Thread: [{USB KEYLOGGERS}-WiFi Capable, hidden, small-\[REDUCED PRICES\]-\(vouch copies\)](#)

dperry240 - August 1, 2013, 8:44 am

Hello Hackforums,

Today I am here to present to you a revolutionary new keylogger. The difference is that this one does not need to be crypted, works on any computer with a usb keyboard, and will not disrupt the computer in any way. I bring you the Keygrabber USB keyloggers. With this new tool you will be able to easily keylog someone just by connecting the keygrabber between the USB keyboard and the computer. It is that simple. Don't feel like checking on the keylogger constantly? Check out our WiFi keyloggers that harness the power of wifi to send you updated logs via email. I am a rep for this company and am here to bring you discounted prices. I will be taking 10% off the products price. Feel free to check out our website at keelog.com to view our products.

Features

- Small
- Hidden
- WiFi capable
- Easy to use
- No crypting
- undetectable
- Works on all computers with USB keyboard

In all seriousness guys, these things are really cool, small, and easy to use. These also function as a USB flash drive. I can get you them for 10% off. Feel free to use a trusted middle man. I am currently working on getting a thread design. Thanks for looking!

In order to purchase please PM your paypal email, and the product you want. I will send you an invoice of the product with 10 percent off.
