Thread: [{Tut}How to access files encrypted with SanDisk Secure Access{Tut}||Windows 7||](#)

'Cynical - July 21, 2013, 10:35 pm

Have you encrypted something with SanDisk SecureAccess but can't remember the password? Want to recover it? To do this it is really easy..

Make sure you have SanDisk SecureAccess completely closed when you do this!!!

Step 1:

Open the file Explorer and click the organize button.. Click on Folder and Search options, click on view, then make sure that you can see hidden files

Step 2:

Go to the MyVaults folder, located in the same location as RunSanDiskSecureAccess_Win.exe.

Step 3:

In the MyVaults folder go to the folder named as the same thing the vault you want to access is named.

Step 4:

Open the dmOption.xml file in Notepad or any other word processing program

Step 5:

Look for where it says DoCrypt"true" and change true to false. Now just save the file.

After all of this you will now be able to open the SanDisk protected vault without any password at all

If you have any problems just PM me.

pinkpanther71 - August 15, 2013, 1:52 pm

I'm a new member. I desperately need to know how to access my files on my SanDisk Cruzer with Secure Access. I was a small business owner and had all my important paperwork on the drive and can't remember the password I created two years ago. Could you explain if the process would be the same for Windows 8 as I see you are talking about Windows 7 in the post.

Send me a .zip with all of the sandisk files in it.. I mean the ENTIRE FOLDER, there are some hidden files in it that need to be edited to change the password to the vaults so it is very important that you send me the ENTIRE folder.

talking about Windows 7 in the post.

Also, I would recommend paying 125\$ to downgrade to windows 7.

CrimsonK - September 17, 2013, 5:50 am

I did it and now the program by-pass the password. but the files are still inaccessible. there's no file names, no extensions and they can not be opened.
could you please help.

Vaxorr - September 17, 2013, 5:58 am

good job bro keep it up and thanks for the efforts
-Null ?

monix - October 19, 2013, 6:38 am

I have the same issue. I can access the program without the password now but all the files are listed as numbers without file extensions.
what do I do???

Stefansebastian - October 25, 2013, 4:18 pm

Is someone now actually knowing how to decrypt the files? would be really important.

Aura - October 25, 2013, 4:24 pm

This thread is dead, you won't receive any updates from the OP I guess.

DTDev - December 11, 2013, 4:39 pm

I'm currently just trying to get SecureAccess to open the correct Vault.
I have two different vaults but only one is displayed. I know the password.

I used the OP's post to open and inspect most of the files but I still am unsure of how to get the App to launch with the other Vaults file instead. I still have all the original files associated in the Folder that doesn't get called at initiation of the app.

I feel like I'm close, like switching the "control #" or maybe the uid?

I really really hope the OP comes back to save me :(.

'Cynical - January 5, 2014, 2:22 pm

They patched this. Sorry guys! I can't find another way to get to the files, except actually cracking the hash in which I am incapable of doing.. Again, I am very sorry.

Reinstate - January 5, 2014, 5:02 pm

Nice guide H4X0R3L1T3. And it sucks that they patched this.

DTDev - January 6, 2014, 3:46 pm

Damn. I'm holding on to this USB drive like it's my life. I hope one day I can unencrypt it.
Blah this is depressing. I really wish sandisk would do something for me.

'Cynical - January 29, 2014, 1:44 pm

You can still get the encryption key, but I do not know how to decrypt it... Someone in the encrypting section may be able to help! :D

taurierain - October 15, 2017, 7:31 am

I don't have the RunSecureVault folder. I can't access the vault. But I do have .dat files of the files

that I kept in the Vault. Is there any way I can recover them?
