Thread: [\[DOWNLOAD\]vb.net 2player game](#)

lyncsta - April 16, 2010, 8:27 am

this is my game it was made in vb.net'

if you have played the game runescape its easy to understand if not you will get it

both players have health, attack defence and coins

health

If one of the players gos to 0 the game will end and the other player will win unless the player thats health is at 0 has brought on has on the item "Ring of life" this item when put on makes it so if the players health gos below 2 it will jump it up to 5 saving the player but it costs quite a coins. health is called hp in the game and it can be brought from the shop.

attack

Attack sets how high the player hits on the other player, you always have a 2 attack thats not show'en on your attack leave. so say you have 0 attack and the other player has 10 health and 0 defence and you attack you would hit a 2 but if he had 1 defence you would hit 1, at the end the more attack you have the higher you hit unless the defence is higher then the attack in that case if you attack you will hit a -hit witch gives him health. attack can be brought form the shop and you can also buy weapons witch turn out cheaper but you must put them on.

defence

Defence makes the other players hit lower, the more defence you have the lower the hit. armor can be brought from the shop witch you must put on you can also just buy defence buy its self.

coins

Coins are used to buy stuff from the shop. each turn you get 3 coins, you can also click the work button witch will skip you turn but give you 20 coins.

inventory

Your inventory is where you put on and take of your items like weapons and armor, but you can only have 3 items on at once.
