Thread: [\[Downloader\] Using Proxy\(s\)](#)

The-One - April 16, 2010, 4:48 am

Here you go:

```
Code Imports System.Net
Public Class Form1
```

```
Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles Button1.Click
```

```
    If TextBox1.Text.Contains("http://www.#.com/") Then
```

```
        Dim IP As String = "xxx.xx.xxx.xx" ' Proxy IP
```

```
        Dim Port As Integer = "80" ' Proxy Port
```

```
        Dim wc As New WebClient ' WebClient
```

```
        Dim Proxy As New WebProxy(IP & ":" & Port, True) ' Set Proxy as WebProxy
```

```
        wc.Proxy = Proxy ' WebClient(.Proxy) = WebProxy
```

```
        wc.DownloadFile("www.#.com", "AvastBlantiBierus") ' Download the file
```

```
    Else
```

```
        MsgBox("Must be a valid # link")
```

```
    End If
```

```
    If TextBox2.Text = "" Then ' If 2nd text (Link) is empty
```

```
        ' Nothing, because there isnt need for a second download
```

```
    Else ' if it is
```

```
        If TextBox2.Text.Contains("http://www.#.com/" then
```

```
            Dim IP1 As String = "xxx.xx.xxx.xx" ' New Proxy IP
```

```
            Dim Port1 As String = "80" ' New Proxy Port
```

```
            Dim wc1 As New WebClient ' New WebClient
```

```
            Dim Proxy1 As New WebProxy(IP1 & ":" & Port1, True) ' Set Proxy as WebProxy
```

```
            wc1.Proxy = Proxy1 ' WebClient(.Proxy) = WebProxy
```

```
            wc1.DownloadFile("www.#.com", "NortonBlantiBierus") 'Download the file
```

```
        Else
```

```
            MsgBox("Must be a valid # link")
```

```
        End If
```

```
    End If
```

```
End Sub
```

```
End Class
```

You can easy make a function, to read out some proxys from .txt and use them, this whas just for testing.

Np. Glad i'd helped.

Panagiota - April 16, 2010, 5:05 am

Unique.

Thanks for sharing.

TehShrink - April 16, 2010, 5:17 am

Thanks for this, I was planning on doing something with proxys ages ago, might try again.

No problem, good luck with it :)

D.O.A - April 16, 2010, 5:42 am

Awesome Keep it up :D

:)) Hehe, I made a new POCMania banner. Will show it in Graphic section!

?BlueAce™ - April 30, 2010, 7:28 am

thnx.. that is useful.. ?

codepoet - April 30, 2010, 8:31 am

very nice man...thanks

Diebspiel - April 30, 2010, 9:20 am

Dim Port As String = "80" ' Proxy Port

The port is always an integer..

so:

Dim Port As Integer = 80 ' Proxy Port

iKorkSkalle - April 30, 2010, 10:13 am

Thank you, great post!
