2014 01:02 PM)21XL Wrote: [\[CITE\]](#) Great guide that also serves as a refresher for us getting back into it. Who knows what the latest version of DC is?

Darkcomet went off hill after the implementation of Darkcomet Legacy (which would be the newest entry). Majority of the people use original darkcomet as it's way better, the latest and final original darkcomet version is the one provided :)

gurdian - November 16, 2014, 6:50 am

galactikdesign - November 25, 2014, 2:25 pm

Hi,
I have a little problem, I followed each step of your tutorial, but when I try to use the stub I built on
my computer, I see in the "Users" that I'm connected, but only 2sec after, I'm disconnected, so i can't
do anything...
Thx for your help.

Darkside900 - December 5, 2014, 12:51 pm

Thank you for the tut and dl. I really appreciate it.

Raptor H7 - December 9, 2014, 3:22 pm

I cant download it anymore :(, do you have another link?

Sopalin06 - December 12, 2014, 1:47 am

Easy tutorial ! Simple explication, full installation

Thanks :)

dicobu0903 - December 12, 2014, 10:46 am

Thanks You for the tutorial... MANY PEOPLE NEED IT

Therek - December 16, 2014, 9:05 pm

Hey, I would pm you but I don't have 25 posts due to how new I am here=(. But I very much
appreciate this tut, best on the forums for this particular topic. I have followed all your steps and
want to know if you could help me out with what I should do next, I want to do the spread, but I
sampled this by sending it to my junk comp and opened it, said error and all that, so I assumed it
worked. I just don't get how to view and do all that stuff on the junk comp via my comp. if you could
help I would greatly appreciate it

Christianmv - December 17, 2014, 2:51 pm

my ipv4 is 10.0.0.101 im using a lan cable
nothing happens when i search that

Corrupt_Krown - December 19, 2014, 6:19 pm

So the ddos function with dark comet actually works? You can use it do DDOS?

Orochimaru - December 19, 2014, 6:29 pm

(Dec 19, 2014 07:19 PM)Corrupt_Krown Wrote: [\[CITE\]](#) So the ddos function with dark comet actually works? You can use it do DDOS?

Yeah but using a Dedi or a stresser would be much more effective.

Syncking - December 21, 2014, 10:54 am

Good tutorial, thank you, much appreciated

perllo - December 21, 2014, 2:58 pm

thank for this thread i reading now !

xJ2eaction - December 22, 2014, 8:04 am

Great tutorial, good layout and very easy to understand :)

Roskov - December 22, 2014, 8:31 am

thank you for your big tuto, it's good.

LocalCaller - December 23, 2014, 10:17 pm

Worked like a charm ma man!

Thanks for your work! ?

GorrePro - December 24, 2014, 8:55 am

when I download the darkcomet my antivirus stops it and says that it detects virus, is the download still safe ? :/

DarkxReaper - December 25, 2014, 9:05 am

(Dec 24, 2014 09:55 AM)GorrePro Wrote: [\[CITE\]](#) when I download the darkcomet my antivirus stops it and says that it detects virus, is the download still safe ? :/

It's probably a false positive, DarkComet is a program used for hacking and anti-viruses consider it a virus.

(BTW Great Tutorial ?)

20141218 - December 26, 2014, 4:37 am

Is there an MD5 checksum provided somewhere with the binary of DC so you can check the integrity without freaking out?

TheyCallMeFox - December 26, 2014, 6:44 am

Great tutorial, good layout and very easy to understand :)

Cloned Jesus - December 26, 2014, 1:05 pm

Wow what a HQ post here. It really helped a new guy here like me lol ?

DoctorPringlez - December 26, 2014, 5:33 pm

This looks like it would help a lot of users here. Nice job.

SoWnBlackHawk1 - December 28, 2014, 3:01 am

how are you supposed to send the stub or virus to others. ive created the stub but how am i supposed to send it

K0tt3xZ - December 30, 2014, 3:01 am

(Dec 28, 2014 04:01 AM)SoWnBlackHawk1 Wrote: [\[CITE\]](#) how are you supposed to send the stub or virus to others. ive created the stub but how am i supposed to send it

You can bind it to an .jpg file and make sure its FUD. You might need an extension spoofer.

Happy RAT'ing ?

stavrosmilkos - December 30, 2014, 3:28 am

Thanks man but where can I find a binder to bind it to a .jpg?If you could help me thanks!

TheNorthSquad - January 1, 2015, 10:44 am

is the DC download link a clean, untouched version? too many versions online are flooded with backdoors.

?Spar - January 1, 2015, 10:49 am

This is a very detailed tut on how to set up dark comet and it has really helped me out!

infrasonic - January 4, 2015, 12:28 am

Great tutorial. Thanks! Not sure why my download won't start tho for the DCRat download..

mastermind00 - January 4, 2015, 12:56 am

Thanks for this HQ tutorial :) Really helped me.

Fajitas - January 4, 2015, 1:56 am

Finally, struggled alot with this shit

Mann02 - January 4, 2015, 5:14 am

looks like a hard worked tutorial, looking forward to follow it in the future, thanks!

John03 - January 4, 2015, 3:36 pm

Great tutorial thanks man i'll try this out

ron3y - January 4, 2015, 3:49 pm

very good tutorial I will try to do that will help thank you ...

The Shinigami - January 5, 2015, 3:17 am

Very Good Tutorial i have been wanting an updated tutorial for this since i am going to Learn more about keyloggers and Rats!

Thank you very much!

NigerianKing - January 5, 2015, 1:54 pm

thank you so much dude means so much too mean!!

LFcooledWhip - January 6, 2015, 8:50 pm

Hello. I saw this method on Youtube: https://www.youtube.com/watch?v=_fVLTEgMGNo

Would a method with No-IP work better with what is being needed to be done? Shoudl I trust the download link he provided? I have lots of questions, sorry. Is it possible viruses can spread from computer to computer? Not even connecting them, like through the wifi they are connected on? Also

can portforwarding slow down my internet or mess it up?

dontburnout - January 7, 2015, 10:16 am

Thanks dude!!! Helped me a lot!!! :)

jkjk755 - January 8, 2015, 4:30 pm

Np-lp wont install for me i have 2TB free but says i have no room in my C:\\Program files (x86)\\No-IP any help?

RealGD - January 9, 2015, 9:17 am

Great tutorial gonna follow it and see if I can have some fun with this

UnknownSir - January 9, 2015, 3:53 pm

Thanks for the tutorial, Looks good!

Can't wait to do this set-up when I get home.

Florea21 - January 11, 2015, 10:31 am

If i give the rat to my laptop works but if i give it to a friend (30km distance) don't work

xRoyalHD - January 11, 2015, 2:43 pm

Really nice tutorial thanks man :DDDD

EmkeJ9000 - January 17, 2015, 1:19 pm

can someone show me how to hack with darkcomet ower skype ?? im new in hacking and dont know how to do it.. pls send me a msg if you want to help me thanks anyway

???? - January 22, 2015, 8:59 pm

Okay so after I build the stub i try to run it on my computer, but when I go to darkcomet i dont see myself??? is it bc something went wrong or is it bc u cant run the file on yourself... thanks! Please respond id REALLY REALLLY REALLY APPRECIATE IT!!!

Sof0007 - January 23, 2015, 12:39 pm

Can Darkcomet be installed on Ubuntu? Or it is only for windows???

smegma - January 31, 2015, 2:01 am

Why did i just get infected with a rat from downloading this....

dirtyhax - January 31, 2015, 1:45 pm

Hey I'm using [censored] PRO, but I can't find a way how to use my rat when my VPN is on!

Would anyone mind helping me? Skype : muskran3

Alik10 - February 1, 2015, 12:01 pm

Great tutorial, very informative and esy to understand and learn.

uhBezerk - February 2, 2015, 7:22 am

I really do not know what to say, this guide is F*CKING AMAZING! I appreciate the fact you put all this time in explaining in extreme depth on how to set up DarkComet, Although I am a bit stuck with encryption as I'm in search of a FUD crypter which is free but I'll doubt I'd find one haha. Anyways thanks!

Wolfz123 - February 10, 2015, 12:19 am

hi im new to hacking i would like to ask is this safe? i would like to get some slaves to play with :3 (im not that kind of guy to delete files just want to open their disk drive cause its funny) then do

nothing else (Im doing this for entertainment not for money) thats why i want to rat people :D so is this safe guys please inform me :)

-Wolfz The Newbie Hacker

novazze - February 10, 2015, 2:07 pm

(Feb 10, 2015 01:19 AM)Wolfz123 Wrote: [\[CITE\]](#) hi im new to hacking i would like to ask is this safe? i would like to get some slaves to play with :3 (im not that kind of guy to delete files just want to open their disk drive cause its funny) then do nothing else (Im doing this for entertainment not for money) thats why i want to rat people :D so is this safe guys please inform me :)

-Wolfz The Newbie Hacker

Its safe as long as you dont talk about it on internet.And about the Darkcomet itself,well its safe.Just turn off your antivirus first,cause it will delete it..

Astreonic - February 10, 2015, 8:33 pm

I really liked this post, i wanted to you let know.

Xort3r - February 11, 2015, 12:03 am

thanks you brother, i needed that!!! great!!

GeezusLord - February 11, 2015, 12:27 am

Thanks for the tut. Helps a shit ton!

tqmedia - February 11, 2015, 7:49 am

Thanks bro! There is solid work!! I got it.

What_Is_Hax - February 11, 2015, 11:53 am

Thanks for this! :D ??

bmoney1991 - February 13, 2015, 3:16 pm

please some I need help on darkcomet I portforwarded I ran the test server gave me 3 green lights I tested the rat on myself connection came up. but when I send my stub to someone and im sure they downloaded it I get no users no slave please help someone ive been at this for like 5 days still cant figure it out if anyone can help me with teamviewer or over Skype id appreciate it

Skypename boukman10

MexicanFrog69 - February 14, 2015, 7:29 am

Safe download? Plz i need to know coz yeh :// i got it and it says it was malware

Ruthboy - February 17, 2015, 8:13 am

(Feb 14, 2015 08:29 AM)MexicanFrog69 Wrote: [\[CITE\]](#) Safe download? Plz i need to know coz yeh :// i got it and it says it was malware

I can easily help you. But I'd rather make a youtube video about it :)

Youtube -> csnanogaming It'll be up soon. If not. text on one of my videos, and tell me to move my ass and I'll do it :)

Relief_ - February 18, 2015, 11:16 pm

This is great! So hard to find a good tutorial on DC...

OlliePottFTW - February 19, 2015, 2:16 am

Thanks for this! its really helped ?

Muro - February 21, 2015, 1:12 am

That looks REALLY complicated for me lmao. Maybe I should start with something easier.

dadada12 - February 22, 2015, 4:57 am

Thanks man, now i know what to do, Great tutorial :)

Pavilion Blvd - February 28, 2015, 1:54 pm

Thank you for this! Just got darkcomet and have it all set up now :)

DeadlyHacker122 - March 2, 2015, 5:58 pm

can anyone help me i have no connections showing up,my skype is pupster19050

Askotion - April 1, 2015, 1:12 pm

How does this DDOS works.. Mine is not working for some reason :/ And what can i do with the mass downloader? ;)

jcharelli - April 6, 2015, 8:53 am

i thought no-ip has been blocked by microsoft

look4sky - April 7, 2015, 2:09 am

i still cant get it

lol

i need someone to help me and email me to help me over skype

tochukwu202020 - April 11, 2015, 7:52 am

pls does dackcomet hack save pasword?

and is it stable?

my sky = tochukwu202020

qunzil - April 12, 2015, 5:14 am

Hello i followed your guide but it seems like i only can remote my own computer when its executed ? Can someone please help me with this ? What am i doing wrong ? Everything shows upp green

SimpleClix - April 12, 2015, 6:03 am

Thanks you for the Nice Tutorial. :) ;)

MBOUZID1 - April 12, 2015, 11:05 am

thank you for the share mate . i needed this : 0

ttnet3838 - April 12, 2015, 11:22 am

Is the darkcomet rat u uploaded the right one, i cant rat i dno why not working for me... and i followed ur guide

h4r4mb3 - April 20, 2015, 4:32 pm

i love this tutorial could u plz help through skype?

Nonymis - April 21, 2015, 9:03 am

My PC sais the DCRat.rar contains a virus. Should i use it anyways?

OwnedBySudden - April 21, 2015, 12:35 pm

I tried the same with Njrat, but i can't even remote my own Computer? Do I have to do anything else???

RASNMAN - April 22, 2015, 11:47 am

its not working for me can someone help me?

Lucids - April 27, 2015, 2:48 pm

Useless shit, email test does not work, so the email and password are probably sent somewhere else..

Agent keylogger melted.

I believe in DC because there has been lots of work behind it.

These others are probably scams.

Mantis H - April 27, 2015, 5:08 pm

thx the coder work on the new version maybe the new version is free

Sh4ck - May 17, 2015, 11:22 am

Looks really good, im going to try it out soon.

Victor- - May 20, 2015, 1:08 pm

I hope it's going to work this time.

Luki2442 - May 21, 2015, 11:58 am

Thx mate very usefull tut. helped me

Sit Back And 420 - May 23, 2015, 12:16 am

i followed the tut correctly then i tested it on myself and i didnt come up in users but i came up in socket/net

i followed the whole tutorial and then tested it on myself but i didnt show up in the users i only showed up in socket/net

Gundogduuu - May 23, 2015, 1:10 am

I will try this out thanks for this! The other one did not work hope this one doe...

ProfitHacker44 - May 23, 2015, 12:44 pm

hey I know darkcomet will show up as virus but everytime I download it Microsoft security essentials deletes it. should I uninstall Microsoft security essentials???

crashoveride9 - May 25, 2015, 11:14 am

Hello everyone,

I would like to begin my specify parameters on darckomet were settle!

So my questions is:

how it the fact that I receive no notifications of my victims once I send my Skype trojan has my victims?

where does this failure?

Life Goes On - May 28, 2015, 3:08 pm

I will try this out very soon, thank you for explain.

dannyedc - May 29, 2015, 1:35 am

Can't wait to try this out tonight...

growsidd - May 31, 2015, 10:08 am

I have dark comet but unable to crypt. I need some help. hope you can send me a message soon. I'm ruth_anderson23 on y.ah.ooo

LetsWin - June 1, 2015, 11:31 am

I thought I was never going to find this! A mate needed this; Great tut. This is very helpful.

newhat - June 2, 2015, 6:07 am

Hey, can anyone help me setup darkcomet ?

Please send me PM with your skype address

Ownsya - June 2, 2015, 1:06 pm

Hey can u add me skype i pay you 10\$ if you can help me : skype: Supdbow

WestCoastWyatt - June 9, 2015, 7:42 pm

Great post, thanks for the help!

eklat92i - June 10, 2015, 7:58 am

Thanks for the tutorial OP , working great !

Alarmzone - June 14, 2015, 9:03 pm

Hi,

I'm hacking myself with Darkcomet and when I go through my files, many are missing in the Darkcomet interface.

For example, if I try to go on desktop, it's empty in Darkcomet.

And when I want to find my music folder or my pictures folder, I can't find them.

Is there something blocking that access ?

Thanks

verdictas - June 15, 2015, 5:28 am

Can't wait to try this when I get back home!

Moltivie - June 15, 2015, 8:58 am

Thanks for sharing man thats awesome for newmembers very detailed ?

rowenmcdaniel - July 2, 2015, 5:37 pm

Thank you for the guide, I have a question though. When using a VPN and you are assigned different IP's each time, would you have to rebuild your stub?

suckmeoffpvp - July 7, 2015, 9:25 pm

iygogfyuyuyugff test ikjoijouhyugyugtf test.2

sanq - July 8, 2015, 3:52 am

Thank you for this tutorial, this is amazing.

Thank you for sharing the darkcomet setup, it is very helpful.

SILVERHAWK - July 8, 2015, 4:40 am

Thank you for the post OP. I was finally able to get DarkComet, port forwarding, and a stub set up correctly this time! Keep up the good work!

SILVERHAWK

xXGodXx - July 9, 2015, 3:49 pm

Thanks for sharing this. You helped me!

rafix2222 - July 26, 2015, 7:42 am

Nice work! Thanks, man! I love this ;D

polomoko - July 26, 2015, 3:36 pm

Hi, I have a problem

Everything is set up correctly : port forwarding , stub, no-ip, firewall down but I still can't get it to work. I'm obviously missing somth, any help would be greatly appreciated.

Thanks in advance.

rahimakbulut - July 29, 2015, 8:37 am

thanks bro, good system. ++++++

Haikia - July 29, 2015, 11:17 am

Great tut. but I stuck at portforwarding, cant access my router.

Svennohz - July 29, 2015, 1:36 pm

Thanks for sharing lemme see this shizzle

mpaul447 - July 30, 2015, 5:47 am

Thanks for this. Today i will make my first stub :D

Strayta - August 1, 2015, 5:37 pm

awesome will return back to this after

orochimaruhf - August 6, 2015, 6:34 pm

this is such a shit tutorial u gay slut kill urslef

fitz101 - August 7, 2015, 6:26 am

@orochima you could just ignore it rather than insulting him

Orphan Crippler - August 13, 2015, 10:05 am

Great tutorial man it really helped me out

SIM-2662262 - August 16, 2015, 11:35 am

Nice tutorials, thanks men

adigoldin11 - August 17, 2015, 6:08 am

Great tutorial, good layout and very easy to understand :)

KnockSteadys - August 18, 2015, 9:35 pm

nice tut man thanks for the info

cortex8199 - September 4, 2015, 10:30 am

nice tutorial but it doesn't work for me ,maybe someone can help me by skype ?

Blue2003 - September 5, 2015, 3:57 am

Thanks you soo much for sharing this :)

luckyns - September 7, 2015, 8:34 am

Nice tutorials, thanks men

TheWhiteHatter - September 7, 2015, 3:20 pm

Nice tut, thanks for the help

jizzuz - September 9, 2015, 11:45 am

thanks man it helped ;) nice tut

MrPK21 - September 13, 2015, 5:10 am

I have Darkcomet working.

In my testing I had the infected file on my site no where a user should be.
unless they was scanning through the back end of my website.

anyway they have run the file and showed up in my Darkcomet.

they stay active for about 2 mins in this time i can't do anything not even kill the server.
some times i can end up with a list of about 8 of this 1 user in my Darkcomet

there ip is: 95.25.218.7

is there any i can do?

can't send images yet,?

Hannibal raw - September 13, 2015, 10:13 am

Very useful thanks for sharing mate! Big vouch

auscas - September 21, 2015, 7:46 pm

what would be the best way to spread the darkcomet rat i need help with that everything else is easy

jokerguy - October 4, 2015, 3:20 am

everything work like port forward and no-ip when i'm make a server and run it on own self then not work why please explain me

FonNP - October 4, 2015, 8:11 am

Thanks for the help. Was struggling to get mine working!!

Bitcoin Bastard - October 4, 2015, 10:46 am

Actually way more in-depth then I pictured. Great beginner tutorial to say so myself!

soulreaverz - October 4, 2015, 1:27 pm

i have the same problem..multiples same ip apearing in my DC..wth is it? lol and i cant do nothing cause they die after some time lol

kaliowned97 - November 12, 2015, 2:24 am

Great job on the tutorial!

botinist - December 11, 2015, 7:03 pm

Could someone please post a safe/clean HackForum's link to a download of the best version of DarkComet client/builder? Thanks!

?Spar - December 11, 2015, 7:19 pm

Thank you for this. I will have to check it out in further detail.

dogwalker - December 17, 2015, 1:55 pm

So is it possible to rat an iPad or iPhone using Darkcomet?

GreySkull - December 17, 2015, 6:50 pm

OP is gone. ,,,,,,,,,,,,,,,,,,,,,,

SIM-2062840 - December 22, 2015, 9:18 am

(Dec 17, 2015 02:55 PM)dogwalker Wrote: [\[CITE\]](#) So is it possible to rat an iPad or iPhone using Darkcomet?

i hope thats not a serious question.

Saney - December 26, 2015, 12:07 pm

It is not working for me:(

zalim786 - January 5, 2016, 1:52 pm

for some reasons, it isnt working that RAT doesnt work on windows 10

i created a rat names tekl.exe

ran it on xp, it worked, ran it on 7 and 8 it worked but on windows 10 its not working

all of the safety features are down still nothing, you can see the file running in task manager nothing is blocking it, still no connection on my dk ...

any idea what could it be?

ilias13 - January 6, 2016, 1:47 am

good tut thank you !!!!!

RomanMoroni - January 6, 2016, 2:48 am

Thanks for the tutorial - great read

scuba2409 - January 6, 2016, 6:13 am

Thanks for the tutorial welldone

Memerz - January 6, 2016, 10:32 pm

Thanks for the tutorial, it was easy to follow.

orochimaru hf - January 24, 2016, 10:43 am

gr8 tut m8 i r8 8/8 dont h8 just masturb8 2 l8 close the g8

Black.Hawk - January 24, 2016, 11:30 am

Much appreciated ! Finally I found something like this! cheers!

Opinsect - January 24, 2016, 4:27 pm

Does darkcomet work on windows 10? Cause for me its not working, I try opening it and it just closes, any suggestions?

jaydei - January 25, 2016, 10:46 am

old but gold,thanks alot mate

f o r m i d a b l e - January 25, 2016, 7:57 pm

I'd like to see how this works for bitcoin.

KickAss942 - January 25, 2016, 11:11 pm

I'm getting error: CANNOT FIND MODULE 301
please help ?

Furix98 - February 11, 2016, 9:00 am

Great tutorial mate , darkcomet is one of my favorite rat !

dafr34k - February 22, 2016, 12:12 pm

great tutorial , thank you bro,,, :) will try this.

hendryirvinmaynard - February 23, 2016, 2:35 pm

well, what should i do if i use usb modem (like huawei)? there's no portforwarding in usb modem...

Sheeple - February 23, 2016, 5:14 pm

(Feb 23, 2016 03:35 PM)hendryirvinmaynard Wrote: [\[CITE\]](#) well, what should i do if i use usb modem (like huawei)? there's no portforwarding in usb modem...

Get a VPN that allows portforwarding like RA4W VPN

Rodgyy - March 1, 2016, 9:49 am

My router page never loads no matter what I do! That's my only issue. Any solutions?

Hopsin - March 1, 2016, 3:44 pm

Hi. Thank you very much. This will come in handy for newbies.

Business Database - March 1, 2016, 11:00 pm

Thank You for this Tutorial. :) I have done all the steps, now i am testing if it spreads.

cornelutzu96 - March 2, 2016, 5:43 am

Nice tutorial .. Thank you man !

OrWestSide - March 6, 2016, 6:28 am

Read the tutorial but I need to ask something.Why do I need to portforward?

Phoeni? - March 6, 2016, 6:33 am

(Mar 6, 2016 07:28 AM)OrWestSide Wrote: [\[CITE\]](#) Read the tutorial but I need to ask something.Why do I need to portforward?

Port forwarding allows your slaves to communicate with your RAT client.

OrWestSide - March 7, 2016, 3:04 am

(Mar 6, 2016 07:33 AM)Phoeni? Wrote: [\[CITE\]](#) Port forwarding allows your slaves to communicate with your RAT client.

Oh got it.Thank you

G_LO - March 13, 2016, 6:41 am

Good for beginners. Three years ago, he was considered the best solution

Etharas - March 20, 2016, 7:24 pm

Awesome tutorial, trying to get into this and starting off with something (somewhat) simple.

I've built the stub and ran it on my own computer yet it doesn't seem to say I've been ratted?

Nothing is coming up in the main DC page.

And yes, everything has been portforwarded and exceptions have been added in my firewall.

Thanks.

spvious - April 4, 2016, 2:32 pm

alright so i had my friend download the stub and i didn't get his user? i port forward and i use no ip. anyone mind helping me?

Eskuu - April 4, 2016, 4:14 pm

Well done for this dude. very good stuff!

zernkska - April 6, 2016, 3:32 am

(Jul 21, 2013 05:41 PM)bayyak Wrote: [\[CITE\]](#) So you wrote in the rep,very disrespectful... How did I disrespect you ? I was just stating that there are too many tutorials already so why make the forum cluttered.. and you said appretiate my hard work? You call this hard work ? You're using other people's tools,you've read someone else's guide and wrote one in your own way...and you call it hard work ?

Seriously some members here are such dicks

Mate,please pm me your skype, I need help with DC, I can pay.

Hoaxing - April 28, 2016, 5:05 pm

where can i download darkcomet?

Linusky - April 30, 2016, 11:17 am

cool stuffff thx for sharing

dittiothegamer - May 15, 2016, 2:27 pm

(Apr 4, 2016 02:32 PM)spvious Wrote: [\[CITE\]](#) alright so i had my friend download the stub and i didn't get his user? i port forward and i use no ip. anyone mind helping me?

Having the same problem here.

ranjanbawa - May 16, 2016, 12:18 am

Thankssssssssssssssssssssss

Lundog - May 25, 2016, 7:18 am

Mine doesn't work! I sent a rat to my old laptop, but it won't show up in the user list

Creamer - May 25, 2016, 7:24 am

ok i am a total noob but what is a RAT

Lundog - May 26, 2016, 4:45 am

(May 25, 2016 07:24 AM)derpq11 Wrote: [\[CITE\]](#) ok i am a total noob but what is a RAT
Remote Administration Tool - Google and read my friend :)

Creamer - May 26, 2016, 5:51 am

(May 26, 2016 04:45 AM)Lundog Wrote: [\[CITE\]](#) Remote Administration Tool - Google and read my friend :)

i googled what is a rat and i got rats

kolariom - June 8, 2016, 2:03 pm

thank you my man ...your help is very helpful for me!!!!

timi123 - June 8, 2016, 2:04 pm

Thanks for tutorial, looks good

Dayounghacker - June 8, 2016, 3:51 pm

Link to download the DarkComet RAT please ?

Oh DoX o - June 8, 2016, 4:12 pm

I could help anybody with setting up this RAT and test your stub. Skype vizonfps

ticorwin - June 8, 2016, 6:05 pm

thank you for the great tutorial, keep up the good work

jack7076 - September 3, 2016, 10:57 pm

Thank You for this tutorial it should help out a lot of skids (ME) but thank you

SIM-2580909 - September 4, 2016, 1:10 am

Nice tut, it's a real shame Darkcomet is a bit outdated. Everyone looking at this use something like darktrack

Soldiers - September 4, 2016, 10:45 am

Nice noob friendly tutorial keep it revived.

Anxious.exe - September 5, 2016, 12:28 pm

Can people stop replying to this 2013 thread ? Darkcomet has important security flaws and shouldn't be used anymore.

TitaniumCreeper - September 5, 2016, 12:49 pm

Thank you man! Great tutorial!

giggetto94 - September 9, 2016, 11:44 am

Amazing thread and great tutorial thanks for sharing!

mackavelli - September 11, 2016, 6:11 am

This thread helped me setup my Dc it's good

synced96 - September 20, 2016, 12:45 pm

Hi could you pm a link to download dc?

peno - September 20, 2016, 2:07 pm

Love this thread! great share and thank you for your guide!

Titanxx - October 20, 2016, 8:55 am

Does darkcomet work with windows 10?

SteanerSVK - October 22, 2016, 8:58 am

Nice tutorial! I've setup the DC rat, but i have some problems. Can you send me PM please?

Stashy - October 22, 2016, 8:58 am

(Oct 22, 2016 08:58 AM)SteanerSVK Wrote: [\[CITE\]](#) Nice tutorial! I've setup the DC rat, but i have some problems. Can you send me PM please?

no he can't

as you can see op is closed

Lante - October 24, 2016, 8:03 am

No one should use DarkComet anymore, or reply to this post as OP is closed.

under_taker89 - January 15, 2017, 9:57 pm

Very food tutorial for the beginers...

Invested - January 15, 2017, 9:59 pm

Thank you for the tutorial. It has been very helpful and informative.

under_taker89 - January 15, 2017, 10:00 pm

all the links are down for the darkcomet. Can somebody provide me a working link please

minecrafter6969 - January 23, 2017, 1:17 am

very good tutorial ty for sharing

orochimaruhf - February 4, 2017, 9:33 am

good tut, thanks for sharing mate!

KillerGhost - February 6, 2017, 8:42 am

Do most AV's not catch DarkComet? i dunno, Personally id rather create a payload myself and exploit it my own way, this skid RAT shit just takes the fun out of it for me.

Ghost_worth - April 2, 2017, 2:00 am

I used to have DC a long time ago, did not get to use it though. I see a lot of people really trashing on it! Is this RAT really that terrible? Should I invest in another RAT?

Nice tutorial,

Ghost_worth

Rovakio - April 2, 2017, 2:46 pm

Is DC still a good RAT too go? Or is it getting old..

b00ked - April 3, 2017, 3:45 pm

Thanks man, great post, awesome help

barcathebest201 - April 4, 2017, 6:20 am

Good tutorial, nice layout. Very well done i must say!

MertimerBart - April 5, 2017, 3:09 am

One of the best I read so far. Thanks!

anwar212 - April 5, 2017, 2:40 pm

Thank you for the tutorial

TheOtherNoxx24 - April 20, 2017, 6:31 pm

I appreciate these tutorials

maddoc63 - April 24, 2017, 3:02 am

It is a great tutorial for me as a beginner. It helps a lot. Thank you for your good work .

Big_mp5 - February 25, 2018, 5:03 am

Great tutorial thanks for the share.

Amulet Reddo - April 19, 2025, 5:40 pm

It seems it no longer works. I literally port-forwarded both in my router and in my firewall setting (both outbound and inbound connections) and I built a stub and run it on myself but still I don't see them on my list. No firewall is on. In fact I turned even the router firewall off, the common windows firewalls, the antivirus firewalls etc. Nothing. "no-ip.biz" option no longer exists as an ending so I used something else. On DNS IPv4 setting I used my own ip.
