iGazzy - July 23, 2013, 7:26 pm

I understand it a bit more but I am having trouble with actually finding who the person is.. When I tried just on my own IP address, it would go to my ISP. Then I used the long & lat search, it would just take me to their headquarters.

This is pretty HQ. I would suggest adding a few things Such as:

NameChk

<http://namechk.com/>

For finding what Usernames are taken.

Another good GEO Location:

<http://www.ip-tracker.org/>

That's a Really good site for GEO Location.

But Again really HQ Thread! Everyone should read!

indiandevil - October 15, 2013, 7:39 pm
