Best Apps for Android

[img=240x240]http://fin6.com/wp-content/uploads/2013/07/6d863fe0e287e82ede96399cf750b8f87.png[/img]

Table of contents:Warning

Best Applications

Warning:

Use these apps at your own risk. It's illegal to use sniffers on networks that you don't own.

Root Checker: [\[LINK\]](#)

Allows you to check if your Android device is properly rooted.

ROM Manager: [\[LINK\]](#)

Makes it a lot easier to switch between different ROM's. You can also make backups of your current.

Super SU: [\[LINK\]](#)

Manage root permissions. This app is usually installed if your device is rooted.

Air Droid: [\[LINK\]](#)

Control your Android device from your computer. You can do things such as: Sending messages, viewing the camera and viewing the gallery.

Ad Free: [\[LINK\]](#)

Works like AdBlocker, just for you Android. Removes ads from free apps.

Market Helper: [\[LINK\]](#)

You can access apps from the whole world with Market Helper. There are apps that are only available in the U.S., and Market Helper allows you to download and install those.

DroidSheep: [\[LINK\]](#)

This is considered a Hack Tool. Allows you to capture accounts from your network.

dSploit: [\[LINK\]](#)

You can sniff accounts, spoof, change all images on your network, change all videos on your network and a lot more with this app.

WiFi Kill: [\[LINK\]](#)

Disconnect people from your network.

WiFi Protector: [\[LINK\]](#)

Protect yourself from being disconnected by apps like WiFi Kill.

WiFi Key Recovery: [\[LINK\]](#)

Shows you the password of WiFi networks that you have connected to in the past. This app does not work as a cracker.

Root Browser: [\[LINK\]](#)

This is the ultimate file browser if you are rooted.

This thread is going to have an update soon!

Feel free to PM me if you want me to add something.

Sh4ck - August 30, 2014, 1:43 am

Thank you sir! Will check it out later today.

Exmix - August 30, 2014, 3:06 pm

Great guide! Very Useful. Would give ya positive Rep, if I could.

Tranquility - September 2, 2014, 5:01 am

Thanks for giving us these applications. Bumping this as it seems quite useful to other android users.

dinosaur770 - September 10, 2014, 8:20 am

Thank you for the list, very useful for beginning droid users. Also, the droidsheep site doesn't allow users to download the app from there any longer. I have the app if you want the link to it pm me (mediafire). Good list though

Tweekzify - September 10, 2014, 8:26 am

What is a good rom for Samsung galaxy s3 4G LTE? I fixed AOSB on my phone, but i dont like this shit at all and im not good at rooting and stuff so.. PM me an answer if you can bro! And thanks for these apps btw!

Durham - September 19, 2014, 2:37 pm

dSploit and wifi killer dont works for my note 3 rooted :(

shinobi_apk - November 20, 2014, 2:36 pm

you forgot rom toolbox, flashify, terminal emulator, just to name a few. theres also external to internal, link2sd, blackmart, and the best of all, lucky patchier. i prefer cwm superuser cuz it allows you to turn of toasts and auto allow/deny su permission.

NinhHo - November 20, 2014, 9:10 pm

very nice list. I'll try them out when I get a chance.

Long Morrison - November 20, 2014, 10:46 pm

Download busybox from google play and install it. ?

'Deadly - November 20, 2014, 10:48 pm

I think you should add greenify, zanti and freedom to this list but it's a very informative thread.

Shadow Reign - November 20, 2014, 11:28 pm

Heres some more if you want to add them

-DroidSheepGuard: Warns of network attacks and disconnects you in the event it happens.

-Interceptor-NG: A suite of network analysis tools

-Wireshark: A packet sniffer

-AscRecorder: Takes videos of your phones screen

-LOIC: A Denial of Service tool. Actually works decently for what it is

-SQLMapChik: A tool used for making website vulnerability assessments and attacks easy and simple on your phone or tablet.

-FASL: An app for writing scripts using a language developed specifically for android scripting. You can create schedules for the scripts to run on specfic events like incoming SMS texts, battery status, and more

-AIDE: Android Integrated Development Environment allows you to write apps from your device!

-Terminal IDE: A package of IDE's and compilers to write programs in any language directly on your phone or tablet!

All these are on google play.

Cyber Saint - November 21, 2014, 2:52 pm

Fairly nice list for people that are looking for these sort of tools. Nice contribution.

shinobi_apk - November 24, 2014, 8:29 pm

now thats what im talking about!, been looking for something like these: -FASL & -Terminal IDE. good apps to have around!

weka456 - November 26, 2014, 4:32 am

Thank you men, its great apps :)) i would like to know more apps :)

kyan_H - November 26, 2014, 8:29 am

Thanks, very use full and some good apps

techguyresearcher - November 29, 2014, 4:52 am

Great, very much Usefull man... :) :) :)

JOW - May 11, 2015, 8:53 pm

Very dumb question...Do I have to be rooted.? I just got a Galaxy tablet so I am wondering.
