Thread: [PC Management \[Mediafire\]](#)

HustlerEnergy - August 18, 2013, 3:00 pm

I've decided to release this (unfinished) source for PC Management.

The only reason being is because I have on-going projects at the moment and can't find the time to make a release of this.

Please use the source to learn from (as I did). Any credits should go to me purely for the source it's self but most of the functions I had coded without help. Other snippets were available on the web.

Truthfulness out of the way, I hope you enjoy this source. There are no .exe's within the .rar archive so you shouldn't have a problem with that.

Original thread can be viewed [HERE](#).

[DOWNLOAD THIS AWESOME SOURCE](#)

Password: HCh0s3N1One1F

I only ask for a small thanks if you download this :)

Enjoy.

hellomen - August 18, 2013, 3:05 pm

I don't want to be rude in any way but you did follow a tutorial on the CPU things didn't you?

because there is no simple way you can find out the real cpu usage on your first application without any yet knowledge too find this...

aswell as you did a good job and I hope you go on with coding we need good/kind person now-a-days in the visualbasic/.net section

Thanks for the reply dude, means alot.

SkyRider2 - August 19, 2013, 3:08 am

Checking the source out, thanks for this man. I saw the progress you had done in the original thread.

HustlerEnergy - August 19, 2013, 5:31 am

You are welcome dude, please enjoy it .

SIM-62706 - August 19, 2013, 6:07 am

man first

1.very nice GUI!

2.good job, and thanks for sharing this with us! :)

keep going!

ident - August 19, 2013, 9:22 am

You wrote a near identical class with identical comments that was listed in 2008

<http://jo0ls-dotnet-stuff.blogspot.co.uk/2008/12/howto-get-physical-drive-string.html> :/

HustlerEnergy - August 19, 2013, 9:37 am

I did get the class from somewhere and modified it a bit to suit the needs of PC Management but I've personally never seen this website. The class does resemble the same thing but it's not identical.

ident - August 19, 2013, 9:47 am

The imports are in identical order, Variables, comments are identical. How could this be coincidence. You have imported the management class also from <http://www.dreamincode.net/forums/topic/69314-how-to-gather-cpu-temp-from-dts/> but forgot to remove the old class. All you did was move this to form1

Wtf did you actually write?

All you did was move this to form1

Wtf did you actually write?people can make the same stuff as other people who already made it without actually looking at them...

We should trust on people words if they copied and didn't gave credits it's a lie they will life and getting a negative reputation by people as personal statement of someone...

even though good catch but also the same codes doesn't mean that it's leeched

I am sure there are thousands of programs on the internet having kind look a like codes I am sure

even you have them but it doesn't mean it leeches ;)

as far as this goes we all are leechers the only real coder(s) are from microsoft because they gave us the ability to use visual studio and its components :)

anyways once again good catch though.

and OP if you didn't write all things be aware too give credits if you don't know who made it give credits to the link and when you don't know that either (must be really stupid then) you should say credits to (unknown) person who made the name

ident - August 19, 2013, 11:53 am

Oh shut up. People might write similar code. This is not similar. It's identical with identical comments on identical lines.

hellomen - August 19, 2013, 12:18 pm

Please read the whole post I didn't mention this wasn't similar I've never checked it so I've to trust on people's words

don't feel offended when you are not even reading a whole post...

learn to do that and you earn more people's respect...

as for the OP please check back my post on the other page on what I've to say about leeching without crediting and I hope you can fill it up with the truth next time to be honestly I don't trust you anymore on your word and as well as a lot of people wouldn't while seeing you lied about the truth of the credits.

Ingenuity - August 19, 2013, 1:38 pm

(Aug 19, 2013 02:59 PM)Ch0s3N1One1 Wrote: [\[CITE\]](#) As some of the code was written with my own hands, those parts are to be credited to me. Any code that I did not write I do not take any credits for. Yes there may be a class or 2 that I didn't create by my self as stated in the OP, I learned from these snippets etc and people should too (if they choose to).

I can't write credits as I can't remember where exactly on planet internet I came across some codes, if you notice something about websites, they may lead you to other places and from those places to others.

Once again to clear shit up, I only take credit for putting this source together along with what I actually wrote but it seems in this case that I am C&P'ing everything (according to some people) which is wrong.

As a user stated on the previous page, a lot of people can write the same code, how can it be justified down to 1 person?

If you use the source then so be it, just don't go flaming my thread.

This source is not leeches, have you seen it anywhere else? End of argument.

Have a nice day.

You absolute code stealing no good humungous faggot. Give fucking credit where it's worth, don't

pretend to have written code that you've actually nicked, and don't get butthurt when people point out that you're a stealing no good shitpiece! It's people like you that make me want to stop releasing the source code for the projects I've written to the public - because I know someone like you will change about 3 lines and then call it your own.

Additionally, when you get caught out by members of the community, who know more than you about .NET, don't go all defensive, admit what you've done and don't try to hide from it. ident is a respected member of this community, I take his opinion to heart, whilst I hope you fall into a volcano after snapping your femur off.
