Business - August 9, 2013, 11:55 am

Ultimate Beginners' Guide to Dark Comet

This guide is designed for anyone that is interested in learning more about Remote Administration Tools and how to set them up.

In this guide I go in great detail to explain how to set up Dark Comet, the leading free Remote Administration Tool.

This guide will help you not only get your RAT ready to go, but it will also briefly teach you how to spread your final product.

Before we get started, we must download the tools essential for this guide to be followed correctly.

I suggest saving these onto your desktop for easy access later in the guide.

I have placed the downloads into a folder which you will find below.

[\(Downloads\)](#)

Once you download the folder, continue to install Duck DNS.

==

First thing we need to do when setting up Duck DNS is go to their website. You can find it below.

[Duck DNS site](#)

Next thing we need to do is sign in.

In the top right of the homepage there are multiple options for signing into Duck DNS, you can pick whichever one you prefer.

Once you sign in, you will be greeted by a page like this (I have blanked out certain parts of this thread for obvious reasons):

Next thing we are going to do, is choose a DNS hostname/domain.

In the middle of the page, there is a place to fill out this hostname. You may choose whatever you want, then press "add domain".

Your hostname is what you will use as your IP/DNS when making your file in Dark Comet later on in this guide.

I suggest making your hostname something you will remember.

Business - August 9, 2013, 11:56 am

Port Forwarding

Why do we port forward?

Port forwarding allows us to open a port that we will use to receive your connections on Dark Comet.

Without your port forwarded, the connections we expect to receive would not come through.

What ports will you be using?

There are thousands of ports.

You only need to open one for Dark Comet.

You could pick from many ports, but for this guide you will be using 5050.

Why? The only reason is because that is what I have chosen.

It does not matter what port you use. I personally use these ports for demonstrations, so that is what I will use for this guide.

How to Portforward

Many people find port forwarding to be a tricky task.

There are many steps that are commonly overlooked when Port Forwarding.

I will now show you how to properly forward your ports.

The first thing you are going to need to do is figure out what your Default Gateway is.

You can do this by going into your Command Prompt.

I am a Windows User, so this guide will be based off of Windows instructions.

The steps may be partially different for other Operating Systems.

To find your Command Prompt, click the start button located, usually at the bottom left corner of your computer screen.

Once you have clicked it, type "cmd".

A black screen should pop up.

This is your Command Prompt. Next you need to type "ipconfig".

This will present you with your connection information.

Your screen should now look something like this. (Example pic)

If you do not see where it says "Default Gateway", you may have to scroll up or down.

Once you have found it, minimize this for now.

Next you need to open your Internet Browser.

I personally use Google Chrome.

Now you must enter the Default Gateway that you found in the Command Prompt into your Address Bar.

Mine is 192.168.1.1, so that is what I entered into my Address Bar.

Click Enter. You may be welcomed by a prompt asking you for a User Name and Password.

In this case, unless your User Name and Password are customized by you or someone else, than you should be able to find them on the website below.

The website will ask you for the brand and model of your router.

To find what model router you have, you can check on the router itself.

It should be listed as "Model No.", or something similar, somewhere on your router.

[Router list.](#)

All you have to do is enter what brand and model you have, and it will come up!

Once you have found and entered your User name and Password, you should be brought to your router's homepage.

These vary in style according to your router brand. Mine looks like this:

The methods to port forwarding are different based on what router you have.

On mine, you go to “Applications and Gaming”.

Seeing that I can only demonstrate how to do it on my router, I will provide a website with instructions on how to port forward on each router.

Make sure to follow the directions for your router precisely and completely.

Remember, you are using port 5050 for Dark Comet.

When it gives you the option to select “Protocol”, you will have either two or three options.

If you get two options, they will be “UDP”, and “TCP”.

If you get three options, they will be “UDP”, “TCP”, and “UDP/TCP”.

Sometimes instead of the option “UDP/TCP”, it will say “Both”.

You need to select “UDP/TCP”, or “Both”.

When you are filling out the IP Address, you will use your IPv4 Address.

You can find this by going back into your Command Prompt and typing “ipconfig”.

It should be located around the same area that you found your Default Gateway.

This is what my port forwarding looks like.

Once you are done, Hit “Save Settings”, or a button similar to this, which you will find somewhere on the page, commonly towards the bottom of the page.

To test if you have successfully forwarded your ports, you can use this site.

[Test here.](#)

Go to this site, and type in your port where it says “What Port?”

If you were successful, you should automatically load this:

If your port was not successfully forwarded, you will get this:

(I chose a random port that I knew was not forwarded.)

If you DID get this error, DO NOT WORRY! There are many things that keep ports from forwarding.

Port Forward Troubleshooting:

The most common problem I see people having with Port Forwarding is Windows Firewall.

You can find this by either going to “Start”, and searching “Windows Firewall”, or by going to your Control Panel.

When you select Windows Firewall, you will see a page that looks like this:

The first thing you need to do is locate “Turn Windows Firewall on or off”.

This can be found on the left side, in the middle. Click on it now.

You need to make sure none of the boxes are checked and that all options are set to off.

After you do this, the places on your screen that were once green, should now be red.

This is where the most common mistake comes in. Most people think that Windows Firewall is now completely off.

It is NOT! See where it says “Block all connections including programs on the list of allowed programs”?

You need to fix this.

The next thing you must do is find where it says “Advanced settings”.

Once you click it, you will be brought to this page:

You will notice that it still says “Windows Firewall is on.”

For your next step, click “Windows Firewall Properties”.

A pop-up will appear:

You need to change where it says “Block”, to “Allow”.

After you change it to “Allow”, change the firewall state to “Off”.

Do this for all three tabs.

Once you have done this for all three tabs, press “Apply” at the bottom. Then press “OK”.

Where it previously said “Block all connections including programs on the list of allowed programs”, it should now say “Allow all connections that do not have an exception to block the connection”.

Now that you have completely and successfully disabled Windows Firewall, you can test to see if your port forwarded once again:

[Test here.](#)

Still having problems?

You may have a firewall enabled on your router itself.

Go back to the router homepage that we opened earlier and go to “Security”.

Most router homepages will have that section.

Look for any firewall settings and make sure they are off.

If you are on a wired connection, and cannot manage to open your ports, I suggest buying a VPN that supports port forwarding.

For this, almost any VPN will do. Just be sure to get one that supports port forwarding.

Many of you will find it a good idea to run a VPN.

Business - August 9, 2013, 12:03 pm

Once you have done all the steps to port forward, you can start to set up Dark Comet.

If your port is still not appearing as open on <http://canyouseeme.org/>, then the first step when setting up Dark Comet may fix this.

First thing you need to do is open Dark Comet, which you downloaded earlier.

When you open Dark Comet, you will be welcomed by a pop up.

It will look like this:

Check the box for “Do not display again the EULA”. Once you can, click “I Accept”.

You will now be brought to Dark Comet itself, along as another pop up.

Check to box for “Do not show at startup”. Click “Fine”.

Now, Dark Comet should look like this:

The first thing you are going to do is click the “Socket /Net” tab.

Now you are going to right click in this area:

You will be prompted by this pop up:

Click “Add port to listen”.

A settings box that looks like this should appear:

This is how you set Dark Comet to listen to your port.

Since you port forwarded port 5050 earlier, you will type 5050 in the box.

Keep “Try to forward automatically (UpNP)” checked.

Click “Listen”.

Dark Comet should now look like this:

Now test your port once again via <http://canyouseeme.org/>.

If you get success, you have been successful up to this point.

Now you will build your Dark Comet stub.

Select the following:

You will be brought to this screen:

Your “Stub ID” is an ID that will pop up next to your connections on Dark Comet.

These are a good way to organize your connections.

For example, if you know you will be remotely controlling your second laptop, you could type in "PC2". But it really does not matter.

In the "IP/DNS" box, you type your Duck DNS hostname.

Your hostname will look something like this:
exampleaccounts123.duckdns.org

In the "Port" box, you will input your port.

The port you have set up for Dark Comet is 5050, so input it into the box.

Uncheck the "Start the stub with Windows (Installation)" setting.

You are now done making your stub.

Click "Normal", then name it and save to your desktop.

Business - August 9, 2013, 12:04 pm

Now that you have your stub, you need to test it before you crypt it.

Head over to:

[Anubis](#)

Once there, you need to scroll down until you see this:

Now, click "Choose File", and select it your stub.

Now type in the "Get a priority boost" four digit code.

Then press "Submit for Analysis".

Now, a test will begin. Let the test run.

If everything has been done properly on Dark Comet and port forwarding, you will receive a temporary connection in Dark Comet.

If you do, so far so good! (:

Now we can move on.

Business - August 9, 2013, 12:05 pm

There are many crypters out there, but I will be showing you how to use Razor Crypt.

First, open Razor Crypt.

It should look like this:

The first thing we will do is select our stub.

Find your stub, and select it in the file area:

Now, if desired, you can add an icon to disguise your stub better.

I will link some icons that I find useful:

[Icon downloads.](#)

Once you have selected your icon, click "GEN" a few times:

For the right side, set your settings to match mine:

These are my personal favorite settings to use.

Head over to the "Additional Options" tab, and select the following:

Now, accept the terms of service, and hit "Crypt".

Save it to your desktop, and BOOM! You have finished making your RAT!

Note: Binding is optional, and can be used if done properly.

That brings my guide to a close! I hope you enjoyed it and got some use from it. I am sure it will help many of you!

redpois0n - August 9, 2013, 1:27 pm

Really nice tutorial you have made... very nice work

Business - August 9, 2013, 1:37 pm

I really hope that this thread gets the attention it deserves.

Understalker - August 9, 2013, 1:51 pm

As always, a mothafuckin detailed guide. This shit is long as fuck, and should help EVERYONE with their RAT issues.

redpois0n - August 9, 2013, 1:53 pm

(Aug 9, 2013 01:37 PM)RAT Setup Wrote: [\[CITE\]](#) I really hope that this thread gets the attention it deserves.

I'll make sure of that, don't you worry ?

Business - August 9, 2013, 2:16 pm

Thank you for the kinds words Under!

jtagsrcool_z - August 9, 2013, 5:09 pm

When i go into canyouseeme i get this...

Error: I could not see your service on (IP ADDRESS) on port (1606)

Reason: Connection refused

Understalker - August 9, 2013, 5:31 pm

(Aug 9, 2013 05:09 PM)jtagsrcool_z Wrote: [\[CITE\]](#) When i go into canyouseeme i get this...

Error: I could not see your service on (IP ADDRESS) on port (1606)

Reason: Connection refused

Did you portforward/listen to your port?

ShadowLock - August 9, 2013, 5:55 pm

That looks pretty cool! If you know how to do It, you can show how to port forward with uTorrent too :)

Note; Any problems with this tutorials can look at my signature.

Business - August 9, 2013, 6:36 pm

I may be adding more soon. Writing more sections.

OG Alien - August 9, 2013, 10:45 pm

I want to try blackshades, but all I hear is shitty stuff about them, it drops slaves more than dark comet, which is a pretty big deal.

Business - August 9, 2013, 10:48 pm

I disagree. Black Shades is a wonderful tool that works extremely well.

jazzybazz - August 10, 2013, 7:41 am

That's a wonderful guide.

Just a quick question: my port forwarding seems only to work after i added the port in the Socket/Net section on DarkComet. If i close this socket, my port will stay closed. Is that normal?

Business - August 10, 2013, 7:42 am

This is very normal for some cases. My own set up used to do that when I first started.

Erin - August 10, 2013, 7:55 am

Last few sections were extremely helpful and now I got my RAT up and running! Excellent guide, thank you so much!

jazzybazz - August 10, 2013, 8:39 am

@RAT Setup

Solved my problem! I was dumb enough for not using my localhost.

Have a nice day.

Business - August 10, 2013, 8:58 am

I am really happy to hear this is solving problems for you guys!

TheWaifuHunter - August 10, 2013, 10:44 am

This is awesome but i still cant get it to work haha and through this i payed for BlackShades VPN that i cant get to work XD i think i just fail at the pc X_X .

Business - August 10, 2013, 11:25 am

BlackShades VPN is currently down. Please give it a day to come back up.

redpois0n - August 10, 2013, 2:15 pm

Maybe you could add a jRAT help section to this thread =)

Business - August 10, 2013, 4:09 pm

I will in a few days. Have to write it and all.

Elmomoh - August 12, 2013, 5:41 am

Very very helpfull and detailed guide, thanks a lot I will try soon!!

Business - August 12, 2013, 9:23 am

Thank you for saying so! I hope that it helps you get your RAT going!

killamaster7888 - August 12, 2013, 5:40 pm

very well written tutorial. thanks for posting OP.

Business - August 13, 2013, 7:40 am

Thank you for the compliment! I tried to make this as detailed as I could.

Business - August 15, 2013, 4:41 am

Just the ones in my head... I might release some soon!

jackbaur57 - August 15, 2013, 11:05 pm

thanks for your tutorials.. i really appreciate it but i am having problem with the Default Gateway asi entered the gateway into chrome and mozilla it does not load and i have disconect all my firewall and anti virus. pls your help will be appreciated..

Business - August 15, 2013, 11:05 pm

Did you go to your CMD and looking for your proper default gateway?

Business - August 15, 2013, 11:14 pm

That is correct, although I would take some of that down...and add a spoiler perhaps.

(A)revolution(A) - August 16, 2013, 3:04 pm

I need help with portforwarding. Its not connect timed out. Its saying connect refused is that a firewall thing because I did all the things it said. also i really like the post!

Business - August 16, 2013, 3:48 pm

Did you try everything in the port forwarding part of this thread?

cipixis - August 16, 2013, 5:32 pm

this is a great guide thank you very much!

Hedwig - August 16, 2013, 7:43 pm

Very detailed guide, I already know how setup a RAT; however, one of the best RAT tutorials I have seen (wish I had this around when I was learning :P).

Business - August 16, 2013, 9:16 pm

Thank you! I really appreciate my work being recognized.

jeffsims23 - August 18, 2013, 7:08 pm

I would like to also say thanks for this tutorial. It's been helpful.

Business - August 18, 2013, 8:47 pm

Thank you for the compliment on the tutorial.

Naveen - August 18, 2013, 10:29 pm

Nice tutorial.. But Any free crypter to FUD the server?? if yes give the download link

Business - August 18, 2013, 10:30 pm

I can not professionally recommend a free crypter, as none of them are FUD.

GriefCraftMining - August 19, 2013, 4:55 am

I actually have BlackShades and Razor crypt, but never got around to using them. Now I'm on a new PC so I will ask Razor to change my HWID and do it myself for BlackShades, so I can finally use them.

Business - August 19, 2013, 10:52 am

I hope that this guide will help you use your programs.

SIM-1809171 - August 19, 2013, 3:59 pm

Amazing Tutorial. Im sure it will help a lot of people. Well done man.

Business - August 19, 2013, 4:46 pm

Best tutorial around the RAT Section in my opinion.

Tangy - August 20, 2013, 2:21 am

I vouch for Business., he really knows his stuff around Remote Administration Tools :)

sear8 - August 20, 2013, 3:52 am

i tried to test my port but there is an error "connection refused" please help

Business - August 20, 2013, 9:38 am

Double check all the port forwarding steps, if you still have the problem, PM me.

TheJunkieMonkey - August 20, 2013, 11:37 pm

This is Great stuff and i can vouch that I have Computer Autism but even I understand those steps.

But I am looking to attach this to a word document then send it off and once opened.. you get the rest.

Can this be done with this?

Business - August 20, 2013, 11:38 pm

Yes it can. Binding is a great thing if done correctly.

TheJunkieMonkey - August 21, 2013, 11:20 pm

(Aug 20, 2013 11:38 PM)Business. Wrote: [\[CITE\]](#) Yes it can. Binding is a great thing if done correctly.

So this guide will create me a Keylogger-esque program that I can attach to a word document send off into cyberspace and will not get picked up by antivirus's etc?

Business - August 22, 2013, 4:25 am

It is much more than a keylogger, but yes a keylogger is included.

wilsonj17 - August 22, 2013, 4:48 am

Great TUT!! Helped me out alot with question's i had.

Neebor - August 22, 2013, 5:03 am

Very detailed tutorial...thanks man....++

(Aug 20, 2013 03:52 AM)sear8 Wrote: [\[CITE\]](#) i tried to test my port but there is an error "connection refused" please helpLet Darkcomet listen to your port.

This was MY problem:

My port was closed: "connection timed out".

When my port was open, but no program was listening to the port: "connection refused"

Darkcomet listening to the port: connection ok.

My question, where can i upload an EXE file?

Thansk

I tried your settings, but after crypting with razorcrypter, my stub does not connect anymore. I tried this on my brother's computer.

How is this possible?

Also when I upload an EXE to ge.tt, and download it from his PC, it's not an exe anymore.

It has to be renamed to .Exe to open. How can this be fixed?

SpyHacker - August 22, 2013, 6:34 am

Thank you very much for this guide , i think it is the best

GriefCraftMining - August 22, 2013, 6:36 am

(Aug 22, 2013 05:03 AM)Neebor Wrote: [\[CITE\]](#) Very detailed tutorial...thanks man....++

Don't use getting, use something like <http://www.sharesend.com>

THDG - August 22, 2013, 1:15 pm

Thanks,

I wish i knew how to send u some reputation :D

dremra - August 22, 2013, 3:50 pm

Very nice and detailed work!Thank you!!!

Killerz118 - August 22, 2013, 5:45 pm

Nice job on the guide, although I do have one quick question regarding the crypter, Razor Crypt. In your guide I can't find where to download it, and although I vaguely remember a download link to it the day this guide came out, I could be mistaken. Is there any location where we can download either Razor Crypt or an alternative good crypter? Thanks.

Business - August 22, 2013, 5:48 pm

You have to buy it here on Hack Forums.

<https://hackforums.net/showthread.php?tid=3454714> That is the sales thread.

SNiFF - August 22, 2013, 10:48 pm

very good, informative post +1, i will recommend this thread

:)

TheJunkieMonkey - August 22, 2013, 11:20 pm

(Aug 22, 2013 04:25 AM)Business. Wrote: [\[CITE\]](#) It is much more than a keylogger, but yes a keylogger is included.

That Is Brilliant, now I know what I am doing this weekend

?Arrow-? - August 23, 2013, 1:23 am

I am doing all the stuff you say when I run my .exe original that was made using darkcomet it comes up with me as a RAT once I crypt it with Razorcrypt and I run it sandboxed (I dont use anti sandboxie just for testing) and it doesn't show up as a RAT it just doesn't come up? Please help.

Neebor - August 23, 2013, 2:44 am

I asked them for new recommended settings but no answer :(.

The settings on their forum are outdated.

hai1000 - August 23, 2013, 3:37 am

thanks for share :) , i will try that

Business - August 23, 2013, 4:36 am

Thanks for all the compliments on this!

Nav@2015 - August 23, 2013, 6:27 am

this guide is great for beginners....

TheJunkieMonkey - August 23, 2013, 12:24 pm

Can you run this on numerous computers/laptops at once?

Business - August 23, 2013, 12:53 pm

Yes you can. You just need your No-Ip hooked up for when you move to a new location.

Leven - August 23, 2013, 2:52 pm

Thanks for posting, another great HQ post!

Business - August 23, 2013, 3:16 pm

Thanks for the post. I hope that this continues to help everyone!

Vladmir Putin - August 23, 2013, 4:42 pm

hey what is a good way to use a router that is not your own? I think that is the easiest way to get caught since the traffic is directly being shown to be directed towards YOUR ports.

Business - August 23, 2013, 11:23 pm

Use a VPN that does not keep logs. That will keep you decently secure and safe.

TheJunkieMonkey - August 24, 2013, 12:59 am

I am having difficulty up to the Firewall part, My windows Firewall is off, with your instructions matching what is happening with mine.

In Regards to a Firewall on the router, I have this:

Outbound Services

#	Enable	Service Name	Action	LAN Users	WAN Servers	Log
Default	Yes	Any	ALLOW always	Any	Any	Never

Inbound Services

#	Enable	Service Name	Action	LAN Server IP address	WAN Users	Log
1	5050	ALLOW always	192.168.0.3 (5050:5050)	0.0.0.0 (1:65535)	Never	
Default	Yes	Any	BLOCK always	Any	Any	Never

Obviously the second one is what I created for this and it 'allows' which according to the forums is how you turn it off

I don't know if this matters but the IPV4 Address is different then my IP address.

I use a Sky Sagem router

And when I created it i had these options

Service

Action

Send to LAN Server: . . .

WAN Users

Start: . . .

Finish: . . .

Log

I left the start and finish blank.

Also i have my antivirus on during this time, not sure if that makes a difference

P???ce - August 24, 2013, 2:31 am

This is really a complete & very nice article.
Thanks dear.

Neebor - August 24, 2013, 3:45 am

My slaves receive an Autolt Error (Appdata), when I used your settings for RAZORcrypter.

Business - August 24, 2013, 4:37 am

I suggest you take another look then... I do not get any errors.

Tebulot - August 24, 2013, 6:25 am

I suspect I've missed something, and it's probably very simple.

Port forwarding is ok, all settings appear to be as they should, and everything is running smoothly.
However when testing the stub, I get nothing on my connections list.

Clearly I'm doing something wrong somewhere. Can I ask someone to have a quick check for me?

:edit: First post! Celebrate immediately.

Business - August 24, 2013, 6:57 am

Try checking your stub settings. That might be the problem.

TheJunkieMonkey - August 24, 2013, 7:37 am

(Aug 24, 2013 06:57 AM)Business. Wrote: [\[CITE\]](#) Try checking your stub settings. That might be the problem. Hey can you look at my post a few posts back and see if anything I am doing is wrong?

Tebulot - August 24, 2013, 8:29 am

Would compressing via UPX be causing the issue? (I'm running blackshades by the way)

Nope, that doesn't seem to be what's causing the drama. I'll keep tinkering.

Business - August 24, 2013, 11:35 am

untouchable99 - August 24, 2013, 1:58 pm

Is it possible to RAT anyone without having the download the file?
Can I pay you to setup a RAT?

Business - August 24, 2013, 2:03 pm

You could have, if you didn't get exiled.

D.O.c00l - August 26, 2013, 3:11 pm

coolest one to get started man ..cheers!!

Ricky? - August 26, 2013, 5:43 pm

Thanks alot man! I was having trouble with the firewall I disable all my windows firewall. Thanks :)

#R00T~ - August 26, 2013, 5:46 pm

Very detailed tutorial, thanks for sharing OP.

Steroid Pig - August 26, 2013, 5:47 pm

Any experience with Imminent Monitor? Having some problems. I'm pretty sure that everything is okay, port is forwarded, it's listening, No-IP is running but my clients won't show up. I am crypting with RazorCrypter.

Business - August 26, 2013, 5:53 pm

Use this to check your ports:

<https://hackforums.net/showthread.php?tid=3680749&pid=34502914#pid34502914>

That is from my DC guide, but the port forwarding still applies here.

Steroid Pig - August 26, 2013, 5:55 pm

Everything seems okay, it's not my first RAT. Ports are allowed, everything is good. The only weird part is that I don't get any Clients.. I'm not sure if my settings wrong or something.

Business - August 26, 2013, 5:58 pm

Just because you spread, does not mean you will get slaves. Is Imminent currently FUD?

Steroid Pig - August 26, 2013, 6:01 pm

I am using a FUD Crypter. I infected myself and some mates that wanted to help me a couple of times, didn't work.

Business - August 26, 2013, 6:02 pm

What settings are you using when building you stub, and for crypting?

Steroid Pig - August 26, 2013, 6:19 pm

Tried all the stub & crypt settings possible.

Business - August 26, 2013, 6:21 pm

You selected every single setting for stub and crypter at once?

Steroid Pig - August 26, 2013, 6:23 pm

No ofcourse not, I tried some good settings, tried the minimal settings, nothing really worked out..

Business - August 26, 2013, 6:25 pm

Try using only network settings for your stub, and use startup and antis on crypter.

Steroid Pig - August 26, 2013, 6:29 pm

Just made a stub and crypted it just the way you said and it did not work. :(

Business - August 26, 2013, 6:36 pm

Is Windows firewall completely off?

Steroid Pig - August 26, 2013, 6:45 pm

Yes, Firewall is off, No Anti-Virusses.

Business - August 26, 2013, 6:48 pm

Let me see your advanced Windows firewall settings?

SaladFingerz - August 27, 2013, 12:41 pm

Hey guys, I am not able to actually download the file because "it could not be saved because source cannot be read."

Business - August 27, 2013, 1:36 pm

Which file are you referring to? Please let me know.

Chelsea Monday - August 27, 2013, 9:19 pm

Great tutorial. Helped me with a few things I wasn't clear on.

Thanks for making and posting.

Business - August 27, 2013, 9:41 pm

I am really glad that this is helping people the way I wanted it to.

THDG - August 27, 2013, 11:55 pm

Nice, Guide.

I only had a problem with port forwarding, but i fixed it :).

rrrqwe11 - August 28, 2013, 9:03 am

do you really need a router?? does it also work with just the modem??

geeksified - August 28, 2013, 11:45 am

Hi, I'm newbie here. :) Thanks for this thread.

I have a problem. My IP is 192.168.11.15 and my default gateway is 192.168.11.1, but when I put my IP address on the router interface box, it results to error: "Invalid IP address! It should be set within the current subnet."

However, it can only accept IPs on this range: 192.168.1.***

PCPirate2009 - August 28, 2013, 12:35 pm

Thank you for this great tutorial!!! I've received a connection from Anubis ?

Business - August 28, 2013, 12:53 pm

I am very glad that you were successful!

xbucko13x - August 28, 2013, 3:17 pm

Great tutorial, very detailed nice job :)

Raute - August 28, 2013, 3:49 pm

great tutorial!!

i received a connection from anubis when i made a stub like u did.

But after i crypted it with "sin-crypter" i don't get a connection when i upload the crypted file.

After that i tested it again with a new stub and i don't get a connection anymore :(

EDIT: ah i get a connection with the unencrypted file, what could i have made wrong with the crypter?

Business - August 28, 2013, 4:10 pm

You do not use Anubis on files that are crypted.

TheJunkieMonkey - September 2, 2013, 11:29 am

I guess nobody can help me then. Shame

Business - September 2, 2013, 11:30 am

You didn't even ask for help as far as I remember...

TheJunkieMonkey - September 3, 2013, 9:28 am

(Sep 2, 2013 11:30 AM)Business. Wrote: [\[CITE\]](#) You didn't even ask for help as far as I remember... I posted 3 times on here and sent you a private message.

Unless that was sarcasm?

Business - September 3, 2013, 9:44 am

Are you talking about your port forwarding post? Easy fix. Check the tabs in firewall, if that doesn't fix it, then your forwarding via router is incorrect, I can help.

TheJunkieMonkey - September 3, 2013, 9:47 am

(Sep 3, 2013 09:44 AM)Business. Wrote: [\[CITE\]](#) Are you talking about your port forwarding post? Easy fix. Check the tabs in firewall, if that doesn't fix it, then your forwarding via router is incorrect, I can help.

Yeah That is where I got up to. Then hit a Brick wall.

I am going to try again this weekend

Business - September 3, 2013, 9:48 am

I will be here to help if you need it.

mclema - September 5, 2013, 7:02 am

Hello business,

I setup my immininet rat with vpn as u advised me to... it works but I am still having one issue. After portforward correctly and setup, I infected myself.. it shows on the imminent icon incoming client with my ip and all info.. it also show that connected client: 1..But it did not appear visible on the rat.. what is happening.. is it bcos of the vpn that I'm using or what??

Business - September 5, 2013, 6:37 pm

I need a more clear explanation, please contact me with more information, thanks!

mclema - September 6, 2013, 1:32 pm

Hi business, big vouch for your tutorial on darkcomet and blackshade rat.. it works perfect.. but I try crypting my darkcomet stub with byte crypter.. after crypting, the stub doesn't work anymore.. I tested it after crypting but it doesn't work.. does that mean the crypter corrupt the stub file or what? But byte cryper has been tested, working perfect with darkcomet by the coder... but I wonder why it doesn't work with my darkcomet. .

Business - September 6, 2013, 3:58 pm

What settings are you using on your crypter?

TheJunkieMonkey - September 7, 2013, 11:13 am

Hi

I still have the same issue as before, here is what I said in the previous post, any help or pointers will be great :

I am having difficulty up to the Firewall part, My windows Firewall is off, with your instructions matching what is happening with mine.

In Regards to a Firewall on the router, I have this:

Outbound Services

Enable Service Name Action LAN Users WAN Servers Log

Default Yes Any ALLOW always Any Any Never

Inbound Services

Enable Service Name Action LAN Server IP address WAN Users Log

1 5050 ALLOW always 192.168.0.3 (5050:5050) 0.0.0.0 (1:65535) Never

Default Yes Any BLOCK always Any Any Never

Obviously the second one is what I created for this and it 'allows' which according to the forums is how you turn it off

I don't know if this matters but the IPV4 Address is different then my IP address.

I use a Sky Sagem router

And when I created it i had these options

Service

Action

Send to LAN Server: . . .

WAN Users

Start: . . .

Finish: . . .

Log

I left the start and finish blank.

Also i have my antivirus on during this time, not sure if that makes a difference

Business - September 7, 2013, 11:15 am

If you are having problems that you don't want to deal with, get a VPN such as nVPN.

TheJunkieMonkey - September 7, 2013, 12:58 pm

(Sep 7, 2013 11:15 AM)Business. Wrote: [\[CITE\]](#) If you are having problems that you don't want to deal with, get a VPN such as nVPN.

I don't mind dealing with it, I just don't know how.

So If I get a VPN can I skip that part?

Business - September 7, 2013, 1:02 pm

If you get a VPN ports are never a problem. Make sure the VPN you get opens ports or allows you to do it manually.

TheJunkieMonkey - September 7, 2013, 2:24 pm

(Sep 7, 2013 01:02 PM)Business. Wrote: [\[CITE\]](#) If you get a VPN ports are never a problem. Make sure the VPN you get opens ports or allows you to do it manually.

Are there any decent free ones you know off?

Business - September 7, 2013, 2:27 pm

I do not know of a free VPN that opens ports. Have a look at some port forwarding guides, or have a look at an automatic port forwarding tool. Some of the ones on Hack Forums work well.

Lawliet Lawsford - September 7, 2013, 2:29 pm

Awesome guide Business. This should really help out anyone who's interested in RAT's. Keep up the good work ?

Business - September 8, 2013, 5:29 am

Thanks for the vouch, love to hear kind words like this.

Raz?r - September 8, 2013, 7:40 pm

Very nice tut mate. Thanks for showing Razorcrypt in it :)

Business - September 9, 2013, 2:45 pm

I am glad to have your product as part of the tutorial!

3lectricWave - September 9, 2013, 7:58 pm

Great job, should really help newbies.

jerrymoris - September 9, 2013, 10:50 pm

can someone help me with setting up the darkcomet plzz..i am new to the stuf,, i would appreciate for a little minutes of your precious time,, my skype id is jeremygrahamm
thanks a lot in advance

Business - September 9, 2013, 10:51 pm

Did you go over the tutorial? Everything is here that you need to set up Dark Comet successfully. Let me know what part you are having trouble on.

jerrymoris - September 10, 2013, 12:49 pm

i understand the tutorial perfectly,, you did a great job as is more detailed than any tut i have seen,, but i have problem port forwarding.. my gateway 192.168.1.1 cannot open on any any of my browsers..i have followed the firewall deactivation and still couldn't connect me to my router page for the admin and pass link.. i need some help plz... thanks in advance,

my skype is jeremygrahamm in case u got a minute to assist me by tv

Business - September 10, 2013, 1:17 pm

I suggest you take a look at a port forwarding guide to assist you with your specific situation:

<http://portforward.com/routers.htm>

M1st3rPuff3r - September 11, 2013, 12:43 pm

Great help Business, i thought i'd give DC a try while waiting for Imminent Monitors long awaited update and i'm glad i did, the rats easy enough to work but thanks for the tip about anubis, i didnt know about that.

Business - September 11, 2013, 12:54 pm

Yes, Anubis is truly a valuable tool.

Mudge. - September 11, 2013, 1:07 pm

Avarage guide ;) Joke this is a very nice and detailed guide! good job will help out new people

#R00T~ - September 11, 2013, 1:13 pm

Great tutorial Business, very detailed and helped alot.

Business - September 12, 2013, 10:47 pm

Glad to see this helped you out. Let me know if you have any questions.

SUPER CHAMP - September 14, 2013, 10:34 am

Im using WINDOWS 7 and my firewall in advance setting even after setting it off is still blocking Inbound connections....please help :(

Business - September 14, 2013, 10:47 am

Make sure you hit apply before closing out of the window.

SUPER CHAMP - September 14, 2013, 11:10 am

(Sep 14, 2013 10:47 AM)Business. Wrote: [\[CITE\]](#) Make sure you hit apply before closing out of the window.

Ok even if the inbounds were blocked i managed to get that anubis notification on my DC...that means all right?

also where can I get the crypter that you have used, your link is not working

terrybart518 - September 14, 2013, 6:27 pm

thanks for the help will check it out :)

Business - September 14, 2013, 9:38 pm

I hope that this tutorial helped many of you!

Dialga - September 15, 2013, 1:42 am

On behalf of Blackshades, I vouch for the tutorial and the details on it.

Good job!

MythLegend - September 15, 2013, 1:47 am

Very Nice Tut..I am sure it will help a lot of people

LifeWireXXX - September 15, 2013, 3:00 pm

Thank you so much for this, really help me alot

Business - September 15, 2013, 3:02 pm

This is by far the best guide around!

Tebulot - September 26, 2013, 2:29 am

Yep, after trying a multitude of different things and scratching my head, then finally just leaving it for a few weeks, I'm coming back to ask for help.

Completely baffling, although I'm sure it's something small that I just wouldn't have thought of.

Business - September 26, 2013, 4:50 am

What are you stuck on? What is the problem?

Tebulot - September 26, 2013, 8:41 pm

I've followed the instruction to your guide, and several others (Just to see if I'm missing something that's assumed implied knowledge), port forwarding is all good, exe's are coming out right, and i've

tested on a few different computers to check connection, but no dice. I'm thoroughly stumped.

MaximS970 - September 28, 2013, 12:14 pm

Didn't work for me somehow :/

Please help, users are not loading.

Lona - September 30, 2013, 4:28 pm

thanx brothers???

laxcats - September 30, 2013, 4:47 pm

(Aug 9, 2013 01:27 PM)redpoison Wrote: [CITE](#) Really nice tutorial you have made... very nice work
This ^^ helped alot thank you man... gonna try this

Meitav - September 30, 2013, 6:52 pm

As Expected from Buisness, Detailed, Very Easy To Realize and Helpful!

Vouch for Buisness xD

iruogu - October 1, 2013, 12:08 am

This guide will really help everyone. Nice detailed guide. Thank you.

nick3127 - October 10, 2013, 2:49 pm

Really ??? Legit F*** off !

the are worst scammer they took my 650 usd and never replay me again !

i have opened tens of tickets they just keep closing them !

here is the proof ;

[img]http://cyprusismine.com/1.PNG[/img]

[img]http://cyprusismine.com/2.PNG[/img]

[img]http://cyprusismine.com/3.PNG[/img]

[img]http://cyprusismine.com/4.PNG[/img]

They are liars and thief DO NOT BUY ANYTHING FROM THEM !

Wyatt™ - October 12, 2013, 1:11 pm

Nick3127, This is not the place to put that. This is a tutorial, not a scam report.

I honestly think you overlooked something, its rare that I ever see any issues reported by the blackshades users.

[rant]

EDIT: You also posted this in 3 different locations. Don't break the rules just to flame, posts like this from asshats like you keep wasting kilobytes of data that could be much better used by someone with more intelligence.

[/rant]

themogwi - October 12, 2013, 2:57 pm

Big thank you to the creator! I'm sure this will help many.

?Jeff ?The ?Killer - October 20, 2013, 4:40 pm

Excuse me sir, I'm having this error while opening darkcomet

Is there a solution to it?

sannu3250 - October 20, 2013, 9:39 pm

great work .. fantastic thanks a lot ...

intenseq - October 26, 2013, 1:11 am

Sir do you have link for Dark Comet ... All the links are dead or network error on my computer ... Im a newbie in RAT ... Thanks Sir ...

Very nice tutorial Sir ... Thank you for this ...

ekjfinn - October 26, 2013, 9:02 pm

Quick question regarding Anubis and Blackshades. When I submit a sample through Anubis I don't get a notification unless this is what I'm supposed to be looking for:

Spoiler ([Click to View](#))

Any input?

Thanks for the guide by the way, one of the best I've seen on HF.

Martinped - October 29, 2013, 8:07 am

Hey Business. First of all. A VERY nice guide here.

Well explained in details for everyone.

But I have 1 question. When you upload the file to Anubus, and you get the result. under TCP Connection Attempts i find my own IP.

Shouldn't this be the no-ip IP who was here or am I wrong?

Digicult - October 29, 2013, 8:43 am

Best guide I ve ever read! Thanks a bunch

lloyd - October 29, 2013, 12:57 pm

wow this is a very good guide should help some people

intenseq - October 31, 2013, 6:39 pm

Sir thank you for this very nice guide ... But I cant do the port forwarding to work ...

On the site it always says Error: I could not see your service on on port (5050)

Reason: Connection refused ... Im using netgear Logged on the routers settings Went to the port forwarding section ...

add custom service ... Inputted the ipv4 address from the ipconfig from the cmd to the ip for the routers forwarding ip ... put 5050 at start port and 5050 on the end port ... Disabled the windows firewall as you advice and got the message "Allow all connections that do not have an exception to block the connection" ... but still the same error ... so I did the next part installed the Dark Comet put 5050 and listen on the socket ... then check on the site its still the same error ... so i tried on different port checker <http://www.ipfingerprints.com/portscan.php> the output is the this

Host is up.

PORT STATE SERVICE

5050/tcp filtered mmcc

... can u help me pls sir ... If i can try the RAT successfully i might buy some more tools if this thing does work ... Thanks alot sir Business ... ^_^

Im also willing to pay if you can help me setup this Sir ... Tell me your service price and lets talk Sir ... Thank You ...

FrogKing - November 16, 2013, 11:41 pm

Amazingly detailed tutorial. You never disappoint Business.

Business - November 17, 2013, 9:42 pm

Wow, glad to see people still use my tutorials! I am coming back to be more active!

hacki27 - December 5, 2013, 9:04 am

Hey, thank you very much for your tutorial. I learned very much ... :-)

x420xx - December 25, 2013, 3:31 am

thank you so much. the firewall part. I couldn't allow incoming connections. genius !! along with other things I had to figure out using 2 routers is a bitch.

but yeah awesome write up man

Sharplynx - January 17, 2014, 10:05 am

Bit of an old thread, but as far as I can see still up to date, and a great place to start! :)

Thanks a bunch, downloading now to have a look.

edit:

So, I think it worked :)

To be sure however, I would like to test it on another pc first before I spend money on an crypter.

Is there any safe way to do this? (in other words: how do I get the rat off the pc afterwards?)

rwj2010 - January 23, 2014, 10:04 am

This is an awesome tutorial...one of the best I've seen yet.

Thank Business.

Intelligent - February 6, 2014, 9:48 am

Yes indeed...awesome tutorial. Thanks for this post, is very helpful for beginners.

DreaM7155 - February 6, 2014, 9:59 am

Great tutorial. thanks for sharing.

Business - February 15, 2014, 9:41 pm

I wish everyone could see this, would help many new members.

Harpuia - February 15, 2014, 9:52 pm

Great tutorial, looks like you put a ton of time into this. Fantastic job, great contribution. Thanks for this, should help a bunch of people.

Bobbykart - February 16, 2014, 9:49 am

nice guide, it works fine. But can i use an other crypter? can u tell me one crypter that is for free?

Arcone - February 16, 2014, 9:51 am

This is a great Ultimate guide ! Great Man! ?

victiMusPrime - February 17, 2014, 9:02 am

Thanks for the tutorial, I just have one probably stupid question:

If my PC is off and the victim runs the stub, will I get that user when I turn on my PC or will that user be forgotten and lost?

Kevo - February 18, 2014, 1:30 am

AMAZING GUIDE. LOVE IT.

Easily the best guide I've used, thank you so much!

- New DarkComet user

Noshy - February 18, 2014, 2:56 am

I somehow destroyed my router, all my ports are now blocked ;_ ; , even 80,21,23
But i can still brows the internet? how?

victiMusPrime - February 18, 2014, 6:05 am

(Feb 18, 2014 03:56 AM)Noshy Wrote: [\[CITE\]](#) I somehow destroyed my router, all my ports are now blocked ;_ ; , even 80,21,23

Alfie94 - March 27, 2014, 2:37 pm

(Mar 27, 2014 01:12 PM)?usiness Wrote: [CITE](#) You didn't download the one I provided.
Thank you, I sorted that now.

I had to disable my anti-virus software because it kept deleting Dark Comet.

Ace tutorial, helped me setup my rat in no time.
Now I just need to crypt my stub and get going.

Business - April 7, 2014, 5:10 pm

If anyone wants to buy a lesson for setting these up I do them!

nicodemo - April 12, 2014, 10:41 am

hi, I use an internet key. I do not need to do port forwarding? is this a problem?

Kardo84 - April 15, 2014, 11:34 pm

Hi Business

I'm trying to get in touch with you for a lesson, can you hit me up with a PM with your skype or email.

sparker3x - April 18, 2014, 5:31 am

?usiness!!! Can you help me seup my jRAT 4.2.1 , i have vps .

i will be grateful meanwhile am new to jRAT.

Thanks for your understanding

please Business PM , i really need to hear from you.

can you PM me with your email or Skype or watsup

vulpixbrinley - April 18, 2014, 9:40 am

This is so awesome, very detailed! Thanks!

sparker3x - April 19, 2014, 1:49 am

Business!! can you help me setup my jRAT 4.2.1 ,MY Skype chyangel3

emento - April 19, 2014, 2:59 pm

Having a problem here.

My ports are open, well they only say they are open when Comet is open.

When I upload to Anibus nothing comes up, and also when I open it myself nothing happens. Any ideas as to why?

nicodemo - April 26, 2014, 11:28 am

excellent tutorial!

I do not have a router. I use 3G to connect to the internet. I can not do port forwarding. I could use a free vpn with port forwarding. What changes in the configuration of darkcomet and no-ip?

zolposter - April 27, 2014, 7:07 am

Great tutorial, many thanks. Gonne try it soon! Few Questions?

I wanne try this on a pc where i have acces to but wont his antivirus delete the file ??

And if i succesfully infect the pc i am worried more people will get in his pc and that i dont want.
Is the infected pc only your slave or do more people have acces to it?
Is it just enough if the file is on server or do you have to execute it too?
Most important question witch i dint find, i it possible to hack an extern pc without rats???
Sorry for the dumb questions....i learn every day, just new here. Thanks.

Jader - April 30, 2014, 7:44 am

This tutorial was amazing and easy to follow ?

Thanks alot!

toshiba99 - April 30, 2014, 9:09 pm

Am I the only one who clicked the first link for dark comet and proceeded to download files and only got malware everywhere? I spent the last 3 hours going through and deleting files like pc-monitor, some donation reminder, gorilla price and several others that would not delete and i had to go into the registry to delete all the files. I still think there is others because my computer hasn't been the same since. All i did was click the link and download the file that i was suppose to download and i got nothing but programs that had nothing to do with dark comet. This was the first time i downloaded from a link from hack forums since i mostly just read...

For about 15 seconds after the link is clicked there is an ad that has a small box on the top that says skip ad. Guess i clicked the download on the ad section and that is why it gave me all that junk.

Ragnarok666 - May 1, 2014, 11:34 am

thank you for this very detailed and good guide

Johann1 - May 1, 2014, 12:56 pm

This will kill about half of the newbie questions! Thanks!

choikom Matth - May 1, 2014, 5:21 pm

Great tutorial, should help out a lot of people on Hf.

toshiba99 - May 2, 2014, 11:00 am

I set up everything and it works i tried it on myself. But i was wondering if this method protects me from being traced? I have read a few tuts on how to prevent being traced back but none of them have mentioned crypting the stub, is it just implied that you will encrypt the stub or is that an extra step that will prevent being traced? I heard that encrypting isn't enough. I also heard about the guy cutefuzzypuppy that was a member here that got traced by the FBI and it seemed like he took a lot of steps to secure himself.

Business - May 2, 2014, 7:40 pm

The FBI has bigger fish to fry. You will be fine. Do the basic VPN hiding and you should be fine.

toshiba99 - May 5, 2014, 11:46 am

So basically i need a VPN that doesn't take logs and allows port forwarding. Then i create my no-ip account while using the VPN so they obtain the VPN Ip address and not mine and i also sign up using a fake email. That is pretty much what most of the forums i've read said.

And by the way this is the best tutorial I came across on how to set up a RAT.

DarkAbyss - May 5, 2014, 1:20 pm

Wonderful guide, thanks business, it helps me and should help alot of users

natedoge - May 6, 2014, 2:45 pm

Can you add me on Skype or something port forwarding seems to be my problem I have followed the guide and triple checked everything but still doesn't seem to work.

(FIXED)

King dox - May 15, 2014, 3:41 pm

beautiful guide, i am in middle of reading it. Hopefully i learn it!

Kardo84 - May 23, 2014, 11:45 pm

Hi, can you add me on Add me to skype
james.tedesco@outlook.com

I want to get lessons from you

GZgunner - May 27, 2014, 3:51 am

Awesome tutorial, helped me my first time through.

davydekwakel - May 27, 2014, 1:18 pm

Really nice tutorial you have made... very nice work

Business - May 31, 2014, 7:43 pm

Still a great tutorial, however I will advise that everyone stop using Black Shades due to recent events.

JamesMcGee - June 2, 2014, 12:30 pm

On my router, it asks for a game or application to create the port for. Dark Comet isn't there, and I don't know what to put anyway! Help!!!!

schwarzerpeter - June 2, 2014, 6:25 pm

Thank you very much for this nice Tutorial!!!

ImmaZoni - June 8, 2014, 10:48 am

Thank you! this guide was awesome, i have a question that you guys will think is a stupid one, but i'll ask anyways as i'm new to hacking. Will a rat remain open after the slave restarts?

beastmode197 - June 9, 2014, 7:55 pm

hey man i don't have a cyrter does it still work without it

sokratis123 - June 9, 2014, 8:47 pm

Great tutorial, it helped me a lot. Thnx.

syber33 - June 22, 2014, 3:40 am

This guide helped me so much but my antivirus is reporting backdoor when I turn on UpNP anyone know why?

Luma420 - June 25, 2014, 8:23 am

really good tutorial

but... i have a problem with the port.

if i want to setup the ports at my router settings i need to fill in ports like "0-0" why i need a dash?
anyone can help me

Azen - June 25, 2014, 11:31 am

(Jun 22, 2014 03:40 AM)syber33 Wrote: [\[CITE\]](#) This guide helped me so much but my antivirus is

reporting backdoor when I turn on UpNP anyone know why?
It is a false positive, add the file to your exemption list.

horstfuchs - June 25, 2014, 11:39 am

(May 31, 2014 07:43 PM)?usiness Wrote: [\[CITE\]](#) Still a great tutorial, however I will advise that everyone stop using Black Shades due to recent events.
Black Shades is great for those who needs shelter for long period for free.

necmedinkera - July 23, 2014, 10:59 pm

I followed all the tutorial slowly and surely (I think) but the port thing... got me messed up. I forwarded the port but i don't get it, why it doesn't work.
Any help would be great.
By the way thanks for the tutorial :)

NyxCoder - July 23, 2014, 11:08 pm

Really nice tutorial you have made... very nice work

gran4de - July 27, 2014, 12:11 pm

thanks for the detailed guide! it was easy to follow and it worked for me :) thanks again!

IJam - August 4, 2014, 7:32 am

This's just awesome, so detailed but the problem comes for me with Anubis, after uploading the file and trying to test it, the test goes on but nothing appears on my dark comet users list, anybody willing to help ?

corpionS - August 6, 2014, 1:19 am

I'm Having Problem! I Did Everything But It Won't Connect. Can Some Help?
It May Be My Ports But I Will Connect if Darkcomet Up running it's port but when Exited it Says Connection Refused on canyouseeme.

socalledhack97 - August 9, 2014, 5:55 am

Hi there does anyone know how to port forward a Huawei E5372 by any chance? I can't seem to get passed that stage, even though i deactivated everything on the firewall and Router firewall :?

oculism - August 11, 2014, 7:48 pm

I do not get no connection when I use the stub.... My ports are forwarded and everything to please help.

Younis Khan - August 12, 2014, 8:56 pm

This, along with the RAT Download, is amazing.
I just joined Hack Forums and I'm starting to feel welcome already.

Strayta - August 12, 2014, 8:57 pm

Awesome tutorial man!!! Helped heaps

Leozack - August 13, 2014, 3:48 am

People keep saying "I'd advise against blackshades due to recent events" - which events are they?

viewsonic1970 - August 16, 2014, 4:05 am

(Aug 13, 2014 03:48 AM)Leozack Wrote: [\[CITE\]](#) People keep saying "I'd advise against blackshades due to recent events" - which events are they?

The FBI has targeted the customers of a popular Remote Administration Tool (RAT) called 'blackshades', which allows them to connect and manage thousands of remotely infected computers

over the Internet.
reported to be customers who purchased it using Paypal .

Leozack - August 16, 2014, 4:54 am

Ah ... well that could happen for any RAT like product I guess :/ Another reason I don't really want to buy something when I only want it for 1 PC! :|

kylec35 - August 17, 2014, 10:02 am

Nice tut! Will try it out!

Thanks!!

Kuzerk - August 21, 2014, 11:30 pm

Thanks bruh :)

Helped lot's!!!!!!

:D :D :D very good as well

Gzing - August 24, 2014, 2:25 pm

hey guys, i really need help with my dark comet rat. few months ago i had it al set up and it was working fine but after reinstalling windows it doesn't work anymore... anyone know what would the problem be? clients just dont show up... tried using VM but the client still didn't pop up:(

Thanks in advance:)

pomwtin - August 24, 2014, 2:30 pm

did you do portforwarding again?

now you may not have the same internal ip as before

Gzing - August 24, 2014, 2:37 pm

yes, i did... on canyouseeme.org it says "Success: I can see your service on **.***.***.** on port (5050)

Your ISP is not blocking port 5050". thanks for reply:)

boxboxluxus - August 27, 2014, 1:52 pm

Nice work, well explained. Vouch for This dude!

Sikes - August 29, 2014, 9:07 pm

Whenever somebody asks for RAT help I always end up referring them to this thread. Thanks for posting this and including a clean download.

iKick - August 30, 2014, 3:10 am

(Aug 29, 2014 09:07 PM)Sikes Wrote: [\[CITE\]](#) Whenever somebody asks for RAT help I always end up referring them to this thread. Thanks for posting this and including a clean download.

I hope you also include to not use Blackshades ?

caara09bd - September 4, 2014, 10:15 am

This topic contains much more knowledge about RAT.

Thanks to topic creator.

labroca - September 4, 2014, 10:22 am

Good tutorial, but isn't black shades still backfired by like the FBI?

Business - September 4, 2014, 11:49 pm

Added:

-----NOTICE-----

DO NOT USE BLACK SHADES UNDER ANY CIRCUMSTANCES. THIS WAS WRITTEN A VERY LONG TIME AGO, WHEN BLACK SHADES WAS A VERY DESIRABLE PRODUCT.

I am like never on so excuse the unlabeled warning.

iKick - September 4, 2014, 11:54 pm

No problem

I just think it will help new people

therepower - September 6, 2014, 1:20 am

thank you for this tutorial helped me a lot :)

Hassan Gazi - September 14, 2014, 8:14 am

Great tutorial ? Thank you for writing this.

and if possible, please respond to this question:

<https://hackforums.net/showthread.php?tid=4446486>

I tried all your ways though none of them worked...

Thanks a lot in advance ?

sheikgod - September 14, 2014, 11:54 am

Thanks for this, really great for starters like me

Helped me out a load, good stuff!

atze44 - September 30, 2014, 12:39 pm

Hey,

this tutorial is very nice! It gives me some very important informations about rats, spreading, and other stuff

Now i can setup everything fine

thank you man!

Sn1perRd - October 7, 2014, 1:22 am

[censored] can be used in place of no-IP?

aeiro - October 8, 2014, 11:13 pm

thanks business. ill also be looking at your tutorial on this.

EDIT :meant to put this on the dl lol. oops

Root - October 8, 2014, 11:20 pm

nice u worked hard on it !!! keep up

Serendity - October 12, 2014, 7:50 pm

Amazing guide! I can see you have put alot of effort into this... Thank you!

smokie8099 - October 13, 2014, 10:22 am

Very nice and detailed tut....Thank u

tonybelas - October 17, 2014, 5:49 am

Very useful guide, thank you very much!

The Last of Us - October 17, 2014, 8:38 am

Nice guide for beginners.

Will help some people.

StayZoned - October 27, 2014, 12:00 pm

Great guide, its one of the best very detailed anyone could follow it

Bo Burnham - October 28, 2014, 5:05 pm

Love this guide :) I also love how quick and easy my R.A.T spread too! Thanks for making this.

Rommel Bellen - November 6, 2014, 3:31 am

Sir "Business"

- When i try to RAT my own computer
I can't see it , in USERS Tab . Why !?
But When I look to my Task Manager ,
the stub is working . But my PC won't pop
in my Users TAB !?

Note :

Im Using DarkComet

kushpvo - November 10, 2014, 1:49 am

Awesome tutorial !

I followed every step for the port forwarding and port forwarding trouble shooting, still i get an error!
:(

kushpvo - November 11, 2014, 4:23 am

(Nov 10, 2014 11:09 AM)Lalit Agarwal Wrote: [\[CITE\]](#) There can be many reasons, make sure your port is open.

To make it successful on own PC you need to put 127.0.0.1

what error are you getting?

when i open canyouseeme and check my port i get an error.

DarkComet is listening to that port.

firewall is off

there is an inbound rule for that port

CheeseCake1591 - November 14, 2014, 9:39 am

Thanks man, this helped me A LOT, do you know of any free crypters you could tell me about?

jddarknight8 - November 15, 2014, 2:26 pm

Hi i was wondering whether you could set up a RAT For Me? Im willing to pay the \$5 You said

coldbl00ded28 - November 15, 2014, 6:15 pm

I was testing it on my friend. The Popup worked but the RAT didnt really connect. I didnt get a notification in Darkcomet saying he has connected.

Something i did wrong? I followed the steps but didnt use a crypter. He got a popup saying Windows Protected you and he clicked run anyways. Then it popped up.

Any Help?

If you are willing to TeamViewer me then just PM me w/ skype and TV info

thuderlord - November 16, 2014, 5:45 am

My Dark Comet (final finished virus/stub) wont work. I did everything you did but when i try opening the stub with it says "exception EAccessViolation in module NBShell.dll at 005DC01, ect... Read of address 04670EE8. What do i do plz help!!

my email is hamar99@gmail.com plz help. And if you do and it works im willing to pay you \$20 cad (for the crypt program too)

My Dark Comet (final finished virus/scrub) wont work. I did everything you did but when i try opening the scrub with it says "exception EAccessViolation in module NBShell.dll at 005DC01, ect... Read of address 04670EE8. What do i do plz help!!

turbo813 - November 21, 2014, 9:11 pm

PM with some info on helping me get setup with a RAT

sooriya - November 23, 2014, 2:13 am

thank you. a great tutorial if can some one help me to bind my stub into a url.

clubberlog - November 23, 2014, 3:58 am

Thanks mate for sharing it. Appreciate it!

kloresies - November 28, 2014, 10:25 am

Hey business, if you can read this, can you pm me or something? Since I'm new I can't PM and would like some help. I'm willing to pay the fee.

Albertozinzogat - November 30, 2014, 3:17 am

A cautionary tale: Don't use NO-IP, it will land you in jail, it is run by FBI (seriously, not even kidding, not even remotely). either host your on dns or use alternative service like the ones I have mentioned below:

- 1-DuckDNS (High performing, free and reliable in terms of both performance and security, it is hosted on Amazon EC2, they also mask your hostname for free to prevent reverse look ups :D)
- 2- FreeDNS (free as the name implies lol, it is more reliable than NO-IP but I still prefer DuckDNS to FreeDNS)
- 3-DynDNS (It is not free, but it is very reliable)
- 4-EasyDNS (similar to FreeDNS but with more flexibility)

fulltimehobo - November 30, 2014, 1:34 pm

hey dood i want to buy your setup thing can you send me some contact information

DSMoDz - December 11, 2014, 9:22 am

Thankksss :D ITS WORKED! :) ???

smsmsms81 - December 11, 2014, 1:22 pm

I think you should change the title to settings up rat's in general

this tutorial explains all the nececarry steps in order to set up a rat

and blackshades is backdoored, if you haven't mentioned that in your thread, i suggest you do.

otherwise this is a real quality tutorial, good work Business! ?

OmicronCoder - December 11, 2014, 6:48 pm

Great tutorial! I don't have the money to buy razor right now, and I would like to know an alternative. I tried some but they seemed to only accept .bin files. Epic stuff you got dude.

iDover - December 11, 2014, 10:10 pm

Blackshades isnt around anymore for anybody trying to find it

Younis Khan - December 14, 2014, 9:37 am

Anyone know what happened to Blackshades? I'm just wondering because now no one uses it?

Anodise - December 14, 2014, 10:38 am

(Dec 14, 2014 10:37 AM)Maaz Wrote: [\[CITE\]](#) Anyone know what happened to Blackshades? I'm just wondering because now no one uses it?

The creator was arrested and the project was shut down. There's supposedly a few cracked copies every here and there, but it's not the best idea to use it if you find it.

MadNoobie - December 21, 2014, 10:57 am

hello, thanks for the helpful post, although i noticed one problem when i tested it on my sister's computer and the message that came up was something about that windows could not find the file or that the user was not able to access the project
please help.. ?

zps Shannon - December 22, 2014, 12:46 pm

this thread helped me alot. thanks for the help

billylathamx - December 24, 2014, 8:52 am

Amazing tutorial! Thank you so much for this, I've been looking everywhere for a decent tutorial on DarkComet!

Adiseye - December 25, 2014, 2:07 pm

Is this guide still viable? because of the date it was posted on...

Mysterious101 - December 25, 2014, 2:56 pm

Bye Bye Black Shades :/ :(
(Spamming :p)

JohnyDoejohn - December 26, 2014, 5:20 am

ahhh this is perfect! i tried it las year darkcomet is a great rat tool :) and free!
and your tutorial is perfect thank you!!!

TrippyHarold - December 26, 2014, 6:57 am

Beautiful tutorial, worked perfectly as far as I know (gotta try spread it and see.) I used another Crypter and it still seemed to be all good. Thanks mate.

Lawnl - December 26, 2014, 9:57 am

i have a VPS at this moment and i cant open the ports, i cant send you a pm but can u help me with this?

acsnaara - December 26, 2014, 11:33 am

Im gonna try and use this one tonight.....should be interesting

IDAnonymous - December 26, 2014, 1:12 pm

Thank you so much for this guide. It helped me out a lot!

louij2 - December 27, 2014, 4:19 am

(Aug 9, 2013 12:05 PM)?usiness Wrote: [\[CITE\]](#) There are many crypters out there, but I will be showing you how to use Razor Crypt...

Hey,

I was looking at the RAT Tutorial and I got to this point where Razor Crypt is required, I went on their website and it says they no longer accept Paypal, temporarily, if possible can you send me the program or recommend something else I can use that achieves the same functionality of Razor Crypt.

terrystone45 - December 27, 2014, 5:10 am

i need the dark comet zip file please no one should rat on me

JohnnyRingo - December 27, 2014, 2:18 pm

Omg seems like years to make this. Anyway, nice guide man. really helped me ALOT

pranksta02 - December 31, 2014, 12:20 pm

can i get a skype mesage from someone willing to help me with this stuff. I have the RAT, Darkcomet, and the crypt. I just need help with stuff on the crypt. Please skype me, White_boy67 (and no im not racist .-.)

Simply™ - December 31, 2014, 4:03 pm

Thanks for this. A few confusing parts but I'll try this when I get back from vacation.

Simply™ - January 2, 2015, 6:36 pm

(Aug 9, 2013 01:51 PM)Understalker Wrote: [\[CITE\]](#) As always, a mothafuckin detailed guide. This shit is long as fuck, and should help EVERYONE with their RAT issues.

IrmbedicGains - January 2, 2015, 9:37 pm

As always, a mothafuckin detailed guide. This shit is long as fuck, and should help EVERYONE with their RAT issues.

Alexwinter - January 5, 2015, 3:31 am

Hello my friends, i have some troubles with port forwarding. I forwarded it almost everywhere, but the problem is still on. DC stub don't have any connection to a programm.I have no idea, what is conflicting and don't make the connection go. I rely on your mind power and logic. help pls!

ps: I'm from Belarus, and that's why, my English might be bad, but i think you will solve this prob.

geldour - January 5, 2015, 11:27 pm

this is amazing, so well put together and i thank you!

now, im up to the part where i need to crypt the file, but, i dont know how or where to get one :/ free one would be preferred as i only intent to use this on 1 computer (LAN)

Bomb ass in a cast - January 6, 2015, 12:14 pm

VERY useful guide. Set up DarkComet completely! Thank you very much! Can you link me to somewhere I find more in depth information on encryption?

paxo - January 6, 2015, 1:40 pm

great stuff man! will try it asap and report the result ;)

DyDxAkoSiDre - January 6, 2015, 5:18 pm

I have a question.. I've done everything on the "port forwarding" part except for the BlackShades VPN.. but i still get a closed port on that 5050.. I'm using a laptop and Windows 7 OS with WI-FI connection.. I strongly think that the WI-FI part is the reason it's still closed.. Am i right on this idea?

RancorsRectum - January 7, 2015, 8:07 am

This is a incredibly comprehensive guide on Rats and thank you for taking the time to create it. Would you advise connected via ethernet as opposed to wireless for setup/spreading?

N3XUS - January 10, 2015, 11:19 pm

Is there any way I can get it on their computer without them downloading anything, or with going to a website and it auto downloads without them knowing

King Exchanger - January 12, 2015, 6:18 pm

Helped me so fucking much thanks man!!

Best TUT around.

Andalay - January 12, 2015, 7:48 pm

This could be very useful to people who need it!, good work

Bucky - January 12, 2015, 10:45 pm

If this doesn't help confused people I don't know what will!

Last Resort - January 13, 2015, 1:04 am

Very nice tutorial.Will help alot of membes out.

scousejft96 - January 21, 2015, 2:25 pm

Wow, thats fucking excellent, exactly what i wanted to know all in one long tut, seriously matey THANKS for that i appreciate you taking the time to write that up Thanks a lot bro.

:-) :)

Darkmist124 - January 22, 2015, 11:25 pm

Thanks man you really helped me out.

Business - January 23, 2015, 8:48 pm

I am glad that this post helped so many people!

890popbox - January 24, 2015, 8:39 pm

amazing guide got me ratting already.

PacketsYo - January 24, 2015, 11:22 pm

Extremely helpful. THANK YOU very much

vb555 - January 30, 2015, 1:36 am

ONE OF THE BEST TUTORIAL I HAVE EVER SEEN HERE
SALUTE MATE!

The Scarabian - January 30, 2015, 5:32 pm

Thanks for providing this Very detailed tutorial.

Spooky Skeleton - January 30, 2015, 5:56 pm

Amazing and very detailed tutorial.

Chuckie00 - January 31, 2015, 2:53 pm

Hello! I'm new to the whole RAT buisness and I'm confused at one detail. Where exactly do I get razer crypt from?

antonyc - February 1, 2015, 5:25 am

Nice tutorial man. Chuckie00 the same question i have't to ,but decidet to make de RAt with winrar maybe will halpe you u

My op is w 8.1

I've followed this tutorial step by step until razor crypter ... i've decided to make my stub with winrar and darkcomet directly, after that i sent the stub to my laptop with w7 starter that is connected to internet with the wireless from same router that is the pc but his directly with cable from router to try the RAT...when i've logged on in darkcomet i don't have any victims on it .. what is the problem?

Can be the difference of windows ?

MysticMC4TW - February 1, 2015, 12:06 pm

If you got lost at the Razor Decryptor part, download this cracked version: [www . sharesend . com/wbo494zu](http://www.sharesend.com/wbo494zu) (remove the spaces between the periods)

Else, it will expose your stub as a virus immediately after you send it to someone.

Vouch x9001 for the awesome guide.

mast3rJ - February 2, 2015, 3:55 am

one of the best guides/tutorial on that site...

there is jut one thing i would change and that just a little thinggy
try to use another formatting for better and much easier reading.

in general your tut is really good, nice srceens and a understandable language for beginners...
so: congRATs :D

bananarama86 - February 2, 2015, 6:40 am

Awesome thanks for your help man! <3 such love much wow

The Red Wedding - February 3, 2015, 8:40 pm

Thanks for this. Quick and easy. I did everything you said, and it was making sense!

WhoKid - February 5, 2015, 7:30 pm

Please contact me over skype : whokid.cs

I would like to set up mine.

Business - February 6, 2015, 9:02 am

(Feb 6, 2015 05:18 AM)Vynide Wrote: [\[CITE\]](#) I'm still waiting... I sent the payment in the morning and now its 10:11 pm

Please i have paid you. I'd like you to help me now.

Refunding you :) NO patience, I even told you I would do it today.

antonyc - February 9, 2015, 11:17 am

Again thx for your tut ...my rat work's fine ?....after 3 attempts I managed to make one that goes almost perfect the first did not work at all and the second should be accessible every day to

appear in the client and not disappear the third ... it looks like does not have these problems?

exitnode - February 10, 2015, 2:26 am

awesome share buddy, used to be a rat fan but i prefer botnets to rat now.....vouch

xtwistmodzgz - February 11, 2015, 9:27 am

nice tut but wtf on the backdoor the darkcomet.exe has a backdoor so it means its touched before.....

lognion12345 - February 11, 2015, 5:15 pm

Msg me skype i want you to setup a rat (GoogleThats) thanks dude

Business - February 14, 2015, 10:39 pm

If anyone needs help setting this up privately I do lessons! PM me for more details.

kielly32 - March 7, 2015, 9:35 pm

I did everything right, port is open and all but it never shows up in the users list. After trying 3 tutorials so far -.- Can anyone help?

And no im not going to pay someone to tell me whats wrong. Don't have money to be wasting like that.

MrNacho123 - March 8, 2015, 10:33 am

This is how I got started. Great tutorial

Business - March 8, 2015, 7:16 pm

If anyone would like private RAT lessons, I can help in many ways. I can go in-depth, or just do a quick setup and let you play with it, depending on how much you would like to pay. Please contact me if you would like to learn about RATs from the best there is.

incognitov - March 8, 2015, 7:22 pm

tacto - March 9, 2015, 5:02 am

Great tutorial. Nice and simple. Thanks

Keytone1 - March 10, 2015, 1:45 pm

Great little tutorial good read:):):)

bingles - March 11, 2015, 12:19 am

Great tutorial, really helped, Thanks man :)

Nanaz - March 23, 2015, 12:10 am

Thank you so much!~! Everything works perfectly and you're explanation was immaculate. Cheers! :)

learnnow - April 2, 2015, 10:38 pm

hi, great info. could you please mention a RAT that can install without administrator right? and doesn't need open port(client side), and can also do USB sharing. I tried PM but I need to get my level up. thank you

kaosity - April 16, 2015, 3:31 am

I have port forwarded and set up my stub and it works on canyouseeme and everything but when I sent it to my other computer and downloaded it, my other computer never showed up in users, does it take a while to show up....

8008135 - April 17, 2015, 10:23 pm

Hey,

I got everything else working, but I can't seem to get it through the security on my friend's computer?

It says it's harmful content and won't open it, how can I go around it?

Thx in advance

Business - April 28, 2015, 2:25 pm

Still the most in-depth guide in the entire section. Please ignore BlackShades, very old thread. I refuse to delete that section, because I worked so hard on this post. :)

SIM-2212192 - April 28, 2015, 4:10 pm

(Apr 28, 2015 02:25 PM)?usiness Wrote: [\[CITE\]](#) Still the most in-depth guide in the entire section. Please ignore BlackShades, very old thread. I refuse to delete that section, because I worked so hard on this post. :)

Thanks for the guide/, hopefully it will lead to a decrease in PF help threads/other technical problems.

PranNksteR - April 28, 2015, 6:10 pm

Dumb question... but what's the point of portforwarding? Also I use my apartment complex's guest wifi.. do I still need to port forward?

Business - April 28, 2015, 6:14 pm

(Apr 28, 2015 06:10 PM)PranNksteR Wrote: [\[CITE\]](#) Dumb question... but what's the point of portforwarding? Also I use my apartment complex's guest wifi.. do I still need to port forward? It opens a port to listen to the connections you will be receiving.

If anyone needs any help with a RAT, let me know.

glysce - May 2, 2015, 4:06 pm

What's wrong with black shades? FBI stuff?

Business - May 5, 2015, 3:06 am

Will be making one of these for Babylon RAT soon!

shewoa - May 7, 2015, 10:56 am

ok, i manage to set everything up...and its working!

but i have some weird question, if anybody can help me...

when i put my no-ip.biz adress and port like 1604 nothing showed up in DC, but when i put ip/dns 127.0.0.1 or 192.168.1 its working on my comp, when i put the same rat in my laptop its doesn't work, but again when i change ip/dns to 192.168.1.3 (ipv4 of my laptop) than rat working fine...

so, is this mean that i must know my victims ipv4 when i making rat or what?

I am still new to ratting so i try to figure things out...any help is more then welcome :)

its Only Me - May 8, 2015, 4:55 am

(May 1, 2015 04:06 PM)?usiness Wrote: [\[CITE\]](#) If anyone needs any help with a RAT, let me know.

Hi Business, I downloaded the DC from your link and it works fine, I have followed all the tutorials and tested it on another computer I own and all was fine.

I need some advice as I have hit and miss reconnection issues with the infected computer when its restarted, sometimes it connects to the DC control panel straight away and other times I cannot get it back under control? Any ideas on whats wrong or if there is anything in the control module that I need to use to reconnect?

c from hf - May 9, 2015, 6:46 am

Can I just say how helpful this page has been, could not understand why my stub worked once and that was it, Firwall setting I would of never seen on my own PC, Thank you

jacob12d - May 9, 2015, 6:47 am

Business could you please come on teamviewer to help me meeting id is m98-741-453 as im still having trouble

ANON.PURGED - May 9, 2015, 6:52 am

That hilarious long guide and hilarious text font. Some nerdy cant read it.

Anyways its so good. Some beginner will learn i hope so.

jacob12d - May 9, 2015, 6:53 am

anon.purged would you be able to help me setup darkcomet?

dutch meeting is : m24-755-725

Business - May 11, 2015, 4:38 am

I just revamped this entire thread to be more current. It is once again the leading guide for your Dark Comet setup needs.

Powder - May 11, 2015, 10:44 am

Nice guide. Everyone can see that you put hard work into this.

LordOfAngmar - May 11, 2015, 11:37 am

before I get started on this process, excellent guide by the way, how will I use the rat? How will I know when the a computer is added to the network, will antivirus pick up the exe, and what from there to actually access the computer? I really need this to work.

Business - May 11, 2015, 11:48 am

(May 11, 2015 11:37 AM)LordOfAngmar Wrote: [\[CITE\]](#) before I get started on this process, excellent guide by the way, how will I use the rat? i get thanks. but one question the server.exe i execute in the victim pc can be delete or must stay in his pc?

Business - May 12, 2015, 12:41 pm

(May 12, 2015 12:36 PM)nynnnn Wrote: [\[CITE\]](#) i get thanks. but one question the server.exe i execute in the victim pc can be delete or must stay in his pc?

If you want to stay connected to a computer the file must still be present on their computer. If their AV detects it your connection will be lost.

Jar. - May 12, 2015, 12:41 pm

This guide is very useful and easy to follow, thanks for sharing!

nynnnn - May 12, 2015, 6:49 pm

i dont know if were superantispyware or avg but the server.exe was remove from te pc victim i follow all the steps in this tutorial and didnt work

edit: oh wow i have a surprised the same sample.exe and crypted like say in this tutorial one day ago or two the page virus total only were detected by 4 of 57 Antivirus (avg dont detected) but now i analyze the same file an with the updates of d antivirus were detected by 17 of 57 including avg that now detect it and says: AVG Autoit_c.BYBS 20150512. i think the only way it change the antivirus

Business - May 12, 2015, 6:52 pm

(May 12, 2015 06:49 PM)nynnnn Wrote: [\[CITE\]](#) i dont know if were superantispyware or avg but the server.exe was remove from te pc victim i follow all the steps in this tutorial and didnt work

Did you purchase a crypter and crypt your stub?

ratje2000 - May 30, 2015, 5:49 am

Thank you for this tutorial. I have a few follow-up questions though. Please if you reply try to keep in mind that I am a complete beginner.

I have succesfully followed all the steps up to the crypting part. Basically because all of the steps were free up until the crypting part, and I'd like to know exactly what I'm purchasing before I start spending money.

I understand so far that crypters are used to make sure the stub is undetected by antivirusses and firewalls. So yesterday I decided to try and test out my stub with a friend who shut down the firewall and AV for me. It worked, and I have tested some of the functions of the RAT. However, when I started DarkComet today, he was no longer there, while he was still online. Is this because he turned his AV/Firewall back up? Or maybe because he has to restart the stub every time he reboots for it to work? Or something completely different?

Also, I have noticed that crypters often have a price per month, that is relatively high for a student like me. Since I really only want 1 stub to be undetectable since I'll only want to be using this 1 RAT for a longer period of time (I think, unless there is a good reason not to, again I am a beginner), and have no interest in crypting more files, I was wondering if it's not possible to have a one-time payment to have my stub crypted.

I apologise if my questions are noobie. I'm just looking to create 1 RAT usable for an extended period of time, that is going to be undetected (because I plan on using it with some people I actually know), that will not require them to open the stub every single time they turn on their computer themselves. I hope you can help me.

Thank you in advance.

SIM-2362145 - May 31, 2015, 1:40 pm

I hope you can help me.

Thank you in advance.

Regardless you will need to get a crypter. Your friend did not show up in DC while they were online after restarting is because you did not have the "start-up" feature enabled while creating the stub. Even if you did, I don't think it will work as most of Darkcomet's features are outdated.

Now regarding the crypters. You will need to invest whether you like it or not. 1 Stub getting crypted for let's say \$2 from a crypting service will last you 3-4 days max. Those crypted files are not forever, they will get detected eventually. So that is why paying for a crypter is crucial as you can update-upload-and-execute your stub to your victims before it gets detected.

If you have any more question, PM me.

fwedrick - June 7, 2015, 2:11 am

I am having problems with the DUCK DNS settings, it keeps telling me I have an incorrect domain or token however I know for a fact they're both correct.. Can anyone help me with this?

Incendiary. - June 7, 2015, 2:12 am

Make sure your domain doesn't include the @duckdns.org part.

If still nothing PM me and I can try to assist over tv
