www.chatcoding.net

A way to communicate with other coders in live, realtime collaboration, for free! This site uses the new and modern HTML5 Web Sockets, which means (almost) realtime collaboration is possible! But for those who does not support HTML5 Web Sockets, don't worry! If HTML5 Web Sockets verification fails on your browser, we can gracefully degrade to more compatible ways of transferring data to you, such as XHR Polling, Flash Polling, AJAX Long Pooling, JSONP Polling, etc.

[img]http://www.chatcoding.net/res/files/slide1.png[/img]

The new recoded Chat Coding Script now contains the "Public Rooms" directory, in which you can see users who has problems with their script, and a +rep has also been implemented so that the reputation of a room can be voted on.

[img]http://www.chatcoding.net/res/files/slide6.png[/img]

Due to the requests of people saying that they want to allow certain unregistered people to enter their room, we have added an "Access Token" function. Which means that when you generate an access token, and give it to someone, they can access your room using the access token. They will be named as "guest#", where # represents the (auto incremented) unique id number of the token. This is how cool we are.

[img]http://www.chatcoding.net/res/files/slide3.png[/img]

If you don't like unwanted users to enter your room, we have added a password protect room function so that only your trusted partners can access the room, and with the new recoded Chat Coding script, you

code is much safer than ever due to the fact that instead of relying on just the client-side room ID, we now use tokens which can only be generated server-side.

[What do you think?](#)

Looks seriously sexy, good job & good luck.

Battlefield4 - July 20, 2013, 8:11 am

I remember when it was a .zz.mu, now its the coolest site ever

DAVEologist - July 28, 2013, 5:27 am

Thank you everyone. Keep on supporting! :)
Also, follow our FB Page! :)

The only thing I have to say is that Times New Roman is ugly, otherwise it looks great, and is a great idea! Keep it up! This could go somewhere!

Are the servers offline? I tried to create a room and all it did was load.

It's times new roman? I think I assigned Verdana if they can't load the Open Sans font. I'll try to look at it. THanks!

EDIT: The server has been restarted. :) Yay!

James Drews - August 1, 2013, 7:56 am

I like the idea, but the logo can be so much better.
No hating. I wish you all the best with this project.

How does one test the code they've entered? I made a little for loop in JavaScript, but there isn't a button to execute said code.
