Thread: [How to setup a putty booter?](#)

Psilocin - August 12, 2013, 11:02 pm

I have my linux server right here, I need a tutorial on how to set it up as a putty booter. I'd love a tutorial or some help

IPv6 - August 12, 2013, 11:04 pm

Helping OP set up booter as we speak.

Genesis Coupe - August 12, 2013, 11:05 pm

If IPv6 doesn't succeed, hit me up in a PM. I'll be more than happy to help you.

Oak? - August 12, 2013, 11:06 pm

All you need to do is to download the putty client.

You will also need to install whatever DOS script you want to run on your VPS.

Step one: Download Putty.

Step two: Download WinSCP.

Step three: Download python through WinSCP with the 'yum install python' command.

Step four: Drag your DOS Script to your root directory in your ftp manager (WinSCP)

Step five: Make it so your permissions are 0777

Step Six: Login to putty with your VPS information type "perl NameofDOSScript ip, port, time".

Ignore the commas above.

Psilocin - August 12, 2013, 11:11 pm

For some reason, when I logged in via putty the first time it worked perfectly. Now it wont access for the username or even say "login as"

FIXED

Now it wont access for the username or even say "login as" It seems like its having trouble connecting to the server, make sure the IP and the port is correct. If you get it going and you havent gotten it set up yet, I'll do it for you.

Hmm you do know the password does not show what you type right?

Are you using port 22 for SSH?

Make sure you don't have a proxy setting enabled on putty.

If you are running a VPN or have a firewall that could be messing with the connection I would disable them.

(Aug 12, 2013 11:19 PM)Oak? Wrote: [\[CITE\]](#) Read my updated post.

I had to constantly edit it because I kept changing what I wanted to write and how I wanted to

phrase it. Removed mine :p. Im not sure about this but do some hosts do shared IP's for VPS's? His hosting company might be getting a ddos attack on that server .-,

Psilocin - August 12, 2013, 11:24 pm

I fixed it, using something different then putty. Thanks for the help, now I just need to know how much power this hits out

Daddy???????????? - August 12, 2013, 11:26 pm

I can help you with this, If you need any help still with anything PM me, If not hope someone solved your problem.

Help with what? The original issue or the issue of finding out how much it hits out.

Normally that would be determined by the bandwidth upload speed of your VPS.

Also throwing this out there, Most VPS hosting companies catch on to people using their Servers as DOS tools quite quickly.

I would advise only doing it for learning or teaching situations only.

I bought off some guy from HF who owns them, he said it wont go down so yea. If you can help out with the output of it hit me up

thanks by the way for the help

Are you sure he owns the Servers himself or is he just leasing them.

To actually own a server it would cost quite a bit of money to open the computers up.

In there TOS they normally write that if anyone asked under the right circumstance of law they can disclose your information for safety reasons.

I'm pretty sure he owns them. But yea, I really need a way to find out the output. I'm curious to see what it is.

Best way would to ask the guy you bought it from.

I doubt you want to go through all the trouble of testing it yourself.

You asked "How to Setup a Putty Booter?" Well I can help you out with your issues and I mean all of them, I know a lot about SSH Clients "PuTTY Booters" and whoever you bought your Server from you should be talking to them about the issue of not being able to connect to it if you are doing ever thing right anyways.

This tutorial might be helpful for you:

<http://www.cyberciti.biz/faq/linux-unix-test-internet-connection-download-upload-speed/>

I also found this program to make it easier.

Have never used it so be cautious but the reviews are good.
