Thread: [\[TuT\]\[Webbased\] IPban System](#)

The-One - April 15, 2010, 11:17 am

Hello,

What do we need?

Webhost

VB. Program

Make a new .txt file. Name is IPs(must be .txt)

Put in the IP for the people(s) you don't want you to use your program.

'NOTE, Use my other thread [To get the user's IP](#)

Code Public Sub BanCheck()

Dim wc As New WebClient

Dim MyIP As String

Dim BannedIps As String

MyIP = IP ' Used from my YourIP code, look in my other thread

BannedIps = wc.DownloadString("www.yourwebhost.com/IP.txt").ToString

If BannedIps.Contains(MyIP) Then

Timer1.Stop()

MsgBox("You have been banned from the server, if you want to get unbanned agin, email: nevergonnahappen@banned.ban", MsgBoxStyle.Information, "<YourProgramName>")

Me.Close()

End If

wc.Dispose()

End Sub'

Timer1 Code ' Interval like 2000

Code BanCheck()

Form1.Load

Code BanCheck()

Timer1.Start()

Enjoy.

Gent - April 15, 2010, 12:01 pm

This is awesome. I'll definitely use this.

Thanks, yeah, I had fun with it to :P

D.O.A - April 16, 2010, 5:40 am

this is quite good for me

The-One - April 16, 2010, 5:41 am

Glad i'd helped you

Spoiler ([Click to View](#))

toshort

lyncsta - April 16, 2010, 5:49 am

this is good man thanks, iv done stuff like this before and if u changed it around you could make this a serial checker and make the ip list the serials that work and if you want to ban a serial just remove it

The-One - April 16, 2010, 5:51 am

Better use HWID.

Nice idea though.

ActimeL - April 17, 2010, 11:51 am

I add to mines admin functions :D..

Scrat - April 20, 2010, 1:19 am

lol that's going to be interesting :)

lyncsta - April 20, 2010, 7:35 am

lol im so dumb lol good job

Bitwin - April 20, 2010, 8:05 am

Great, as said before maybe more useful / secure to use HWID because IPs are changing often if they don't have static

The-One - April 30, 2010, 5:33 am

True, although, this is a great starting option. HWID would be the same thing, only we don't check IP but HWID.

-Sorry for late reaction, couldn't reach hackforums server

msuper28 - April 30, 2010, 6:52 am

thanks it's good for hwid, isn't it?

it can ban only static ip and no-ip too?

The-One - April 30, 2010, 7:48 am

it can ban only static ip and no-ip too?

If you make, each time someone does a action, and then sends it IP to a FTP server.

And check for a IP-ban each time, then yes. I already made the same system, with the Username of the users, and the HWID ofcourse.

rapidguide - May 8, 2010, 9:47 am

great

to shrt-----

50GTB - May 8, 2010, 9:48 am

awsome i will use this too!

No problem goodluck!

hellhammer - June 30, 2010, 11:03 am

im geting error on this line, why ? should i add my ip ?

MyIP = IP ' Used from my YourIP code, look in my other thread

You will need another function to obtain the IP thread =

<https://hackforums.net/showthread.php?tid=368752>

You can also download it via ftp.
```

You must be sure that it really downloads the file, if the guy's bright and disconnect from internet, it wont download your txt file.

I also have a question, does it still work if you use a proxy?

The-One - August 24, 2010, 7:53 am

No because it gets the IP of a website which gets the IP from the current user..
