About

Hello HF, Today I present to you one of the most amazing things you will ever see. This here is "Project Blackout" a HUGE Auto-Spreader. It is 100% free to use. You can double or even triple your botnet with this program. This is highly advanced and professional software. Credits to PCquad for wormy source. I have seen it before my own eyes and so have many other members. You may NOT re-sell it in anyway, shape or form. If caught, you will be directly reported to a staff member. NO EXCEPTIONS - THIS IS FREE SOFTWARE.

Whats new in V2.5?

Tones of new and improved options

Overall better, highly recommended update

BotKiller Beta - Still needs a LOT of work but I'm working on it! (Atm DDoSeR 3.6 and 3.4 works, others haven't tested)

Encryption - Secure your server and the entered info

Email Auto-Spread - Should be working. But please note that it takes an hour to do a routine as its a big job to mass email spam

Antis - New antis, improved antis etc. Secure your server from all the newest antivirus's and sniffers

Disable AntiVirus updates (Improved) - Victims will no longer be able to update their antivirus once ran

Add to startup - Now working in XP, Vista and 7 32-bit and 64-bit!

FUD (Fully Undetectable) - Note that in general its hard to keep it FUD due to all the strings and users, but I will try my best to update it.

Features:

Project Blackout V2.5 is made to spread your botnet, but it works on every .exe on the internet!

Yes, this means: Keyloggers, RATS, Crypted files and much,much, more!

Automatically Download and Execute your bot on run

Add to Startup with UAC bypass

Mass Email Spread (This is why gmail username and password is required)

Infect all HTML documents

Antis

Anti Bot-Killer - Makes your bot more secure by making sure it doesn't get bot killed!

MSN Spread Sends message to all online contacts getting them to download and run your virus

LAN Spread This one is seriously amazing

P2P Spread - Limewire, eDonkey and much, much more Amazing, just plain amazing. When you have over 100+ bots all hosting your virus on limewire you will be getting a fuckload of zombies

Skype spread Send message to all online contacts getting them to download your virus

USB Spread Its your basic, everyday, 100% working and stable USB auto-sperad

Unique [mutex](#). This way your bot is unique, and other bots do not copy over yours*

Proof

[img]http://img255.imageshack.us/img255/4944/captureay.png[/img]

The power of Project Blackout. Over 130 new bots in 15 minutes.

Note that 98% of the those were from the LAN spread, but now that I have 650 zombies mass-emailing and P2P spreading for me (ofc USB too) I will get much more here and their. So now I don't even Spread. Project blackout spreads for me. *EDIT: NOW I HAVE OVER 700 5-14-2010: Average Online is 1.2k

FAQs

Q. OMFG! I NOT GET NEW BAWT!

A. Its not instant. And you need to download and execute it on all your bots.

Q. What the fuck is application list?

A. The list of applications to spread as in P2P networks. Their are 100 default ones built in. Here is an example of a list:

Quote:Program1.exe

Program2.exe

Miley_Cyrus_NUDE.scr

ACDC.mp3.exe

Q. What the fuck is an email list?

A. List of emails to spread to. Example:

Quote:Example1@live.com

Example2@live.com

Example3@gmail.com

Q. Where can I find a email and/or P2P Spreading list?

A. Search for one. DO NOT PM ME!

Q. Is it FUD?

A. Only detected by avira. It bypasses UAC on Vista/7

Q. Where can I get a direct link for my server?

A. www.dropbox.com

what i dont get is the builder has no customization settings right well he shows scan results showing the files are 100% FUD but he says the spreader that infects the .exe is detected by "some av" yet the results are fud'd..??

Its not wormy auto-spreader. That one is way different. I found this one when I was decompiling hackers bots on youtube. One of them was a mediafire download, and when I clicked it, it said "View <username> public files"

I clicked that and BAM...I found this. Its pretty amazing source tbh.

This is NOT wormy. It has nothing to do with Wormy. It has nothing to do with worm hole spreader, either. Its totally different as far as I can tell. Me and boomer are keeping this source private (to us) =)

Please note that the user who had this on his mediafire didn't even obfuscate his steam stealer, so I decompiled it and jacked his gmail.

From what I can see they no longer do the fail proof survey. So good luck downloading from that shitty site without premium account or giving out credit card info for some sort of offer.

Breezy - April 14, 2010, 8:01 pm

ye fuck.. i spent like 10-20 mins trying this shit.. i CANNOT do it, no matter what i try. Fail proof surveys are gone :/ FML i really wanted this...

Napalm of Dildonia - April 14, 2010, 8:03 pm

Thanks, I'll try it out later this week.

ShareCa\$h isn't bad, I mean, pick a stupid quiz like "What kind of monster are you" and mark random shit and use a fake address. I just did that and it took less than 5 minutes for me to get the file.

South Park - April 14, 2010, 8:03 pm

2 downloads so far. Sharecash isn't impossible. Not even close to that. I recommend the surveys like "Win a free \$500 gift card" or some shit - those are the easiest.

And before any of you start flaming saying sharecash is against the rules, please see [this](#) thread.

My life says that this source is not wormy, that poison spreader or your worm hole spreader. I don't even think this was ever sold, or ever ON HF. This is mostly in a different language, as the mass email send message wasn't in English. Had to do a lot of modding. I don't understand what you're problem is though.

Anyways, can you leave me alone? Your ignorance has gotten on me and many other members nerves.

If you could please send me some kind of mirror, MOD3Rn H4X3R, I would appreciate it so much. I know you said now to ask for a mirror.. but I can't get sharecash to work. It must be something about where I live or something ._.

If you have access to several wifi networks you could get into a machine connected to one of the networks and set up an IRC server on it remotely. Alternatively you could look into investing in a "Booter" which is just a graphical control interface for a bots that are connecting directly to you.

Guys, I found out who made this. It was pcquad. This source is actually public (if you look hard enough). Its not wormy or worm hole spreader ofc.

All credits to pcquad. I only modified his source and made a builder.

Can't believe I missed it the first time, it was under form1.

Phucked-Up - April 15, 2010, 12:50 pm

Hmmm, i'd be carful, i just leaked this source and it does have a irc bot attached to it.

The IRC bot was removed (IRC.vb, and I removed all the commands/functions under form1_load)

If you don't believe me, download virtualbox, get wireshark and go at it.

Indeed very close to ours. I am wanting to have this reviewed by staff... The only way I'm not reporting this to staff is if I can see physical evidence this is in no way relevant to my code...

1. The double mutex feature is something that's extremely, EXTREMELY relevant to Poison auto-spreader code. And not to burn sequence but I'm sure he is using my mutex code for his spreader (still, but its not a problem and that's not the point and I'm also PERFECTLY fine with that). But also the chances of Modern Haxor finding this off a youtube url on some random mediafire is HIGHLY HIGHLY HIGHLY implausible especially that he found the source...

Hey man, its PCQUAds source 100%. I made a builder for it and changed some things here and their. I did remove the IRC function though ofc. And I re-uploaded the email extractor and stub on my personal host so mass email spread and infect .exe's works. This is NOT your code, I don't even have it.

to get shit case survey to work just click on the regular download then wait about 1 to 2 minuntes then cilck still not unlocking and keep clicking it back and fourth till you see a survey that says get free ipod then fill it out and click still not unlocking and it should bring you back and start downloading

my favorite thing about share-cash is how people scream over and over that it dosent work, my thing is were hackers. To my understanding we all have above average computer skills along with above average i.q`s at the very least and your telling me you cant get a download to unlock, even if your not in the country use hotspot shield ive used it even in the us as a test for myself to see if it was true.

the point of my post is share-cash is a beautiful its the reason you can find a fud crypter, or a autospreader because we want a few \$ for our hard work and we want to release it and give it

because its sompthing we just enjoy we enjoy the feeling of working our ass off on sompthing then saying here and smileing, idk if its the same for everyone. selling and giving feel different selling the person feels a entitlement to the project giving. giving it you feel a real sense of thanks from the person.

when you bitch about us using share-cash you ruin us ever wanting to give things away, because you make us feel like your entitled to it you make us feel like we should have just sold it.

please dont bitch about share-cash, if your download wont unlock after a real try then message the person releasing it and give them a dollar and say thanks, 9-10 times tho if you just msg him and say hey im havin a hell of a time with your sharecash could i still get the link, and take a screenshot of you trying, i know myself i would be happy to give someone the link.

and to the guy with 132 posts fuck you, that was my first response but this isint directed to anyone. But this is worth bumping the thread and worth someone reading to understand how we feel about giving stuff away, and the reason you should be fuckin happy that your not paying 8 \$ i say 8 cause on the low end im sure he could get 8 for it.

you want to know the reason we use this on crypters and stubs, ?? its so the "hackers" that cant get threw a sharecash are the ones who let there av trip on crypted files, and who scan on virus tottal. we dont use sharecash cause we want \$ if we wanted money we would sell the program.

this concludes my rant and i say all of the above with love, and i usualy dont post alot as you can tell not even 80 posts but you can tell when i speak i mean sompthing with it, look at my post to rep ratio i make 8 posts for every 1 rep to the guy with 132 posts your posts are watered and useless note the 0 rep not that rep means anything but the point of this forum is not to have a big post number its about quality. I hope someone reads this the next time they want to bitch about sharecash and i hope i made clear what i was trying so hard for people to understand.

Yep, remember to make the URL a DIRECT-DOWNLOAD link though. Then do download and execute (or update, but if you do update then you will loose some bots ofc) and just sit back and watch your bot count go up. The more bots you have the better, but just 1 can turn into 2 in a hour. Then you can keep going up, up and up.

OMFG just hit 700 bots. I had 592 30 minutes ago and I haven't done any spreading =)

I never sent myself brand new installs.

Thats right after I ran the auto-spreader on all my bots.

You haven't even tried this auto-spreader, so how do you know how good or bad it is? You don't.
GTFO my thread.

witchitized - April 18, 2010, 12:31 pm

I'm not dissing the spreder at all. I didn't say if its good or bad, I'm pretty sure its decent.
Isn't it off WormHole source?

Anyways, I'm just saying that SS doesn't look very reliable since you're getting pretty much 1 bot every second.

Looks more like you sent yourself installs to your bot and then ss'd it, rather than it being wormy spreder working.

Anyways, I know this is a good spreder, but you should maybe make a video of you sending the spreder to 500 bots then getting new connections ;)

[\[img\]http://img34.imageshack.us/img34/6008/capturekvs.png\[/img\]](#)

Whats new?

Tones of new and improved options

Better GUI

.NET 2.0 required instead of 3.5 MORE VICTIMS

Overall better, optimized code NO MORE CRASHES

100% Fully Undetectable, Scantime/Runtime

The best Auto-Spreader on hackforums, yes its free!

Get contacts of victim and mass spam them!

Custom Email and P2P Spread

Custom build settings

Notes:

P2P Auto-Spread still works without an app list, but its recommended as without one it only spreads with about 50 item names (the more you have, the better)

This program is for educational and informational purposes only (ex: learning more about security on YOUR network, testing security products, etc. I'm not reasonable for how you use it!)

Also, The LAN spread doesn't work 100%. Most routers have it patched. How it works is it puts the virus in the shared folder on the network (such as the homegroup).

The LAN spread works by copying it to all network shared files.

And the mass email spreader sends the emails as the spoofed address, not your normal gmail or whatever you're using.

Run it on one bot.
Why wouldn't it be working? Make sure your URL is a direct link. Its not like you gotta forward a port.

Then there is no reason why it shouldn't work unless you ran it previously.

Under Form1_load a webclient downloads on the .exe (in URL) and saves it in
C:\Windows\system32\svchost001.exe

Then it calls on the svchost001.exe by doing process.start("c:\windows\system32\svchost001.exe"

So what you want to do is go to CMD and type in the following WITHOUT Quotes

"del C:\Windows\system32\svchost001.exe"

No, their on my offshore dedicated bulletproof hosting.

After I setup a new botnet I'm going to make my own SMTP email server (which can send an unlimited amount of emails) and mass-spread to over 1 million emails and adds fresh emails every few seconds (By using a bot to search the internet for emails and update the .txt on my FTP account).

It will auto-get the contacts saved on the PC and mass-spread to them with your message.

It has over 100 default built-in P2P apps to spread as, the list is just manual. I don't even use a list.

I think Yin posted a bigass email list somewhere, but I wouldn't recommend that many as gmail will ban your ass.

Be nice if you could include a pre made email list and provide links to some good free botnets to spread this around to. At least, that would be helping me and I am sure much of HF.

Well, a pre-made email list means that everyone who uses this program will be spamming the same emails. Plus I would need to give a link to my bulletproof hosting with my botnet, so no thanks.

A links to a good free botnet? I don't understand what you mean.

No, its just an addon.

I've been working on something for a few hours. Its an IRC bot maker, you customize all settings and make your own IRC bot. All my future products will now have a kill switch, so when/if they get leaked I just edit a .txt on my host and BAM no one can run the program.

4chan: Already finding browser controls ?

DC clients: Is their even a DC client built in VB.NET?

I actually have never used 4chan, I just know its a website were people can post stuff. Can you give me a brief description on what it is?

And don't you need an account to submit shit?

Not exactly getting on how I can make an auto-spreader for it. Please add more details so its possible and I will make one!

Riseing - April 23, 2010, 8:51 pm

Idk never a better time to find out ^.^

4chan is a image board that has massive amounts of users everyday.

You don't need an account to post. It's like a massive forum that has almost no rules.

The URL MUST BE A DIRECT LINK. NO TEMPORARY LINKS EITHER (This is where most members mess up).

Anyways, For the P2P use:
movie1.avi.exe
movie2.avi.exe
etc

And it auto-gets saved contacts of victims for the email spread.
Also, theirs over 100 built-in P2P application lists ready to go! The other urls are just if you want to add them =P

What?

You put your gmail username and password for the mass email auto-spread to work. It encrypts your details using deathradars polymorphic RC4 source and decrypts the strings on runtime so its impossible to decompile and get your gmail. You can also use any email server if you want. I use one setup on my VPS which is unlimited.

Small little update released:

1. The program is now re-fudded (Scantime/Runtmie)
2. Code is optimized, some errors fixed and some trys and catches added.
3. "Kill switch" Has been enabled. I can stop the possibility of running the BUILDER, but NOT the BOT! This is useful for when/if my program gets leaked, I can just go and disable it and post a working one here.

Yes that will work, as it downloads it and saves it in system32 then it puts the whole list in another list to spam including the victims contacts.

I've used it with all features except p2p and i've noticed no increase in bots. I sent it 30 minutes ago.

To clarfiy, for where you put the file to download, you put a direct .exe link to your crypted bot, then you send out the server.exe file that it outputs (DONT CRYPT IT)

Is this correct?

Yes, make sure your bot is working 100% before you do anything.

Its not instant, idk why you think that sending this to 5 bots will get you more in 30 mins. It only works that way with 500+ bots, which it will get you much more.

SmokeWeedEatYogurt - April 24, 2010, 3:32 pm

Hmmmmm, It seems to work but makes it wait till start up.

Step 1. They download and run it

Step 2. It runs an Installer

Step 3. The worm gets installed

Step 4. The worm downloads my Warbot so we'll say ###.exe

Step 5. The worm seems to run 2 of my Warbot and they "conflict" (the ###.exe's keep resetting and resetting) this causes the mouse to continuously load looking suspicious.

I can however deal with this though because it DOES add it to startup so I can just wait for a reboot.

Also, I found a crypter with stubgen that is frequently updated. I can provide a link to the crypter and which features you can check on the crypter to make this worm work with it. Interested modern?

No, No crypter supports this because its in .NET (Unless if you use a scantime crypter). Its like that with every other crypter too.

xvisceral - April 24, 2010, 4:28 pm

It's not FUD.

I ran it on a bunch of PCs (about 200) and am now at 164. So, to check what was up, I checked a couple screens: detected by Microsoft Security Essentials (to those it didnt kill)

Its probably the dropped email script (As theirs no other way to do it) I'm going to fix that.

What version are you on? The latest version says "Welcome to Project Blackout V2" At the bottom. That one has a lot of under-the-hood improvements and some hidden features I added to stop lechers. Its FUD too :) (I use STMP client instead of vbs scripts)

And you shouldn't loose bots unless your:

1. Doing updates
2. Download And Execute function sucks and its unstable caught mutus caught
3. Bots are shutting down or retarting their PC

Otherwise its basically impossible...

Over 600k emails? If you do that and use gmail your account will be instantly banned for MASSIVE spamming. 7k P2P list isn't smart, it can freeze victims PCs. Lower that to 500.

No chance lol, i have uploaded to my FTP, #, multiupload, and many more,

I have also given this files to 4 people to upload and share on all p2p networks :D

So how can you say, dont mirror ?

Why even share if you dont want to share more ?

dude no link you have posted works so..and i agree i paid him 3 or 4 times on sharecash it just won't let me dl and hes proolly laughing the whole time making money watching us trying to get the file he could send a link to people thta sharecash doesn't work for...its just no fair :(

Not sure if this even works

I used a 1,000 email list I collected off people on my RAT + other private methods
I used a 2,000 file list for the P2P
I used every other spreading method available on the "worm"
I downloaded and successfully executed on ~24 bots

Maybe 2 NEW bots in 24 hours? And it was probably from the USB spread I made on the bot too...

Hopefully this isnt some fake GUI/Program wherein youre just trying to make money off of HF members :\

About

Hello HF, Today I present to you one of the most amazing things you will ever see. This here is "Project Blackout" a HUGE Auto-Spreader. It is 100% free to use. You can double or even triple your botnet with this program. This is highly advanced and professional software. I have seen it before my own eyes and so have many other members. You may NOT re-sell it in anyway, shape or form. If caught, you will be directly reported to a staff member. NO EXCEPTIONS - THIS IS FREE SOFTWARE.

Whats new in V2?

Tones of new and improved options
Better GUI

.NET 2.0 required instead of 3.5 MORE VICTIMS
Overall better, optimized code NO MORE CRASHES
100% Fully Undetectable, Scantime/Runtime
The best Auto-Spreader on hackforums, yes its free!

Get contacts of victim and mass spam them!
Custom Email and P2P Spread
Custom build settings

Features:

Automatically Download and Execute your bot on run
Mass Email Spread (This is why gmail username and password is required)
Infect all HTML documents

Antis

MSN Spread Sends message to all online contacts getting them to download and run your virus
LAN Spread This one is seriously amazing
P2P Spread - Limewire, eDonkey and much, much more Amazing, just plain amazing. When you have over 100+ bots all hosting your virus on limewire you will be getting a fuckload of zombies
Skype spread Send message to all online contacts getting them to download your virus
USB Spread Its your basic, everyday, 100% working and stable USB auto-sperad
Unique [mutex](#). *This way your bot is unique, and other bots do not copy over yours*

Proof

[img]http://img255.imageshack.us/img255/4944/captureay.png[/img]

The power of Project Blackout. Over 130 new bots in 15 minutes.

Note that 98% of the those were from the LAN spread, but now that I have 650 zombies mass-emailing and P2P spreading for me (ofc USB too) I will get much more here and their. So now I don't even Spread. Project blackout spreads for me. *EDIT: NOW I HAVE OVER 700*

- Chat Roulette

- Omegle

EDIT: Can confirm E-Mail isnt working, filled it out correctly and added my own emails to the email list and I havent gotten an email from any bots i installed on

Fixing email,

Omegle isnt possible because it needs the window to be open. Same goes for roulette or w/e.

Well now that i confirmed E-Mail isnt working, are any of the other spreads working? ?

Ill check out the P2P.

To do:

- Fix Email Auto-Spread
- Improve LAN Auto-Spreading (Hard, because of the security of new networks)
- Make P2P Auto-Spreading even better
- Add MSN Message auto-spread (Atm its just file spread)
- Add RC4 polymorphic encryption to everything (Credits to Deathader) With custom encryption key, and crypt everything (Your gmail, auto-spreading list, etc, etc, NOT the output .exe its self because its unstable)
- Add UAC bypass to every function
- Add more protection, anti-leak, etc
- Add Auto-Stub updates

KACTA - April 28, 2010, 2:28 pm

For the MSN spread you should add dynamic MSN messaging for languages.

Example;

Computers locale is Spain, send MSN message in Spanish

Computers locale is Russia, send MSN message in Russian

Easily done.

Can't believe I honestly just spent 15 minutes of my life dling this.

This shit better be worth it.

BTW the new stub is already 5/20, methinks someone is keeping an eye on your development.

The fact that this doesn't support any kind of crypting pisses me off to no end.

I'll give some feedback on how the spreading goes, though.

The next update will be FUD.

And you can't crypt it because its made in .NET, but an advanced C++ crypter MAY be able to crypt it. But no VB6 crypter (Source: BUNNN)

Only scantime crypters.

Okay so I went premium and got the file.. Kind of skeptical about this whole thing though, against what he told us all to do i decided to run it sandboxed and setup a little random server, i took the hidden file he had in the rar and moved it back one directory leaving only the normal stub in there, used the builder and set it up to NOT do email spreading or p2p spreading then ran the server sandboxed, it put put some random ass file in system32 called 'extract.exe' and decided to take a peak at the strings

Code GetOEMCP

GetLocaleInfoW

Oh forgot, I had a couple questions about this...

What manner does all the spreading function in? Does the Blackout worm spread itself and then once it infects someone's computer dls/executes your bot from the link, or does it just spread the bot itself over their messengers/p2p/lan?

Also what is the "backup stub" that is in the folder with the builder?

And I'm not logging IPs. Its just a scare.

No shit, XP/Vista/7 32-bit and 64-bit

Btw you can crypt this with this crypter here: <https://hackforums.net/showthread.php?tid=392521>

Best crypter I have used, and it crypts everything and supports w7 64-bit.

I loved version 2, I really like what you have added on 2.5 now. This is the first auto spreader I have ever seen to have a bot kill feature added to it. Especially like that it kills Ddosser 3.4 and 3.6 (the best free booter). Now people are either stuck using the junk booters, buying a good booter, or getting a botnet.

And mass email...How the fuck did you test it? It takes over an hour (The whole script is very long). Don't try it on yourself with your victims because you will get a fuckload of new emails. And the .txt thing doesn't seem to like to inject into the .txt with the emails unless ran with admin or on XP.

You sir are a dumbass.

Its called "V2.5 Build 1 Killswitch"

If you think theirs an ircbot in my spreader...:

1. Get Virtualbox
2. Install windows on the box
3. Get WireShark
4. Run Project Blackout+Server
5. Have Fun

I can't remember why I named it ircbot1.txt, I was making an IRC bot builder and that was the killswitch but I gave up.

It works (New host ftw) and the stub is fine (Just a false positive on NVT thats IMPOSSIBLE to get rid of),

Run it on all your bots, come back 24 hours and come to this thread saying "OMFG TYVM"

I ran it on 1 bot, and 4 hours later I had 2. Lol. That might just be one more, but I ran it on 1 bot in the first place.

Because I had a killswitch on it. It read a .txt.

Heres the source I used for it.

```
Code Dim request As System.Net.HttpWebRequest =  
System.Net.HttpWebRequest.Create("http://64.120.251.122/~watchur/PB.txt")  
    Dim response As System.Net.HttpWebResponse = request.GetResponse()  
    Dim sr As System.IO.StreamReader = New  
System.IO.StreamReader(response.GetResponseStream(),  
System.Text.Encoding.GetEncoding("windows-1252"))  
    Dim Online As String  
    Online = sr.ReadToEnd  
    If Online = "enabled" Then  
  
Else  
    MsgBox("WARNING: PROJECT BLACKOUT V2.5 HAS BEEN DISABLED. Possible  
reasons: PB May have been leaked, their may be a update or something went wrong somewhere.  
Check my thread for updates!")  
    Process.Start("https://hackforums.net/showthread.php?tid=367792&page=1")

What are you getting?

If its a disabled message then sorry, I fixed that last night but only client-side (Which means you must re-download).

I changed the KillSwitch_1 to "2.0: Enabled" so It disabled 2.5 for a second so I could test something, and I could NEVER find the fucking message to enable 2.5 (Tried: 2.5, 2.51. 2.5.1 and much more).

Wiggs - May 14, 2010, 6:10 pm

Guys, \$harecash isn't THAT hard to use. I answered a couple of questions and got my download on the 3rd page. If you are having problems, clear your cache, cookies, etc. and retry. If you still can't get it to work, try refreshing the page a few times after a few pages of questions (sometimes the download just starts randomly, because it realizes that you already did a survey).

@OP - Does the gmail emailer work on your spreader? I put in the correct settings and I noticed that there are not new sent items yet.

The email spreader takes a fucklong time and theirs a problem with it I believe. I have re-written it and have it working 100% but i'm not sure if I'm going to release it...

3.0 is re-written from scratch. Except from a few things like MSN messenger API (Which I still can't get working! FUCK IT!)

EDIT: I think I will sell 3.0 for about:

\$10 - Bin No updates

\$25 - Bin with updates

\$50 - Builder but no re-sell rights

\$75 Builder with full re-sell rights outside of HF

So lets make this clear so people stop wasting time.

\$hitcash doesn't work on Opera, Firefox, IE, or Chrome.

So if your using Opera, Firefox, IE, or Chrome. If your trying to use \$hitcash at all, your odds are better just buying the f'ing 3-day subscription. Doing the Quiz's do not unluck the f'ing file, nor has it ever worked (without glitching/hacking) in the years \$hitcash has been online.

I just saved you a few hours of your time.

Btw is this true about this auto spreader:

If i was to take my server into college, after using the auto spreader, then opening the file on a college computer, would it spread around the whole network to all the computers, and then when somebody puts their memory pen into a college computer, it would infect their memory pen with my server, and then once they plug their memory pen into their home pc, it would infect their home pc aswell?

Thanks

Finishing in summer, I'm adding so much shit your entire PC monitor will be filled with options to make the ultimate Auto-Spreader and even a bot killer...

personman08 - May 19, 2010, 5:53 pm

Amazing Spreader! A sent this to 230 bots

I already have about 40 from this.

Good Job

Guys...

I downloaded this like 12 times for my friends also..

It is NOT hard to get it to work.

To make it easier, look for survey's saying "\$500 Gift Card" or something fo the sort.

Should unlock immediately after entering you E-Mail after one of those.

Hope I could help.

M0D3RN - Good looking GUI, but I kinda hoped for a slight TuT on how to use this program.

Thanks!

About

Hello HF, Today I present to you one of the most amazing things you will ever see. This here is "Project Blackout" a HUGE Auto-Spreader. It is 100% free to use. You can double or even triple your botnet with this program. This is highly advanced and professional software. I have seen it before my own eyes and so have many other members. You may NOT re-sell it in anyway, shape or form. If caught, you will be directly reported to a staff member. NO EXCEPTIONS - THIS IS FREE SOFTWARE.

Whats new in V2.5?

Tones of new and improved options

Overall better, highly recommended update

BotKiller Beta - Still needs a LOT of work but I'm working on it! (Atm DDoSeR 3.6 and 3.4 works, others haven't tested)

Encryption - Secure your server and the entered info

Email Auto-Spread - Should be working. But please note that it takes an hour to do a routine as its a big job to mass email spam

Antis - New antis, improved antis etc. Secure your server from all the newest antivirus's and sniffers

Disable AntiVirus updates (Improved) - Victims will no longer be able to update their antivirus once ran

Add to startup - Now working in XP, Vista and 7 32-bit and 64-bit!

FUD (Fully Undetectable) - Note that in general its hard to keep it FUD due to all the strings and users, but I will try my best to update it.

Features:

Project Blackout V2.5 is made to spread your botnet, but it works on every .exe on the internet!

Yes, this means: Keyloggers, RATS, Crypted files and much,much, more!

Automatically Download and Execute your bot on run

Add to Startup with UAC bypass

Mass Email Spread (This is why gmail username and password is required)

Infect all HTML documents

Antis

Anti Bot-Killer - Makes your bot more secure by making sure it doesn't get bot killed!

MSN Spread Sends message to all online contacts getting them to download and run your virus

LAN Spread This one is seriously amazing

P2P Spread - Limewire, eDonkey and much, much more Amazing, just plain amazing. When you have over 100+ bots all hosting your virus on limewire you will be getting a fuckload of zombies

Skype spread Send message to all online contacts getting them to download your virus

USB Spread Its your basic, everyday, 100% working and stable USB auto-sperad

Unique [mutex](#). This way your bot is unique, and other bots do not copy over yours*

Proof

[img]http://img255.imageshack.us/img255/4944/captureay.png[/img]

The power of Project Blackout. Over 130 new bots in 15 minutes.

Note that 98% of the those were from the LAN spread, but now that I have 650 zombies mass-emailing and P2P spreading for me (ofc USB too) I will get much more here and their. So now I don't even Spread. Project blackout spreads for me. *EDIT: NOW I HAVE OVER 700 5-14-2010: Average Online is 1.2k

FAQs

Q. OMFG! I NOT GET NEW BAWT!

A. Its not instant. And you need to download and execute it on all your bots.

Q. What the fuck is application list?

A. The list of applications to spread as in P2P networks. Their are 100 default ones built in. Here is an example of a list:

Q. What the fuck is an email list?

A. List of emails to spread to. Example:

Quote:Example1@live.com

Example2@live.com

Example3@gmail.com

Q. Where can I find a email and/or P2P Spreading list?

A. Search for one. DO NOT PM ME!

Q. Is it FUD?

A. Only detected by avira. It bypasses UAC on Vista/7

Q. Where can I get a direct link for my server?

A. www.dropbox.com

Internet is fully on, and there is no error, but it seem that starting another instance of the program, building a new server, then building the one which has every info make a working one.

Its their ^

Send me sourcecode so I can confirm its not Wormy / Poison auto-spreader

Other than that you can just die because these functions are all coded by me.

And you saying

Quote: It has nothing to do with Wormy. It has nothing to do with worm hole spreader, either.

1. Worm hole spreader = Poison auto-spreader source
 2. This has pretty much all the same functions as Wormy and poison
 3. Most of the functions on here that aren't on Wormy / Poison auto-spreader would have been extremely easily added.
 4. This is bullshit because it resembles it in such a way.

Uhm , When i downloaded it and when i gonna open it , It doesnt open :/

Why?

joshwho - May 27, 2010, 1:30 pm

Why r u crying Sank. U have to have a Copyright in order to file for a copyright infringement.

All he made is the Builder and modded a few things. Best of all he is giving out for free just because PCquad originally had it a Free open Source.

Also if u think this is hurting your sales your wrong. You have screwed way to many people with all your other crappy spreaders. You scam them for there money, giving them a non working program, and then instead of fixing the probs you just drop the whole project all together, then make a new one different name and do the same thing all over again.

I dont know how to download :`(`

xgcbxranimal - June 4, 2010, 1:51 pm

i downloaded the mediafire link and i ran in sandboxie since it was originally hosted on sharecash. When run through sandboxie the file loaded then terminated automatically. From what i have seen its got an anti sandboxie code. But im not sure why the main client has that since im not running a bot or the stub.. or am i?? can someone else check this out. im not accusing the creator of backdoor just weird why i cant load in sandboxie.

common sense should tell you that it will be working again when the developer uploads another stub or whatever he intends to do. he's on vacation, leave him be... lol, is it that complicated, no offense but really????

joshwho - June 6, 2010, 5:10 am

This worm does work 100% I have tested it in many different ways. I have Discovered crypting the worm makes it not work at all. The worm freshly created works with no problems. it does everything he said it does. It downloaded my bot the spread text file and added all the stuff to inject to msn messy and others. I cant wait until a new stub is out. Will be checkin back soon.

You should add a builder for every booter and RAT, and make it so it imports your bots onto other booters, so like if you have 80 bots on metus you can transfer them automatically by building this middleman bot and making them run it, then it shares them!

Im thinking of a bigger project. But what? Well no other than an ultimatum! Its a hackloggerbooter, thats right it keyloggs your victims and makes them run your RAT which has a built in booter! Then it automatically (INSTANTLY) glitches a botnet for you!

Just kidding lets start with a booter.

I have no control over when my hosting goes down. I'm using offshore paid hosting from www.vuzehosting.com. Note: The site is hosted on the ONSHORE server, not the offshore! Offshore seems down :S

Hope it comes back!

Haha np, i already created my worm... And one of my victims (noticed over screen control) just got a windows message saying "server.exe - no disk". I'm running it in the "invisible" mode through cerberus. Are there any on-screen prompts when you run it?

EDIT: It also seems non-removable unless I kill the process, my victim just moved it off screen now after struggling with it for a few sec.

DJMflow - June 8, 2010, 11:21 am

EVEN IF THE HOSTING IS DOWN. Will my bot still spread?

I am able to get the panel to come up. I have to click the Project blackout exe a few times and wait a few minutes. but it will come up with the panel. Sometimes it says project blackout is disabled...

I use kbot and ddoser 3.6.

Thats a casual error with USB Spread (no disk inserted).

It happens when a drive appears in my computer but nothing is inserted. Like a MicroSD slot.

I cannot get this to work, hope someone can help me.

I bought iWorm before but it doesn't work so was happy when I discover Blackout and was hoping that it would work better but until now no luck. I will be happy to pay money for a program like this if it just works.

I can make the server and I have sent it to 10 RAT victims as a test to see how it works. The program installs fine and is not detected and if I go in to their processes list I can see it is running. But nothing happens. I have put a test email address in the email list but I do not get any mails from the program. I am on some of the victims MSN but I do not get any fake MSN messages from them.

I use gmail as SMTP server but do I not need to tell Blackout what port to use (465) and how about SSL?

I put in 15.000 names in my Mass p2p application list is that too many?

All help is appreciated

Ok so I built the file, runned on vmware without antis on, didn't worked.

Then tried running it on 2 different pc's it was alright, not sure about spreading haven't tested yet.

But the problem is that it's detected by 10 AV's on NVT. Tried crypting it, but it fails to run if crypted.

Suggestion?

What do you mean it "Just didn't seem to open"

U need .NET 2.0

ChilliBeefSausage - June 15, 2010, 10:32 am

Works on my windows 7, 64 bit. But when i run on windows xp, service pack 2, Vmware, i double click and nothing seems to happen

mayank_predator - June 15, 2010, 10:40 am

Yeah bro its because Windows 7 comes with[installs with windows setup itself] .net framework and thats why it works on windows 7 . It will work on windows xp if you take some pain and install .net framework 2 on xp. Hope it helps .

ChilliBeefSausage - June 15, 2010, 10:41 am

I tried installing it and it said not compatable with previous version =/

Bro can you please post a screenshot of your error and please also confirm the windows xp version you have .

ChilliBeefSausage - June 15, 2010, 11:04 am

There error was only when installing the .net, i get no errors when running the program. The error for installing the .net just said that the previous version isn't compatible with the one i was trying to install (sure it was a later version).

I'm going to try installing another version of XP on vmware. (xp is a weird version by the looks).

What I am trying to say is, once the server is built, are you suppose to give it to someone and then they open it or do you have to make a url for it, by using some type of free hosting website???

Cybomber - June 17, 2010, 9:53 am

I have a couple cybergate victims with routers and I would like to get in to their other computers. That is the only thing I need. I want to upload the worm to the victims computer and then run hidden, then hopefully get the persons second computer infected with my cybergate server and then I want to uninstall the worm completely so they never detect that it was there.

Are these the settings I would use for that? I don't want any of their friends on msn or email contacts to get any messages. Only their second computer.

I'm not sure if the LAN spread requires the person on the second computer to manually agree to install or download my server with a fake popup ??? Or does it just all happen silently without the user even knowing?

This is probably a noob question but what do i do with the "Server" file that appears on my desktop after building the worm, do i run it or spread it?

Cybomber - June 18, 2010, 11:54 am

Can someone please check the settings in the pic and help me out here?

I just want to use this to upload and silent install on one of my cybergate victims and the only thing I want is to get in to his 2nd computer on the router. I'm in his laptop now and want to get in to his PC. I've never used a worm before and I don't want to fuck it up and end up having him discover the worm and then reformat his laptop so I lose everything..

Is the "Ilan spread" box the only thing I check? And does it cause a popup message on his other computer asking to download or does it just install my server silently with no notice? Can the worm be easily removed after so there is no traces?

Also, what is botkiller? There was also some discussion of adding cybergate to this. I'm not sure what that means?

I've read through 87 pages of comments already none of them are about how to use it.

You have to spread it, when your victim runs it its going to spread from the vics pc.

I think 'lan spread' sounds like the server spreads your virus in the local network of your victim so if your vic has more pcs in his house and they are connected together over wlan every pc in the network will get infected.

My question still isn't answerd, you probably didn't see it, so i ask it again, what does the HTML spread?

Yeah i know what lan means, but i was unsure about like how it does it. if it sends a link or just sends the server without the people on the network every knowing. but thanks for the answer.

Cybomber - June 19, 2010, 10:39 am

I just want it to LAN spread so I will upload it through cybergate and run hidden.

1. Do I only need to check "enable LAN spread"? I can leave the other options unchecked like mass email and p2p html ect???? Does it work silently with no pop up requesting download on the victims other computer?

2. Is it possible to remove the worm after it has worked to avoid detection later on?

Thanks man. The ability to remove it would be nice if you're looking for things to add. It's probably not important for people that want to spread all over the world but for people looking to use it very

carefully on a few selected victims to lan spread then removal is important.

I am about to try it right now.

If it's not too much trouble can you take a look at my settings below and tell me if this is correct for LAN spread on my cybergate victim?

This Prog works with out any problems I cant figure out why you think it doesn't work. But maybe it is a good thing you cant figure it out. To me it seems that only people that have knowledge in this stuff never complains but people that don't even understand what it is says it doesn't work.

If you cant get it to work than you shouldn't even be on this site. My kid can make this work and she is only 10 years old.

[color=#1E90FF>Hello HF, Today I present to you one of the most amazing things you will ever see. This here is "Project Blackout" a HUGE Auto-Spreader. It is 100% free to use. You can double or even triple your botnet with this program. This is highly advanced and professional software. Credits to PCquad for wormy source. I have seen it before my own eyes and so have many other members. You may NOT re-sell it in anyway, shape or form. If caught, you will be directly reported to a staff member. NO EXCEPTIONS - THIS IS FREE SOFTWARE.[/color]

[color=#FF0000][size=xx-large][b>Whats new in V2.5?[/b][/size][/color]
[color=#1E90FF]Tones of new and improved options
Overall better, highly recommended update
BotKiller Beta - Still needs a LOT of work but I'm working on it! (Atm DDoSeR 3.6 and 3.4 works, others haven't tested)
Encryption - Secure your server and the entered info
Email Auto-Spread - Should be working. But please note that it takes an hour to do a routine as its a big job to mass email spam
Antis - New antis, improved antis etc. Secure your server from all the newest antivirus's and sniffers
Disable AntiVirus updates (Improved) - Victims will no longer be able to update their antivirus once ran
Add to startup - Now working in XP, Vista and 7 32-bit and 64-bit!
FUD (Fully Undetectable) - Note that in general its hard to keep it FUD due to all the strings and users, but I will try my best to update it.

Project Blackout V2.5 is made to spread your botnet, but it works on every .exe on the internet!
Yes, this means: Keyloggers, RATS, Crypted files and much,much, more!
Automatically Download and Execute your bot on run
Add to Startup with UAC bypass
Mass Email Spread (This is why gmail username and password is required)
Infect all HTML documents
Antis
Anti Bot-Killer - Makes your bot more secure by making sure it doesn't get bot killed!
MSN Spread *Sends message to all online contacts getting them to download and run your virus*
LAN Spread *This one is seriously amazing*
P2P Spread - Limewire, eDonkey and much, much more *Amazing, just plain amazing. When you have over 100+ bots all hosting your virus on limewire you will be getting a fuckload of zombies*
Skype spread *Send message to all online contacts getting them to download your virus*
USB Spread *Its your basic, everyday, 100% working and stable USB auto-sperad*
Unique [url=http://en.wikipedia.org/wiki/Mutual_exclusion]mutex[/url]. *This way your bot is unique, and other bots do not copy over yours*[/color]
