Well, I'd like the VPS, Debian. I'd run a game server off of it: SA:MP, Minecraft, or some RSPS

purplemilkftw - August 11, 2013, 12:22 pm

Hi, I want this VPN since I get DDoS'd alot since my brother was stupid enough to mess with someone... Anyways I'm tired of VPN's that have ad's and everything and not enough money for a paid VPN so why not give this a try.. Thanks for this contest and I'm thankful even if I win or not.

I'd like to use it as a file holder, whilst my laptop goes in for repairs.

All other free VPS's I get somehow mess up before the time I need it to, which causes me to lose files..

As I'm sending my laptop for repairs soon, this will be very ideal for me, as I'm booking it in for about a month or two, due to some major damage and I cannot store the files anywhere else, as there is too much space required.. 40GB should cover it though.

Thanks man. Good luck everyone. ?

Jack Bauer - August 11, 2013, 10:35 pm
