Thread: [VirtuLayer](#) | [Bulletproof KVM VPS](#) | [Spoof](#) | [Malware](#) | [Botnets](#) | [Host Almost Anything](#)

regexks_ - August 5, 2013, 1:20 am

<http://virtulayer.net>

VirtuLayer strives to provide the absolute best VPS experience on the market. Our nodes are virtualized using KVM to get entirely hardware-based virtualization. KVM containers run completely separate from the rest of the system with entirely dedicated resources (CPU, HDD, RAM, uplink) and, unlike OpenVZ, cannot be oversold. This gives the end user the illusion of a dedicated server without the drawbacks of standard VPS. You get full root access to every part of your server: even kernel settings are yours to change.

On top of having some of the most kick ass VPS on the market, the networks we host on are extremely abuse friendly. They will ignore abuse reports and so will we. VirtuLayer will try their absolute hardest to avoid ever having to suspend your server due to complaints. If it ever comes down to it, you will receive a prorated refund based on time used and if your infrastructure is entirely affected, you will receive a refund IN FULL. That day has yet to come.

The only rules we have are on what we don't allow: child pornography, bestiality and any abuse that negatively affects our hardware. If you are caught engaging in any of these activities you will be fucked. WE MEAN IT.

Receiving DDoS is also not allowed. If you're hit with an attack we will work with you to try and restore your service but if you're a magnet for attacks you will be suspended indefinitely. Don't make yourself a target.

Our servers are hosted on nodes that have spoofing enabled. That means you can DDoS with your favorite spoofed scripts or engage in whatever fun you can find in spoofing.

With a shitty list this thing was pushing over 760 megabits.

Each VPS is allowed to use the node's full 1000 Mbit connection (albeit bursted) and abusing that will mean we will drop the rate limit hammer on your ass and keep you well below a speed where you can't generate any problems for our other customers. Rate limits are implemented on each VPS at 30000 packets per second. This limit cannot and will not be lifted so don't ask.

Every VPS comes with logins to our SolusVM panel for full control over the VPS and on-the-fly reboots, reinstalls, root password changes and more: the whole fuckin' she-bang. You'll be controlling your server like some kind of internet wizard.

We've got automatic provisioning and our admins are standing by waiting for you! Oh, and most of the registration fields are optional: you can figure out which ones aren't on your own.

<http://virtulayer.net>

Liam™ - August 5, 2013, 1:21 am

Vouch for regexks amazing servers and looks like great product.

addicted™ - August 5, 2013, 1:22 am

Vouch for Regexks knows exactly what he is doing.

+Pirate - August 5, 2013, 3:26 am

Seems like a great product which would definitely be useful.

Good luck! I know you're always great at these.

Budweiser- - August 5, 2013, 3:41 am

Huge Vouch For Rege. I've been pestering him with questions and he never fails to disappoint. He has a huge mindset and can vouch on my account that this product won't disappoint

N?II - August 5, 2013, 3:42 am

Alright, just bought a VPS.
Fast easy setup.

Thanks, I'll be using this service for quite some time.

My vouch.

Fredo Santana - August 5, 2013, 4:10 am

Damn all the other posts got removed Moist made me laugh :p

Anyways GLWS i wish i could get one :p night buy one soon!!

Nautica. - August 5, 2013, 8:00 pm

Dang.
Seems like it's legit.
I'll be buying soon. :l

regexks_ - August 5, 2013, 10:13 pm

I see we're getting popular. The prices may not stay this low for long!

| ZooT | - August 5, 2013, 11:49 pm

Just so you know, KVM CAN be oversold. Can you post the results of this for me please:

```
dd if=/dev/zero of=test bs=64k count=16k conv=fdatasync
```

Also, looking at your site, it says you use RAID10 with 2 disks?

"2x 1TB 7200 RPM RAID 10"

regexks_ - August 5, 2013, 11:59 pm

(Aug 5, 2013 11:49 PM)| ZooT | Wrote: [CITE](#) Just so you know, KVM CAN be oversold. Can you post the results of this for me please:

```
dd if=/dev/zero of=test bs=64k count=16k conv=fdatasync
```

Also, looking at your site, it says you use RAID10 with 2 disks. Can you explain that please?

"2x 1TB 7200 RPM RAID 10"

From a technical standpoint, overselling guaranteed memory and CPU time is stupid because as soon as you oversell the VPS you will have huge stability problems on the nodes. It isn't fair use like OpenVZ.

And RAID 10 requires 4 drives but since we are using 2 drives for each set of RAID 1 it is the equivalent of 2 drives only due to the striping.

| **ZooT** | - August 6, 2013, 12:04 am

It is possible though, unlike what your thread says in bold text.

Can you post the dd test please.

regexks_ - August 6, 2013, 12:06 am

(Aug 6, 2013 12:04 AM)| ZooT | Wrote: [\[CITE\]](#) It is possible though, unlike what your thread says in bold text.

Can you post the dd test please.

It's possible with problems no matter how little you oversell but if overselling was the intention OpenVZ would have been a much better choice.

Sure:

```
Code root@ns1:/etc/bind# dd if=/dev/zero of=test bs=64k count=16k conv=fdatasync
16384+0 records in
16384+0 records out
1073741824 bytes (1.1 GB) copied, 13.26 s, 81.0 MB/s
```

| **ZooT** | - August 6, 2013, 12:12 am

16384+0 records in
16384+0 records out
1073741824 bytes (1.1 GB) copied, 13.26 s, 81.0 MB/s
Is that run off the hostnode or from a container?
```

regexks_ - August 6, 2013, 12:44 am

(Aug 6, 2013 12:12 AM)| ZooT | Wrote: [\[CITE\]](#) Is that run off the hostnode or from a container?
From within a container that I'm using as a special name server!

Linux. - August 6, 2013, 1:08 am

Not bad, perfect for my site. Thanks man.

Genocide. - August 6, 2013, 1:54 am

Just saying, I'm going to be buying this pretty soon. Looks nice.

regexks_ - August 6, 2013, 2:30 am

(Aug 6, 2013 01:54 AM)Genocide. Wrote: [\[CITE\]](#) Just saying, I'm going to be buying this pretty soon. Looks nice.

Thanks for the support!

I've gotten a few odd requests for services and I have yet to deny any. Remember, we guarantee your service for the entire month, every month.

Repentant - August 6, 2013, 2:40 pm

Do you offer Unmetered BW on any plans?

regexks_ - August 6, 2013, 2:59 pm

(Aug 6, 2013 02:40 PM)#Reaper Wrote: [\[CITE\]](#) Do you offer Unmetered BW on any plans?

We can offer unmetered bandwidth but do note the hard limits on transfer rates when it comes to packets per second. This hard limit has been implemented to keep the node stable since the primary reason people will be buying these VPS is for DDoS.

Kraxas - August 7, 2013, 4:50 am

So botnets Are allowed? I'll buy for sure soon as soon as i come back home from holiday :) good luck man!

regexks_ - August 8, 2013, 12:25 pm

All support tickets have been answered and any issues resolved successfully.

Servers have been getting extremely popular :)

For an extra \$29.99 you can have your port upgraded to unmetered 100Mbit (guaranteed). Inquire now!

Liam™ - August 9, 2013, 5:12 am

Just purchased waiting for support now.

regexks_ - August 9, 2013, 11:00 am

(Aug 9, 2013 05:12 AM)Liam™ Wrote: [\[CITE\]](#) Just purchased waiting for support now. Everything sorted!

Only 3 left in stock.

SuchPro - August 11, 2013, 4:50 pm

Really good connection. I see Ecatel is not rate-limiting it :)

Good Luck with Sales

Liam™ - August 11, 2013, 5:06 pm

These are amazing :) best servers btw one only pro about.vouch vouch.

Genocide. - August 11, 2013, 10:11 pm

If you do an unmetered plan and we pay \$29.99 for 100Mbit port guaranteed will it get limited by packets per second?

regexks_ - August 11, 2013, 10:35 pm

(Aug 11, 2013 10:11 PM)Genocide. Wrote: [\[CITE\]](#) If you do an unmetered plan and we pay \$29.99 for 100Mbit port guaranteed will it get limited by packets per second?

To 150K or 100Mbit, whichever comes first.

Big Easy - August 12, 2013, 8:39 am

I'm vouching for the original poster, he definitely knows what he is doing.

regexks_ - August 14, 2013, 7:52 am

I have restocked on IPv4. We now have an available stock of over 35 VPS!

Krieg - August 15, 2013, 2:51 pm

This is a great service. Unlike some people I'm using it as a cheap legitimate host for some projects of mine :)

regexks_ - August 16, 2013, 10:42 am

The servers are extremely fast. I can offer trial periods of 24 hours for customers looking into a purchase.

(\$LOOP) - August 16, 2013, 3:28 pm

I'm interested in purchasing. Could I get a 24 hour trial to see?

Liam™ - August 21, 2013, 6:17 am

etsoberano - August 21, 2013, 8:44 am

Anyone can load the site, i cant...

| ZooT | - August 21, 2013, 11:04 am

Looks like his account was stolen, which means his VPS CP login might have been too. :/

mymomthinksimawesome - August 27, 2013, 1:07 pm

why are you advertising 1000 mb port?

You host these VPS's off your 100 mbps ec2. ._.

~Tom~ - August 27, 2013, 1:08 pm

(Aug 21, 2013 11:04 AM)| ZooT | Wrote: [\[CITE\]](#) Looks like his account was stolen, which means his VPS CP login might have been too. :/

His account wasn't stolen, he was on teamspeak just after he got banned.

VENETX - August 28, 2013, 11:02 am

(Aug 27, 2013 01:08 PM)~Tom~ Wrote: [\[CITE\]](#) His account wasn't stolen, he was on teamspeak just after he got banned.

Why did he get banned?

Just wondering.
