Max Keylogger allows you to record and monitor every activity happens on your computer and have it delivered to your email! Automatically stealthily record every IM chat, monitor every website visited and control it all so easily.

No other PC monitor software gives you the security of knowing you'll be able to collect every screenshot and every keystroke with just the click of a button.

Every keystroke from popular chat, online email and social sites is recorded. Including Myspace, Facebook, Twitter, ICQ, Yahoo Messenger, MSN Messenger, AIM, Skype and any more other programs.

Do you happen to have a scan to prove that the file is clean? It'd definitely help others to be more encouraged to download this. :)

VisionToAspire - July 23, 2013, 4:54 pm

Also if anyone helped with this you gotta give em Credit. But i find this an lffy Post, Mainly cause there is no screenshots, No Scan and no actual proof.
