Thread: [vb6 generators](#)

Neroxan - April 14, 2010, 5:32 am

If youve got a crypter that youve programmed and would like an easy method to making unique stubs for it for selling copies of the crypter then a stub generator will help you greatly.

All I need to make you a generator such as that would be you stub source. (no builder/crypter files needed)

I charge \$80 bucks for the service but if youve got a simple project then Id likely take less.

I can also make generators for about anything... If youd like to add an external feature into a binder or something (such as a usb spreader) then I could make a generator that makes a unique usb spreader for you to incorporate into your binder, and with those 2 methods (using an external file for the spreader instead of code, and then binding that file) your usb spreading method wont be detected as fast (if ever detected)

Pm for offers.

Neroxan - May 26, 2010, 12:08 am

Bump. I still do this service.

As of now I can do options for

~Multiple forms of fake functions(if statements, open fake files, + about 12 more different functions that dont really do anything)

~Multiple Junk forms~(simple goto's, declare variables/strings, booleans = about 15 more junk types to choose from)

~Add Fake Modules/class modules(either with junk code or empty)

~5 total encryption types to encrypt stubs/code with (does the whole source with 1 click, ascii, str reverse, xor, rc4, rotX)

~replace strings with randoms

~Random module/class/form names

~File changer & compiler (sets file info such as exe name, company, version info etc..., Options for cmd line compiler native code or p-code & all vb6 optimization options)

And Ive got a way I could probably scramble all functions with as well.

Point is, for a cheap price you can get a stub generator built for your code/stub and there isnt a better person on this forum to do it for you?

Maybe posting proof images of your services may help your sales :')

RUS7Y - May 26, 2010, 2:57 am

I know his skills, good luck bro ?

well atm, I dont have many pics to offer as Ive been making them for my own code and very close

friends only. Ill try to find some of my older ones to take screenshots of to display though.
