Thread: [\[EASY\]~How to Bind Files~\[FAST\]](#)

P?r?more - April 12, 2010, 4:27 pm

Binding General Info

Ok, this is my first tut and a tut for the new beginners. So you finally got your server ready, whether a RAT, keylogger, stealer, etc. Now you read some spreading tutorials. But you still aren't getting any downloads. The solution to that is BINDING.

Now, what binding is, is combining two files, or more, into one single file, that when executed, executes all files binded. So most people use this with fake programs. Like a fake keygen, game hack, money hack, or shit like that. It makes your virus seem more legit, so people that download your file won't automatically know it is a virus.

Binding the Actual Files

So, to bind your files you need 3 things

- your server(s)
- your "legit" program
- a binder

Now I cannot provide you with your virus, but I can provide you the other 2.

Finding Your "Legit" Program

Now this program can be either a random fake program, or it can actually be the real thing. You decide. Real programs are safer to go with, but its easier to get people to download fake programs, since they usually offer things real programs cannot.

If you want to bind it with a real file, go find it yourself.

If you want fake programs, there are a TON on hackforums. Here's a thread with 140+, which should be more than enough.

<https://hackforums.net/showthread.php?tid=335596>

Binding the Files

This is probably the easiest part yet. So first you need a binder. I highly suggest this free and FUD one:

<https://hackforums.net/showthread.php?tid=300953>

If you don't want a \$harecash download, go find another binder yourself.

After you download the binder, select your two files in the file boxes. After that, Click "Bind Them!", and whala! You are done binding your files.

When this binded file is executed, both your server and your "legit" program will open. This helps

your spreading. A LOT. Trust me. To go even further, I highly suggest crypting it. But that is not included in this tut. See ya!

65 views and not a single comment....

hyperstream - April 14, 2010, 9:33 pm

Hey mate, id say its helped a few people. they prolly left their thanks on the 'binder' thread.

Lazy bums! - How ever this helped me - thanks mate.

I definatly suggest crypting it :P

SLAPYA - April 14, 2010, 9:41 pm

nice !

IP-Killer - April 29, 2010, 4:08 pm

cool thanks for the tut

WhiteFlame - April 29, 2010, 4:11 pm

Nice tutorial. I am sure this will help a few people out.

BluntManKoD - April 29, 2010, 4:29 pm

thanks bro this is just what I was looking. I didn't know if you could bind lets say a keylogger with real program cause thats what I wanted to do. I thought it had to be a fake cause thats what I hear everyone else talking about. Thanks a bunch bro now I can spread a lot easier.

P?r?more - April 29, 2010, 4:33 pm

np, wow, I thought this thread was dead. Lol, thx for whoever just posted a comment to keep this alive!

Nightmareinhell - April 29, 2010, 6:44 pm

Thanks man! Much appreciated!

-mothered- - April 29, 2010, 8:31 pm

Yeah, now this Is a good tut, particularly for those who are new to this field. In my opinion, It's well written, easy to follow, and elaborated with supported links.

Keep up the good work mate :)

P?r?more - April 30, 2010, 4:07 am

thanks for the comment!

aticouni - April 30, 2010, 4:58 am

Thanks. This will help me to spread !

P?r?more - April 30, 2010, 6:29 pm

no problem.

Spoiler ([Click to View](#))

LiamX - August 23, 2011, 9:06 am

Nice but can i bind it with .jpg .png, picture files etc?

suleman - August 24, 2011, 3:50 am

you wrote this tutorial in very easy words and every one can understand it. thanks for sharing

Maximilian23 - August 29, 2011, 12:56 pm

Thanks! I know the thread is Dead but i guess just saying thanks will be fine :D

hamradiomobile - August 29, 2011, 2:11 pm

great great tut really helped me a lot! thanks! :)

tomz - September 27, 2011, 11:03 pm

Please I wana be a hacker..PLs Send me the TUorial..Please please please.pleas...wil b realy greatful to u :)

thiefisalone - September 28, 2011, 12:57 am

Hey mate, id say its helped a few people. they proly left their thanks on the 'binder' thread.

can i bind server file with a mp3 or flv file. i succeeded in binding but while crypting it leaves an exe file whose icon cannot be changed + the extention remains exe . i want to crypt my mp3 file which is binded with my server file so that the antivirus does not detects it + the person can play the song = Success in getting information.. plz help...

jaswant.jasonx - September 28, 2011, 5:37 am

thankyou.... but binding with DOS is even easier.. you just have to enter code

`COPY<space> /B <space> file.jpeg(or mp3 or any) <space> server.exe(your virus) <space> filenameyouwant.jpeg(or any format)`

But i am downloading you binder.. ooo

zerobrain - September 29, 2011, 3:12 am

aman2012 - September 29, 2011, 9:25 pm

great job nice tutorial hope this binder method work for me ...thanx

Nixus606 - September 30, 2011, 8:50 am

Thanks for the share bro :) bookmarked!

Keep it up.

Crazy Ralph - August 18, 2012, 12:14 am

cool, thanks for explaining the basics of binding to me. it helped.

picknpwn - August 18, 2012, 2:15 am

Thanks man! Much appreciated!

35 Characters.

fifflan - August 18, 2012, 10:59 am

Nice tutorial. I am sure this will help a few people out. so keep it up!

RyderG - August 18, 2012, 11:57 am

this helped! I'm very new to this forum and all these tuts are amazing!

Tony201 - *August 18, 2012, 1:49 pm*

this was brought back from the dead but still nice tut

nasschaf - *May 20, 2015, 6:32 am*

thank u, nice tuto it's helpful

thank u Paramore but the binder you suggest isn't available for downloading :(
