Thread: [Python IRC Botnet Source!](#)

WealthyHustler - August 2, 2013, 3:24 pm

I don't know what I was thinking when I tried learning python for CODING MALWARE but I did it. What I did was fix up this broken botnet's networking. I did troubleshooting.. I'm not that much of a coder but this could come useful for someone. Python is however usually a scripting language so I wouldn't recommend this.

How to make it an exe:

What I did was just install pyinstaller and then I would do
"python pyinstaller.py botnet.py --onefile --noconsole"

Bot Features:

IRC Botnet

Registry Persistence (added by me)

Commands:

!leave

!quit

!run <path to file>

!info

!download <url> <filename> #downloads and executes

!moreinfo

!name

!version

Don't beat yourself up for learning python lul it is a strong flexible language that can be used to do lots of thing rather than just writing malware. If you would like to learn some unethical python add my Skype oarthadox and I have a nice ebook for you.

Interesting, the code is simple and beautiful (of course, it is python :D)

Thanks for sharing the code, maybe i will use it to learn more
