Thread: [Get someones IP: Two Ways](#)

dubwub123 - July 23, 2013, 8:39 am

You may have seen websites/tutorials like this, and if you did do not say that this is old because some new people here would like to know. So if you want to get someones IP address there are two ways for that.

1st Method:

Ask someone for their Skype. When they give it to you, simply go on <http://www.grabthatip.com> and type their Skype name in. Wait a minute or two and it will show their IP address. However, this resolver sometimes might say occasionally that the IP could not be resolved because of blah blah. You have to be lucky ?

2nd Method:

This is my favorite method because it works everytime. Here is what you do:

Go to <http://www.#.tk>

Type a URL into the box, such as a YouTube link and press "Create URL"

The website will give you a special URL that redirects the person to the URL you put in. It may look something like "#.tk/xxxxxx" However, the victim might not click the link because, well would you click a link from a website you never heard of to redirect you to a page? ? So you

Go on <http://www.adf.ly> or <http://www.bit.ly> [WARNING: potentially infected] to shorten the link that the # website gave you. When the victim clicks on the shortened link, # will record their IP address into a log (explained in a moment) and it will redirect them to the original URL you gave them.

In the end you have the victims IP and they have no clue

Now how do you see their IP? Heres what you do:

When you create the URL, # will give you a set of instructions. They will give you a URL that you are supposed to put into adfly or bitly and a tracking code. SAVE THE TRACKING CODE The tracking code is crucial to the process because you can see the victims IP address. When the person clicks on the link, you go to <http://#.tk> and type the tracking code in. Press the "Track URL" or something like that and it will redirect you to a page where you can see the victims IP.

And now you have fun teasing them, DOSing them, or threatening to sell their IP online in exchange for cookies ?

3rd method - WireShark bro :)

P.S: Nice Thread :)

RushOnTheBase - July 23, 2013, 6:38 pm

4.o method CommView . It is simpliest

Zap~ - July 23, 2013, 6:41 pm

I think making your own PHP script would be a lot easier.

w3areanonymous - July 24, 2013, 12:34 pm

simple there is actually more ways CMD , Getting someones ip with a picture and so on.
?
