Thread: [BlackShades NET vs BlackShades Stealth?](#)

Raziobiologic - August 13, 2013, 2:26 pm

Which is better and why?? I'm thinking about buying one but can't decide which.....?

Decompiler - August 13, 2013, 2:28 pm

There are hundreds of threads in the recent past discussing this.
Please learn to use the search bar

kamika\$e - August 13, 2013, 2:32 pm

I would personally recommend Blackshades NET, because it has more features at the moment.
It really depends on what target you will be aiming at, if the person uses a Mac I recommend Blackshades Stealth.

Hopsin - August 13, 2013, 2:36 pm

It all depends from your needs and purpose. If you provide those, I can give you my opinion which one and why.

nbaprofo - August 13, 2013, 2:39 pm

If you own a Mac and be able to run the RAT, you should go for Stealth. Stealth has a faster remote webcam and desktop stream but has less features than NET. Make sure you understand too that Stealth's stubs can't be opened on a Mac, only on Windows.

vodka1087 - October 1, 2013, 5:16 am

that's 100% true. blackshades stealth should only be used if you are not on windows.

Demonstinger - October 1, 2013, 5:38 am

I like stealth because of the speed and I can use the client on my linux OS system. But I heard NET is also good, its your choice!

vodka1087 - October 1, 2013, 10:33 am

Yeah, works perfectly on Linux. Got it also working on MAC though.

thankyouu - October 1, 2013, 11:18 am

i recommend blackshades stealth if you are on mac or linux. if you rare are on windows then net is the best rat to stick with

Main.stream - October 12, 2013, 10:46 am

blackshades net. it's so damn easy to make money from its stealer

h2ck3r - October 13, 2013, 8:56 am

(Oct 12, 2013 10:46 AM)Main.stream Wrote: [\[CITE\]](#) blackshades net. it's so damn easy to make

money from its stealer

That's mainly why I also suggest Blackshades NET. I've heard from so many that it's so easy to make money from it.

Cha0 - October 14, 2013, 10:07 am

I don't know why people are saying you should use Stealth if you're on Mac. NET works on Mac too.

The difference is that Stealth is a stripped down version of NET which makes it faster and able to handle more connections, but obviously it has less features than NET.

Cha0 - October 14, 2013, 11:12 am

(Oct 14, 2013 10:12 AM)MarketExpert Wrote: [\[CITE\]](#) Depends on how you define striped down. As far as I know and as I could see with PEiD NET is completely coded n vb6 (the controller and the bot)

Stealth is coded in java and c (controller in java and the bot in c).

Stealth can be used Windows of course but you know when things are coded in Java, i get a feeling that it's not meant for windows somehow.

I'm 100% sure both NET and stealth work on all major operating systems. (Windows, Linux, Mac)

MarketExpert - October 16, 2013, 2:39 pm

Yes they do indeed. Wish NET was native for MAC. That would be a dream.

No complaints, it's still the best RAT for Windows.

Blackshades NET. I'm a Windows user and that's probably why I like NET better.

I never go to try Stealth myself but I saw it in action when it was running on my friends MAC. Pretty fast and so but it doesn't have that many features, making it quite boring.

Omgklutch - October 17, 2013, 3:20 pm

Blackshades NET is probably slightly better. It has more features than any other existing RAT and it has been as the best RAT for years.

prizraka666 - October 18, 2013, 1:33 pm

there is no way you can compare these RATs. blackshades is without any doubt better and the best RAT one can get

Demonstinger - October 18, 2013, 1:58 pm

Both are great RATs, this question is asked a lot of times. If you want something easy then get NET, if you want something with speed then get Stealth.

prizraka666 - October 19, 2013, 5:57 am

Blackshades NET is better. There is a reason why it's the most popular RAT here.

1nf3c7 - October 19, 2013, 6:53 am

It depends on how you are going to use it, BlackShades NET has more features than Stealth, BlackShades Stealth is a fast RAT which does not need to be port forwarded.

WiNE - October 19, 2013, 8:44 am

Blackshades NET is better, it's their best product.

No Honor - October 19, 2013, 9:27 am

Basically All Depending On How You Work With It Man You Feel Me? BlackShades NET I Prefer Best.

Marketiers_boy - October 20, 2013, 7:13 am

Blackshades NET is by far the best RAT here. I have read about some people owning most paid RATs on HF and saying how Blackshades beats the shit out of all those.

Well, I'm also one of those. Don't waste your money on any other RAT.

prizraka666 - October 20, 2013, 4:55 pm

Blackshades NET is absolutely the very best RAT one can get here.

ugobest - October 21, 2013, 4:16 am

Blackshades NET! We all know it's been the best RAT out for many years with most features.

aka007 - October 28, 2013, 4:23 pm

Yes, Blackshades RAT is the best RAT out there.

You won't really find something even as close as good as it.

Prehtends - November 1, 2013, 6:01 am

Blackshades NET is the best. It beats Stealth easily.

DarkWombat - November 5, 2013, 4:39 pm

Blackshades NET is a better alternative. It has much more features and makes it easier for serious RATTING.

apt-get money - November 6, 2013, 3:08 am

I'd suggest to get Blackshades NET. Blackshades stealth is good, but it is really basic. If you're running on Linux Blackshades Stealth would be your thing.

alexbeck - November 6, 2013, 5:46 am

I would be EXTREMELY happy if somebody breaks down what are the differences between the two in details.

All I keep reading is "BlackShades NET has more features than Stealth". Yeah cool, but neither the website explains the actual differences, or somebody here has done so...

?nxy - November 6, 2013, 7:49 am

Blackshades NET is what you wanna get, trust me.

alexbeck - November 6, 2013, 7:54 am

I trust you. But the reason why I even have this dilemma is that everybody says Stealth is faster and it could be run from a linux system.

Varrock - November 6, 2013, 10:01 am

Blackshades .NET , stealth is garbage.

Shanks - November 6, 2013, 12:24 pm

There is hundreds of threads about this, I personally recommend NET.

Shabloski - November 13, 2013, 8:44 am

I have read tons of similar threads, but yeh, blackshades net is what most people prefer. Including me!

Doxicity - November 13, 2013, 9:53 am

I'd recommend that you closely analyze the threads and descriptions of both products before buying them, to get an understanding of what each RAT does. Blackshades Stealth is helpful in that you can use the program on a MAC, and other operating systems. It also has some of the fastest desktop and webcam viewing speeds. It is limited in it's features though, and doesn't have as many as Blackshades NET. IF you're only RATING for the basic viewing features, than I would suggest stealth. If you plan on using all or many of the features of a RAT, I would suggest Blackshades NET. It's speeds aren't as good as Stealth, but they are still decent. Honestly, why not buy both though? If you own NET, you get stealth at a discounted price, and they are both great products. You could always buy just NET, and if you end up deciding you want stealth too, you can buy it later for that discounted price.

Good luck with your decision, I hope this helped steer you in the right path.

blackshades - November 15, 2013, 6:32 am

Personally, I like Blackshades Stealth. I like it for being simple to use and very rapid. Have a look at the recent reviews made for Blackshades Stealth.
