Thread: [Automated Anti Forensics Scripts](#)

SIM-5561 - August 5, 2013, 3:11 am

For those of you who have seen Saurfang's anti-forensics thread, click [here](#) I have created a script to automate the whole process. The only thing it doesn't do, is encrypt your drive with trucrypt, but i'm sure you can figure that one out ?

Instructions are in the .rar file.

password is: puzzle9hf

click [here](#) to download.

Hope you like.
Puzzle9

EDIT: Take a backup of your registry before doing this. Also, I wouldn't do this on your main PC. On a virtual machine for testing purposes only. Disclaimer is included in the files.

urez - August 5, 2013, 3:29 am

fbi has master key to truecrypt now
what language is it in?

SIM-5561 - August 5, 2013, 3:35 am

batch and reg. You may get an error message but i've just checked again and it does work 100% on my machine.

Lol, implying there is a master key for TrueCrypt (Protip: There isn't).

Also, vouch for this user. His scripts are legit and he has my permission to post this.

dremra - August 10, 2013, 3:04 pm

Thank you for this great work!!It is very useful!!

SIM-5561 - August 11, 2013, 3:48 am

Thanks dremra, let me know if it worked for you.

Wheelchair23 - August 11, 2013, 4:01 am

Nice tool, thanks for sharing it. Works really well.

The Judge's Bitch - August 11, 2013, 2:34 pm

Looks like a good script if it's Saurfang approved! Will give it a try later, thanks for posting.

SIM-5561 - August 12, 2013, 8:53 am

BTW: This script was for XP. Not Windows 7. Just thought i'd say because I got a few PM's.

Tuppensomfan - August 12, 2013, 10:37 am

Sry, im just here to get my 10 posts

Tromboner - August 25, 2013, 9:27 pm

Not to sound like a jerk here, but can you please make the process available for other Windows Systems? And could you run the programs in XP mode theoretically?

(Ik how hard making software is, and how hard making a computer do what you want is, I have been learning programming, and it has just been a pain in the ass with errors, with the successes being huge, and the downfalls being just plain overwhelming. Just making sure you understood that i wasn't being a greedy little fool. :D)

SIM-5561 - August 26, 2013, 1:14 am

Hey bro what OS do you want this to work for? Windows 7? Let me know :)

SHADOW REALM - August 26, 2013, 1:17 am

Windows 7 would be nice, Just don't make a Vista one. If someone is using vista then the FBI should arrest them lel

Haha agreed. Will update to Win7 soon as I get a few mins ?

ca1n - September 26, 2013, 8:29 am

just wondering if this was already updated to Win7?

METALSLUG - September 26, 2013, 8:58 am

cheers man! hopefully this will work :D

SIM-5561 - September 26, 2013, 9:10 am

Hey guys this is for XP only. I haven't had time to test/update to Win7. I don't know when/if I'll get the time. If anyone wants to update the script feel free.

oiyoubum1212 - September 26, 2013, 10:19 am

Just tested it, amazing i say :) and by the way its for windows XP not windows 7 just letting you all know

†?L†™ - November 5, 2013, 3:27 am

Would be awesome if I could get a windows 7 version of this. Please let my know when you make it <3 looks absolutely amazing.

Goodies - November 21, 2013, 1:45 am

OP hear me out. This would be an awesome metasploit post module or meterpreter script.

I might make that (five you credit ofc ill just change it to ruby)

SIM-5561 - November 21, 2013, 11:03 am

That'd be awesome. If you end up doing that, let me know so I can give it a whirl ?

Osiris1717 - November 24, 2013, 5:49 am

Hey, thank-you for this but I am on Windows-Seven I will be back soon to check-on your progress.

mykil - January 20, 2014, 1:10 pm

please add to the OP what your script actually does and changes...

that would be a great help

cheers

In the OP I link to Saurfang's thread. This script does everything in his thread pretty much. It does state that in the OP.
