Thread: [PrettyBoot FREE CUSTOM stresser source](#)

DogEatsDog - August 10, 2013, 7:03 am

I've decided to release my source to the public, free of charge.

What is it?

It's a stresser source I started selling a few months ago.

Is it a retheme?

No it's not, I am the sole creator of this source, it's not based on someone else's stresser source.

What are the features?

A list containing most of the features: Full-fledged user system, easy to manage

News system, supporting BBCode

Full PayPal integration, fill in your PayPal e-mail and you're ready to go!

Advanced API server support, any server with any parameters possible!

Advanced stresser page (read Github for more info)

Blacklisting of IP's and Skype's, you can even sell blacklisting!

Customise the stresser on the back-end as Admin

Manage your sales and see your profits

User-friendly support system

Sleak design that is also easy to customise

Built with AJAX technology to enhance user experience

Built upon one of the best PHP frameworks, Laravel 3.2

How do I get it?

Visit the Github repo of it, here:

<https://github.com/rogierkn/PrettyBoot>

As the source is now open, please if you find any code that shouldn't be in it, report it to me over here at HF or at Github!

And last but not least, you're welcome ;)

Screenshots

Pinhead Larry - August 10, 2013, 1:30 pm

Should've sold this, it doesn't look bad at all. Ha-vent seen the PHP side yet though.

1n9i9c7om - August 10, 2013, 1:37 pm

Wow, this looks really nice. Nice work!

Ego Inc - August 10, 2013, 3:31 pm

Looks nice I guess... Too many of these coming out lately tho...

?lpha - August 10, 2013, 4:48 pm

Awesome stresser source, it's nice that you give it out for free.

DogEatsDog - August 11, 2013, 3:48 am

(Aug 10, 2013 01:30 PM)Unknown789 Wrote: [\[CITE\]](#) Should've sold this, it doesn't look bad at all. Ha-vent seen the PHP side yet though.

I've sold this over 20 times like 4 months ago and decided I'll just release it as I won't be doing much with it anymore

(Aug 10, 2013 01:37 PM)1n9i9c7om Wrote: [\[CITE\]](#) Wow, this looks really nice. Nice work! Thanks!

(Aug 10, 2013 03:31 PM)Tux. Wrote: [\[CITE\]](#) Looks nice I guess... Too many of these coming out lately tho...Take it or leave it :P

Thanks :)

temp_1007091 - August 11, 2013, 5:27 pm

Nice source, but then again this is bootstrap. Looks pretty though.

Project Evolution - August 11, 2013, 9:22 pm

Looks like vDos, Thanks for the download though :)

DogEatsDog - August 12, 2013, 5:06 am

(Aug 11, 2013 05:27 PM)temp_1007091 Wrote: [\[CITE\]](#) Nice source, but then again this is bootstrap. Looks pretty though.

Only the buttons and labels look like Bootstrap

(Aug 11, 2013 09:22 PM)Project Evolution Wrote: [\[CITE\]](#) Looks like vDos, Thanks for the download though :)

IIRC, I wrote this source before vDos v2? was written

it doesnt matter - August 12, 2013, 5:47 pm

Can someone analyse this to see if it has any backdoors / unwanted code before I use it? thanks.

DogEatsDog - August 13, 2013, 4:33 am

(Aug 12, 2013 05:47 PM)it doesnt matter Wrote: [\[CITE\]](#) Can someone analyse this to see if it has any backdoors / unwanted code before I use it? thanks.

Shouldn't be any in it, if found, please report it to me :)

SkyRider2 - August 13, 2013, 4:34 am

Wow looks amazing man! keep the good work up.

ricky0226hackz - August 14, 2013, 8:46 am

Im having a problem with the code ive just started learning how to make stresser's about a month ago. I have not seen one like your's and it says

Call to undefined function Laravel\mcrypt_create_iv()

/home/blackha/public_html/laravel/crypter.php on line 36

I heard something about find a php.ini file and mabey theres like a ; inifrt if mcrypt but idk if you can tell me how to fix it. That would be great thanks.

manos1313 - August 14, 2013, 11:36 am

Very Nice Share Thank in advance man ;)

ImBrandon - August 14, 2013, 12:59 pm

Yo The Source Isnt Working. Tried On Two Sites I Get This

Unhandled Exception

Message:

Undefined offset: 6

Location:

Got PHP 5.3.7 +?

ImBrandon - August 14, 2013, 1:16 pm

Says 5.3 PHP It That Good Or What? Its A Werid Host.

DogEatsDog - August 14, 2013, 1:40 pm

(Aug 14, 2013 01:16 PM)awsomehackz21 Wrote: [\[CITE\]](#) Says 5.3 PHP It That Good Or What? Its A Werid Host.

Needs to be atleast 5.3.7, ask your host to upgrade yours.

ImBrandon - August 14, 2013, 6:03 pm

I Changed It To 5.4 Is That Alright? I Still Get The Error??

DogEatsDog - August 14, 2013, 6:16 pm

(Aug 14, 2013 06:03 PM)awsomehackz21 Wrote: [\[CITE\]](#) I Changed It To 5.4 Is That Alright? I Still Get The Error??

Look up how to install Laravel, I can't help you much further.

ImBrandon - August 14, 2013, 8:39 pm

So It Asking Me To Login So I Click Register And Then It Says This.

The requested URL /user/register was not found on this server.

iBones - August 14, 2013, 11:11 pm

(Aug 14, 2013 08:39 PM)awsomehackz21 Wrote: [\[CITE\]](#) So It Asking Me To Login So I Click Register And Then It Says This.

Your htaccess is probably not set up, or maybe you put the whole thing in public_html instead of just the public folder.

akosicamar - August 16, 2013, 2:47 am

Can I put this on free hosting website ? :D
~35 character makes me mad :(

DogEatsDog - August 18, 2013, 6:12 am

(Aug 16, 2013 02:47 AM)akosicamar Wrote: [\[CITE\]](#) Can I put this on free hosting website ? :D
~35 character makes me mad :(

Yes you can if it has the requirements for running Laravel.

Fly By Night - August 19, 2013, 12:28 am

(Aug 18, 2013 06:12 AM)DogEatsDog Wrote: [\[CITE\]](#) Yes you can if it has the requirements for running Laravel.

And which free hosts have the requirements for running Laraval?

DogEatsDog - August 19, 2013, 4:03 am

(Aug 19, 2013 12:28 AM)Fly By Night Wrote: [\[CITE\]](#) And which free hosts have the requirements for running Laraval?

No idea, I run my stuff on VPS'es, which you should do anyways.

Repentant - August 19, 2013, 12:13 pm

I'm having the same error as
ricky0226hackz

Call to undefined function Laravel\mcrypt_create_iv()

/home/blackha/public_html/laravel/crypter.php on line 36

I don't know how to fix this can you please help me out?
How can we enable that?

DogEatsDog - August 19, 2013, 1:54 pm

(Aug 19, 2013 12:13 PM)#Reaper Wrote: [\[CITE\]](#) I'm having the same error as

I don't know how to fix this can you please help me out?
How can we enable that?

Googling the error gives you the solution, instantly. But anyway, you'll need to install the mcrypt module for PHP.

niram34 - August 22, 2013, 8:18 am

(Aug 14, 2013 11:11 PM)iBones Wrote: [\[CITE\]](#) Your htaccess is probably not set up, or maybe you put the whole thing in public_html instead of just the public folder.

Hey i have set up it up properly with the htaccess and its all in the public_html, but that still comes up as not there?

DogEatsDog - August 23, 2013, 4:49 am

(Aug 22, 2013 08:18 AM)niram34 Wrote: [\[CITE\]](#) Hey i have set up it up properly with the htaccess and its all in the public_html, but that still comes up as not there?

Is your folder structure like:

public_html / root
- application
- bundles
- laravel
- public
- storage
- .htaccess
- paths.php

niram34 - August 23, 2013, 6:47 am

Does the source have server rotation for the APIs ? ;)

H0t Sh0ts - August 23, 2013, 7:20 am

That's a very nice stresser source.

I think it's very HQ, even though it's free.

DogEatsDog - August 23, 2013, 7:58 am

(Aug 23, 2013 06:47 AM)niram34 Wrote: [\[CITE\]](#) Does the source have server rotation for the APIs ?
;)No it does not.

(Aug 23, 2013 07:20 AM)H0t Sh0ts Wrote: [\[CITE\]](#) That's a very nice stresser source.
I think it's very HQ, even though it's free.
Thanks. It was on sale for a few months and did well.

niram34 - August 23, 2013, 8:30 am

How does it work then, does it choose a server randomly and uses that? or?

DogEatsDog - August 23, 2013, 8:47 am

(Aug 23, 2013 08:30 AM)niram34 Wrote: [\[CITE\]](#) How does it work then, does it choose a server randomly and uses that? or?
Full power.

If you're competent you can easily add in your wanted algorithm in application/models/booter.php

Repentant - August 23, 2013, 8:22 pm

Hey, well recently I tried setting this source as follows:
I tried setting everything up inside the "www" Folder instead of "public_html"
and on the folder "public" I renamed it to "public_html"
and It's still giving me the same error.

DogEatsDog - August 24, 2013, 2:06 am

(Aug 23, 2013 08:22 PM)#Saint Wrote: [\[CITE\]](#) Hey, well recently I tried setting this source as follows:

and on the folder "public" I renamed it to "public_html"
and It's still giving me the same error.
Renaming one thing won't magically change all other set variables. the .htaccess redirects to a public folder, not public_html

callmeblezz - September 9, 2013, 3:03 pm

juggared50 - October 8, 2013, 1:11 pm

Thanks for this source, very beautiful :)

furious - October 8, 2013, 5:59 pm

i get this error not sure why

<https://gyazo.com/7a070619285ee16b8499a7a15c992cf9.png>

EDIT: dont worry sorted it wasnt on in php settings

Wow this source is amazing!!

The skype resolver and geo location also work!

My servers are down atm but could you tell me how the stop button works , will it work for chargen attacks too. do i have to set it up to?

But great work anyway!

Sib3r - October 9, 2013, 11:49 am

Hey man got my server added and everything but it says my attacks aren't registering when I hit the start booting button it comes up in the status log saying the attack sent but I see nothing on my dstat and also it says there are no attacks running and no past attacks also it does not show up in my attack history.

Now just to be clear I copied the example api from the server add and input the variables myself simply just adding the 1.1.1.1 and 80 and such and it works fine. So if you can please get back to me with this and hopefully we can get it fixed.

zombieman - October 10, 2013, 7:26 pm

Nice design and it seems like an excellent source, kudos to OP. Can't believe you're giving this out for free O_o.

Anyways, people, if you get that mcrypt error, either install mcrypt or go through the code and replace it with another crypting function such as md5 or sha1.

DogEatsDog - October 11, 2013, 6:45 am

(Oct 10, 2013 07:26 PM)zombieman Wrote: [CITE](#) Nice design and it seems like an excellent source, kudos to OP. Can't believe you're giving this out for free O_o.

Anyways, people, if you get that mcrypt error, either install mcrypt or go through the code and replace it with another crypting function such as md5 or sha1. Because it became pretty leaked, and I had earned enough off of it.

Sib3r - October 11, 2013, 1:06 pm

Can you help me with my issue please I have no issues with anything but your source does not send attacks and the autobuy is not activating users and not showing sales. Like I said when your site outputs my url from the edit in the server overview page I copy and paste it into the url and manually put 1.1.1.1 and 80 and 30 for the time and it runs perfectly fine so its your source.

Also your pm quota was reached so there may be others that are trying to get in touch with you.

furiious - October 11, 2013, 6:26 pm

I have the same problem as Sib3r cant seem to get my API to work.

It says sent attack but no attack is sent on my server my API works on my other source so must be this source really want to use it can you help?

DogEatsDog - October 12, 2013, 4:28 am

Are you sure you have cURL installed?

DogEatsDog - October 12, 2013, 4:28 am

Are you sure you have cURL installed?

Sorry for the double...

Darkflyer - October 12, 2013, 5:38 am

Hey DED,

Could you add me on skype again?

I've got a question about the source I've ever bought of you?
It works now, but the email activation doesn't work T.T

Sib3r - October 12, 2013, 10:13 am

Yes it is installed for me. Like I said its your source.

DogEatsDog - October 12, 2013, 10:15 am

(Oct 12, 2013 10:13 AM)Sib3r Wrote: [\[CITE\]](#) Yes it is installed for me. Like I said its your source.
Source runs fine on over 10 different setups, it's your setup.

Sib3r - October 12, 2013, 10:37 am

I'm using a hosting that I have always used also I tried three different sources with that use curl and they work fine.

furious - October 12, 2013, 11:47 am

Yeah i have curl on my other source works with other sources for me to

Sib3r - October 12, 2013, 7:56 pm

Stop blaming it on us and check it out for yourself because it does not work.

DogEatsDog - October 13, 2013, 4:51 am

That's weird, it's working over here...

Sib3r - October 13, 2013, 5:59 am

Then how could it not be working for us?

barfoo - October 13, 2013, 8:28 am

(Oct 13, 2013 05:59 AM)Sib3r Wrote: [\[CITE\]](#) Then how could it not be working for us?
Why don't you do some debugging instead of crying on a thread?

Sib3r - October 13, 2013, 8:35 am

Why don't you look at the situation and see that I do not know this framework that he is using and on top of that to find a file I'm looking for is about impossible. Also there is no error on the files its just simply not working so I can't really do any debugging.

zombieman - October 13, 2013, 12:26 pm

I uploaded the source to a free shared host and it's running perfectly without any problems at all. If you need help, PM me and stop bugging OP.

DogEatsDog - October 13, 2013, 1:02 pm

(Oct 13, 2013 12:26 PM)zombieman Wrote: [\[CITE\]](#) I uploaded the source to a free shared host and it's running perfectly without any problems at all. If you need help, PM me and stop bugging OP.
Thanks, finally someone that can actually setup

Sib3r - October 13, 2013, 2:41 pm

Well thats good that it works on a free shared host where it can get banned at any moment but that really doesn't do shit for us that have paid hosts. I gave up on this hours ago anyways.

keesvvaal - October 13, 2013, 3:55 pm

Looks nice for me and thanks for the share. =]

barfoo - October 13, 2013, 4:29 pm

where it can get banned at any moment but that really doesn't do shit for us that have paid hosts. I gave up on this hours ago anyways.

Worked fine on a fresh VPS that had just had LAMP installed. And that negative rep was cute, bro.

Sib3r - October 13, 2013, 5:00 pm

I am glad you really care about rep.

barfoo - October 13, 2013, 5:09 pm

(Oct 13, 2013 05:00 PM)Sib3r Wrote: [\[CITE\]](#) I am glad you really care about rep.

I don't care about rep. I can see that you do, though. You cared enough to make a number which represents nothing 3 lower than it was. Woah.

Sib3r - October 13, 2013, 5:40 pm

You care because your crying about it. I was expressing my opinion about you.

barfoo - October 13, 2013, 5:44 pm

(Oct 13, 2013 05:40 PM)Sib3r Wrote: [\[CITE\]](#) You care because your crying about it. I was expressing my opinion about you.

Crying? I'm not crying. I'm laughing. And that's cool, do whatever you want. I just find it sad that you care about a number in a database.

DogEatsDog - October 14, 2013, 12:50 am

If you're going to bitch to each other, do it in PM, that's all I ask.

furiious - October 15, 2013, 3:24 pm

OP i still cant seem to get it working can you help i know its working for overs but it isnt for me

?Genocide(X) - October 19, 2013, 7:09 pm

Looks Pretty but I get errors. Alright went to SPAM.com did everything described for the installation. When trying to access the the site its blank. Did some research on Laravel. Edited the htaccess to RewriteRule ^public/(.*)\$ \$1 [R,L] Started to see some output http://i40.[censored].com/2cpxpba.png When trying to access either of the directories I get this http://i39.[censored].com/2uqp3ph.png. Any recommendations?

TRH4CK - October 19, 2013, 11:34 pm

Damn :O

It's sexy as hell xD

Would use this template for a BackEnd I need to code for someone :P

Ascii blocks most php coding which could be a threat to their servers so your best choice is try different hosting or buy one of their vps's

Try these.. <http://www.groundservers.org>

MR_PuMPEDupKIKS - October 28, 2013, 7:15 am

(Oct 27, 2013 10:35 PM)Vexah Wrote: [\[CITE\]](#) Ascii blocks most php coding which could be a threat to their servers so your best choice is try different hosting or buy one of their vps's

(Dec 6, 2013 01:12 PM)Mercer Wrote: [\[CITE\]](#) Vdos2.0 did it & it works well.

Cant cheat the system!i'm not going to build in a check for each existing and public API setup, you however, are free to build it, isn't hard.

BigDap - December 6, 2013, 10:29 pm

Before anyone Installs this - It's incredibly Open to all users:

XSS = very possible.

Most if not all the Lib's (js) are avail to users to read for one..

Secondly the source is good, but it's not secured, at all.

Before you use it please hard-code in some security.. Being very serious.

It is a very reliable and great source, but needs security patching.

DogEatsDog - December 7, 2013, 2:16 am

(Dec 6, 2013 11:29 PM)giggerbaited Wrote: [\[CITE\]](#) Before anyone Installs this - It's incredibly Open to all users:

(Dec 8, 2013 09:59 PM)Morda Wrote: [\[CITE\]](#) I thought I already did bro..on github :)
And I couldn't replicate those, so either they are false or they are bad at showing where.

hexinarray - December 9, 2013, 10:01 am

I got this up and running any good API to use with this lol thanks :)

BigDap - December 13, 2013, 9:26 am

(Dec 7, 2013 03:16 AM)DogEatsDog Wrote: [\[CITE\]](#) Then tell me where you can find the security flaws so I can fix them
Check the register page on any running form of this.. you can XSS the scripts.
Once in the logged in area you can XSS more.

Mainly the Register.

Also, the plan page - buy; can be changed to .01 and successfully charged and activated for accounts.

also to note: I'd pay 3x more if this were in just php, and not laravel (don't know laravel, tis why).

BorisGrigoryan - December 13, 2013, 2:17 pm

thank you, this looks grate! going to look at the php side.

DogEatsDog - December 13, 2013, 4:07 pm

T0ucaNSaM - February 20, 2014, 8:02 pm

sharing is caring thank you for the source. Will use to learn not copy

(Aug 10, 2013 07:03 AM)DogEatsDog Wrote: [\[CITE\]](#) I've decided to release my source to the public, free of charge.

What is it?

It's a stresser source I started selling a few months ago.

Is it a retheme?

No it's not, I am the sole creator of this source, it's not based on someone else's stresser source.

What are the features?

A list containing most of the features: Full-fledged user system, easy to manage

News system, supporting BBCode

Full PayPal integration, fill in your PayPal e-mail and you're ready to go!

Advanced API server support, any server with any parameters possible!

Advanced stresser page (read Github for more info)

Blacklisting of IP's and Skype's, you can even sell blacklisting!

Customise the stresser on the back-end as Admin

Manage your sales and see your profits

User-friendly support system

Sleak design that is also easy to customise

Built with AJAX technology to enhance user experience

Built upon one of the best PHP frameworks, Laravel 3.2

How do I get it?

Visit the Github repo of it, here:

<https://github.com/rogierkn/PrettyBoot>

As the source is now open, please if you find any code that shouldn't be in it, report it to me over here at HF or at Github!

And last but not least, you're welcome ;)

Screenshots

Spoiler ([Click to View](#))

i was looking through the source and have a question???

KEY `id` (`id`) << on last line for create table if NOT EXIST
^^^^

is the ('id') << a foreign key?

Oke thanks i will do that soon. Thanks for help.

O,o how i get Api or servers for booting with?

cornmcorn - March 4, 2014, 6:19 am

Could you show how to add API's? I have no idea how too.

MEME123 - March 5, 2014, 3:38 pm

Hey this is really nice source, but when I attempt to access the booter to create an admin account (after setting up the mysql database and configuring the database.php) I get this error on the page: Unhandled Exception

Message:

Undefined variable: c_unique

Location:

/usr/lib/php/head.php on line 48

Can anyone help me out? Thanks again for the nice source!

Dysnomia - March 14, 2014, 10:42 pm

Vouch for DogEatsDog Legit Guy.!! And i personally love the source.

Guess what... They used my source, written by me and myself.

UHD69 - March 18, 2014, 11:48 am

why would any webhost block this? obviously if you're using it commercially I can see that happening due to complaints but the site itself only generates web based traffic right? it's the API you're connecting into that would be generating the traffic.

Have you used this with the empire booter API?

DogEatsDog - March 18, 2014, 11:51 am

(Mar 18, 2014 11:48 AM)MrAn0n69 Wrote: [\[CITE\]](#) why would any webhost block this? obviously if you're using it commercially I can see that happening due to complaints but the site itself only generates web based traffic right? it's the API you're connecting into that would be generating the traffic.

I have never ran a booter, I am a programmer that fulfills the wishes of the people.

Reticulum - March 18, 2014, 11:56 am

Posting to come back, I'd like to experiment around with this. Thank you!

ItsFluffy - March 18, 2014, 2:35 pm

awesome release, im about to try to make a web stresser tonight so thnks for this

UHD69 - March 18, 2014, 5:25 pm

Is there an easy way to disable user registrations in this?

Also when forcing SSL via a rewrite rule, it breaks some of the menus, as in you click them and nothing happens until you go back to http. I've found one setting in laravel which is set to true, however seem to be missing another setting elsewhere.

DogEatsDog - March 19, 2014, 7:02 am

(Mar 18, 2014 05:25 PM)MrAn0n69 Wrote: [\[CITE\]](#) Is there an easy way to disable user registrations in this?

Not a problem with Laravel. I hardcoded most URL's in the source, you're going to have to find them all and replace them with https://.

Disabling user registration can be done, but you'll have to do it yourself.

ItsFluffy - March 19, 2014, 1:11 pm

@DogEatsDog, is there anyway I can burden you to help me out?

It's been years since I've setup a web source and I really need to learn how to do it from start to finish.

I'm trying to set one up for private use and was really hoping I could get your help via teamviewer or something similar so I can learn the whole process

DogEatsDog - March 19, 2014, 1:57 pm

Immortal - March 23, 2014, 12:27 pm

I forked it, I plan on adding a plugin system and a one time use login code via my Authcode (<https://github.com/Immortal-/Authpanel>) Once I finish Ill send them to <https://github.com/Immortal-/PrettyBoot-v2> and then make public the plugin development api. nvm I take all of this back.. I forgot how much I hated larval until I took a look at the source. The hatred is mainly fueled my ignorance because every time I take a look at larval based sites I get brain fucked.

DogEatsDog - March 23, 2014, 12:44 pm

(Mar 23, 2014 12:27 PM)Imm?rtal Wrote: [\[CITE\]](#) I forked it, I plan on adding a plugin system and a one time use login code via my Authcode (<https://github.com/Immortal-/Authcode/>) Once I finish Ill send them to <https://github.com/Immortal-/PrettyBoot-v2> and then make public the plugin development api.

If it is really good you could open a pull-request and I'll happily merge it into PrettyBoot.

Jallu - March 25, 2014, 5:02 am

Holy damn that's smexy, great job!
Pretty sure you could have gotten more sales.

where do i get this PDO extension? Thanks OP

DogEatsDog - May 16, 2014, 3:28 pm

(May 16, 2014 03:09 PM)DarkAbyss Wrote: [\[CITE\]](#) where do i get this PDO extension? Thanks OP
I assume you're hosting at a shared webhost, not a VPS, which means you are most likely SoL.
Unless they are willing to install/enable PDO for you.

What I suggest, rent a VPS (DigitalOcean is a good hoster) and install everything in this "tutorial"
<https://www.digitalocean.com/community/articles/how-to-install-linux-apache-mysql-php-lamp-stack-on-ubuntu>.

Then it will work without a doubt.

Deadbeef - May 16, 2014, 4:48 pm

(May 16, 2014 03:28 PM)DogEatsDog Wrote: [\[CITE\]](#) What I suggest, rent a VPS (DigitalOcean is a good hoster)

Don't use DigitalOcean for this kind of thing. They really care about what's happening on their servers, you risk getting your account closed once your booter starts to be a little known. They're great for legit stuff though!

DerekM - May 16, 2014, 10:39 pm

(May 16, 2014 04:48 PM)Deadbeef Wrote: [\[CITE\]](#) Don't use DigitalOcean for this kind of thing. They really care about what's happening on their servers.

I can back that statement up as they suspended my account several months ago for something very similar to this.

Quote:Digital Ocean: Injurious Code

3.11 Subscribers may not use the Services to distribute, receive communications or data gleaned from, or execute any action directed by any type of injurious code, including but not limited to: (i) trojans, (ii) key loggers, (iii) viruses, (iv) malware, (v) botnets, (vi) denial of service attacks, (vii) flood or mail bombs, (viii) logic bombs, or (ix) other actions which DigitalOcean reserves the sole right to determine to be malicious in intent.

OP, thanks for sharing your code with the community. ?

DogEatsDog - May 17, 2014, 4:13 am

(May 16, 2014 04:48 PM)Deadbeef Wrote: [\[CITE\]](#) Don't use DigitalOcean for this kind of thing. They really care about what's happening on their servers, you risk getting your account closed once your booter starts to be a little known. They're great for legit stuff though!

I don't host malicious things so I don't know about that.

~Tom~ - May 17, 2014, 4:36 am

This was the biggest mistake ever, now once the skids have realised how to install Laravel it's all over the marketplace.

DogEatsDog - May 17, 2014, 5:02 am

(May 17, 2014 04:36 AM)~Tom~ Wrote: [\[CITE\]](#) This was the biggest mistake ever, now once the skids have realised how to install Laravel it's all over the marketplace.

I know, and none of them even say "thanks". But what would you rather have, this being leaked all over the place or an official release from me?

~Tom~ - May 17, 2014, 5:03 am

(May 17, 2014 05:02 AM)DogEatsDog Wrote: [\[CITE\]](#) I know, and none of them even say "thanks". But what would you rather have, this being leaked all over the place or an official release from me?

None, you could of easily encoded it yourself and used it for you or self it.

DogEatsDog - May 17, 2014, 5:08 am

(May 17, 2014 05:03 AM)~Tom~ Wrote: [\[CITE\]](#) None, you could of easily encoded it yourself and used it for you or self it.

I sold it, enough to be set for a while but then retards started leaking it and I don't want my creations to be seen as some leaked source.

DerekM - May 17, 2014, 5:27 pm

(May 17, 2014 05:02 AM)DogEatsDog Wrote: [\[CITE\]](#) But what would you rather have, this being leaked all over the place or an official release from me?
I agree with you.

Litespeed did the same when they got to all his coding, might as well officially share it.
The alternative is letting the assholes leak/edit it and feel powerful.

Ryandwyer00 - May 17, 2014, 11:26 pm

I have a problem, when I press login, register, ect, it says "No Input File Selected"

Wow.....Thanks Mr . Nice source, :)

matchettb - February 19, 2015, 10:22 pm

THanks this is perfect for what i need.

?Genocide(X) - February 19, 2015, 10:25 pm

(Jan 30, 2015 08:27 AM)OG-MAKING-MONEY Wrote: [\[CITE\]](#) Can anyone help me install this? I think some links are broken, or I messed up the database. lol

?

What version of php are you using?Nothing is broken and I must warn u free hosting is not for this.

SooHigh - March 15, 2015, 5:38 pm

i need help please add skype hitlerboy1234

Kindermc - May 13, 2015, 6:43 pm

Can anyone help me set this up? will pay :)

my skype: KinderServer

R A B B - May 14, 2015, 9:59 pm

GREAT WORK!

Im gonna check it out

HFTetramorph - May 15, 2015, 2:58 pm

I swear I have seen that theme before somewhere.. When did you initially code this? I remember seeing this when a client asked me to setup a stresser before..

DogEatsDog - May 23, 2015, 5:50 am

(May 15, 2015 03:01 PM)Yani Wrote: [\[CITE\]](#) Well, the post is from 10-08-2013 and this guy is the original coder.

Shiit, been gone for like 6 months.

Yeah, I wrote this in February 2013, released it for free due to leaks somewhere in August 2013.

FFY00 Loko - June 16, 2015, 3:38 pm

WoW, its very pretty! Tanks bro!

TrikiWiki - July 23, 2015, 12:08 pm

Thank you for the leak bro!!

xMGx - August 2, 2015, 4:42 pm

Its not a leak, he is the creator and thanks for the source creator :D

hahdbwoannniabs - August 3, 2015, 8:55 am

Since this thread is still being b.umped for some reason I'm just going to say that it's vulnerable to RCE. The filter you put on layer 7 attacks can still be bypassed by certain bash metachars.

I don't see why retards like you don't just use escapeshellcmd() (along with filtering %) rather than typing out a big regex filter.

HitItHarder - August 4, 2015, 9:27 am

This source looks good, but I am not able to set it up, I placed the source and database.sql and configured db.php file properly but when I load the site, it doesn't load at all. Instead give me apache test page.

Any solution?

koekblik2 - August 12, 2015, 5:54 am

i can't register myself it's missing files or something could you help me?

DefineVital - August 29, 2015, 4:31 pm

Does anyone know where I can get my hands on a "FREE" hard hitting DDoS UDP flooded that runs on it's own dedicated servers?

LewisAkaFlout - October 18, 2015, 11:33 am

Thanks mate imma go use this :)

1Shot - October 19, 2015, 8:54 am

Nice release. Will use it for learning booters again!

imuffinsx3 - January 14, 2016, 3:08 pm

Thanks :)) this looks really fucking ood

BN26 - March 14, 2016, 5:23 am

Thanks for sharing this OP!

SilentAssassin15 - April 16, 2016, 12:23 pm

Which part has the login area??? Also can you please add me on skype and help me out?? skype: diamondmaster873@gmail.com

DogEatsDog - April 19, 2016, 4:57 pm

Are people really still using this?

testalex7777 - May 16, 2016, 11:25 am

merci l'amis cela va m'aider

gamingvpn - May 21, 2016, 4:04 pm

thank for sharing this source

hurstybro - October 16, 2016, 1:58 am

Hey, I tried installing this but it's just showing /Index of and all the files you provided. Laravel is required for this run? I don't have a public_html folder only the public.

xHeaven - October 16, 2016, 3:02 am

Laravel is required for this run? I don't have a public_html folder only the public.

Just copy ALL files from the .rar to the xampp/wampp or webserver root directory.

xampp example: C:\xampp\htdocs\put_all_files_here

Zotima - October 18, 2016, 11:26 pm

I've seen this a lot on other forums for free since the past 3 months.

I4va - November 23, 2016, 6:18 pm

great booter 10/10 i think i dont really care

OKNAR - February 24, 2017, 1:57 pm

Woow thanks dude I gonna try it out

CASTIEL - February 24, 2017, 2:02 pm

the fact people still use this, just, surprises me..

VPN - February 25, 2017, 5:49 am

I don't think it's even allowed on hf anymore.
