Thread: [Cmd Prompt has been disabled by you administrator...](#)

Marker - April 15, 2010, 10:23 pm

Oh god Its getting annoying. All i wanna do is use the shutdown -i command at my school. Any ideas? run is blocked, and any batch file just pops up command saying its disabled. ?
new()fag (one word) wordfilters to smith btw

Irelandrulz2 - April 15, 2010, 10:25 pm

This is like this at my school too. I'm afraid there is nothing you can do. ?

'ProHacking - April 15, 2010, 10:27 pm

Same at my school... It sucks..

olo - April 15, 2010, 10:32 pm

Yeh This Happends At My School
Open Up Notepad And Write

@echo off
Command
@echo on

Save As A .bat and your good :P

PleasantBeing - April 15, 2010, 10:37 pm

(Apr 15, 2010 10:32 PM)olo Wrote: [\[CITE\]](#) Yeh This Happends At My School
Open Up Notepad And Write

@echo off
Command
@echo on

Save As A .bat and your good :P
yup thats exactly what you do

go to the start button find search and then search for notepad then put this in it after that open it up and create a own admin account for your self that should give you a tad more things to do but it'd be only on that workstation not school wide

Irelandrulz2 - April 15, 2010, 10:39 pm

(Apr 15, 2010 10:32 PM)olo Wrote: [\[CITE\]](#) Yeh This Happends At My School
Open Up Notepad And Write

@echo off
Command
@echo on

Save As A .bat and your good :P

Even that method still fails. CMD still says the command prompt has been blocked my administrator.

PleasantBeing - April 15, 2010, 10:40 pm

whoops i forgot to say make it command.com

manndi - April 15, 2010, 11:17 pm

im just wondering for what do you need cmd at school?

Irelandrulz2 - April 15, 2010, 11:19 pm

(Apr 15, 2010 11:17 PM)manndi Wrote: [\[CITE\]](#) im just wondering for what do you need cmd at school?

So you can access site's and do all sorts of other shit.

Marker - April 19, 2010, 3:57 pm

(Apr 15, 2010 11:17 PM)manndi Wrote: [\[CITE\]](#) im just wondering for what do you need cmd at school?

all i wish to use it the shutdown -i command. >:3

gerald311441 - April 19, 2010, 4:03 pm

You can't do a shutdown -i without an administrative account on the network, even if you have CMD access.

Marker - April 19, 2010, 4:07 pm

I can when im using computers at a nearby college campus. I shut off computers randomly. well not anymore, i'm banned from them lol.

godsp33d - April 19, 2010, 6:38 pm

Since no one here has posted a real technique ... here you go

<http://www.multiupload.com/BXTQWO3CTO>

[IMG]http://i40.[censored].com/10ypekw.png[/IMG]

inside are a couple of tools:

team godspeed manager - unlocks task manager

enable-disable - unlocks regedit (does other things but only one i use, and only one iv tested on the program for that matter)

registry editor - emulates regedit, but does need regedit unblocked to use

unblock cmd.reg - unlocks the command prompt via registry editor - needs regedit unlocked to use

unlock regedit.bat - unlocks registry editor - needs cmd unlocked

and the .ocx file is just because my schools computers need it installed to run VB exe files

so basically if you want to use cmd, just run...

1- enable-disable - unlock regedit

2- unblock cmd.reg

--and your done-- note: to close enable-disable just use task manager and end the process

credits:

team godspeed manager - me

enable-disable - 88power88

registry editor - unknown author, got from google

unlock cmd.reg - unknown author, although simplistic script

unlock regedit.bat - unknown author, but yet again simplistic script

if you download this and like it ... i request a thanks :d

Beautiful thank you!

?

now just to open it on the computer lol

but that'll be easy enough :3

Carnival - April 19, 2010, 8:12 pm

Is there any other method to do this?

Pope Pwnage - April 19, 2010, 9:16 pm

Usually making a batch file that says command.com will work.

Administrators can't disable this primary feature of windows.

Just a file that says
Quote:command.com

Nothing more, nothing less. Then you have whatever you want.

MarV™ - April 19, 2010, 9:59 pm

how can you unlock websites with cmd please ?

Hustler - April 19, 2010, 10:22 pm

Keep in mind that anything you do in the schools computer system is tracked. They keep things tightly secured these days.

Dazz4C - April 20, 2010, 12:21 am

@MarkV-k

You can't, it's a server-side blocking. The only real way is using proxies..

godsp33d - April 20, 2010, 3:30 am

(Apr 19, 2010 10:22 PM)Hustlur Wrote: [\[CITE\]](#) Keep in mind that anything you do in the schools computer system is tracked. They keep things tightly secured these days.
changes to the local computer will not be tracked

Indeed - April 20, 2010, 3:56 am

Whats so great about shutting down the pc's at school anyway?

Marker - April 20, 2010, 3:44 pm

(Apr 20, 2010 03:56 AM)Chase Hawk™ Wrote: [\[CITE\]](#) Whats so great about shutting down the pc's at school anyway?
the look on people's faces when a pop up on their screen says "WARNING, VIRUS FOUND, NOW RESTARTING COMPUTER"

Fireren - April 20, 2010, 4:13 pm

Batch File:

@echo off
Command
@echo on

like olo said

Or you can try to make a batch that does that directly.

Marker - April 21, 2010, 5:05 pm

(Apr 20, 2010 04:13 PM)Fireren Wrote: [\[CITE\]](#) Batch File:

@echo off

I've done that, and it still comes up saying that its been disabled, please press a button to exit.

FaithOfHeaven - September 17, 2010, 1:45 am

Usefull thread :)

Message too short.

noid - September 17, 2010, 10:50 pm

This is like this at my school too. I'm afraid there is nothing you can do.

gutten3 - September 17, 2010, 11:11 pm

it had ben nice to get around proxys, my school is a fucking hole

No youtube No google No spotify

Milkyway - October 6, 2010, 1:40 pm

Spoiler ([Click to View](#))at home go to notepad and type in

'command.com'

save-as anythingyouwant.bat

now google

batch to exe converter

convert and carry on usb to your school

billy122 - March 1, 2011, 3:06 pm

You can make one easily. Get on notepad type in "command.com" save as a whatever with .bat then run that. pretty much what everyones saying

huntereight - March 1, 2011, 4:17 pm

new()fag (one word) wordfilters to smith btw

Check my tut on passwords, than get a teacher pw and right click cmd and say run as ?

jtjoe33 - March 1, 2011, 4:55 pm

AM I THE ONLY PERSON TO BE ABLE TO DO THIS!?!?!?!?

I know this wont always work but heres how i did it.

First you need to get ophcrack. Its a bootable disk and its amazing!

the next part is the part that some people cant do, the issue is that you need to find a computer that will boot that disk.

After that get the passwords for local accounts. in my school there is an account called "remote" and the password is "remote1" but its a local account so you cant save things to that account inless you plan on useing that computer only.

there you have it :D

have fun and enjoy Terminal :D :D :D :D :D :D :D

camrin - March 1, 2011, 5:05 pm

it fails

you son of a bitch it work at msk.unmc.uvm

Dmitryyank - March 1, 2011, 8:31 pm

What I do at my school is go into Microsoft word and then macros and run this code

```
Sub exe()  
Shell("anyprogram.exe")  
End sub
```

This seems to work for me

!!!! - March 2, 2011, 4:27 am

Ok.What OS is installed on the system?

And are u given administrative privileges?

Ricky Lee - September 28, 2018, 4:04 am

maybe type netstat -b it turns to administration modes, and then you can find the IP address and then type shutdown -i command

maybe it would be fine if you do that

I'm not sure but our school works like that

Lib - September 28, 2018, 6:15 am

Not Sure If it's been asked but do you have Access to Powershell?

Most Businesses/Schools Forget to disable access to this.

It can run The exact same commands as CMD Prompt and can do infinitely more.

Prawnster - September 28, 2018, 6:16 am
