Thread: [Slicing your PSD | Actions Quick Tip | PSD to HTML](#)

b0lt - August 10, 2013, 2:53 pm

Slicing images for a web design can really be a pain in the butt. To make things quicke

and easier I have created a Photoshop Action. This is how I slice up my PSD, but there are a lot of different ways as well. Feel free to post your method of slicing below.

The download link is in the YouTube description.

Video Tutorial:

Handy little action. Your voice is a bit hard to understand but decent tutorial.

Thank you. I will get a better mic once I know it will be worth it.

Not saying yours is wrong, but here's another version of PSD to HTML

I've found this guy to be very helpful

That is a whole different tutorial. My tutorial is just about slicing your PSD for coding it. And he is doing the whole designing, slicing and coding.

But yes, he is pretty helpful. I watched his series once.
