Thread: [Free Wifi at Airports!](#)

dubwub123 - July 31, 2013, 2:58 pm

If you are at an airport and there is unprotected wifi, click on it. If it redirects you a page to sign in to the airport or some shit, then exit. HOWEVER if it says you are connected, do not go on the internet because it will redirect you to a webpage to sign in, but go to iMessage and text somebody, and the text should go through.

Hope it works ?

Spoof your MAC to somebody's who is already connected to Wifi(tips: airodump-ng, macchanger)

but if that someone has been on HackForums or knows their way around a computer, then you are screwed.

yacked2 - July 31, 2013, 3:30 pm

Hmm why ? Use SSH tunnel, or VPN to crypt your packets and that's it.

Nope. You're wrong. HF users are too lame and nerdy to be at the airport including me :P
