(Aug 22, 2013 10:30 AM)ThorKellHallKellSon Wrote: [\[CITE\]](#) how to spread it ?!

thanks in advance ..

There many ways of spreading.

Make a youtube video about some software and put the "download link in description"

Spread your server on torrent sites like piratebay.

Or you can spread your server on omegle claiming it to be a nude picture (change icon, spoof and bind it)

There are plenty of other ways, i suggest looking for some guides if you're new. Use the search bar.

Or you can take a look at my sig for a unique method :P

Looking to buy your Ebook but cant post in Market place or PM you as new on the forum???

El_Panos - August 29, 2013, 6:34 am

Hello,

I want to port forward and i have nVPN, so i port forward from nVPN Member Area.

Also i test the Listen from DarkComet .

But when i go to canyouseeme.com it tell me that there is not any open port.

(Port 1604).

What can i do to fix that?

Panayotis

Did you use your no-ip dns or 127.0.0.1 ?

You should completely turn off your firewall and all AVs.

Are you listening to the port on DC?

bluntzhackerz - August 29, 2013, 12:41 pm

(Aug 29, 2013 12:37 PM)Đa†Ha× Wrote: [\[CITE\]](#) Did you use your no-ip dns or 127.0.0.1 ?

I used my no-ip dns also still didn't and yes I'm listening to the port on DC.

PCPirate2009 - August 29, 2013, 12:45 pm

Hi, thank you for supporting newbies.

I have a question.

People that are selling installs often use the following terms:

- Installs
- Updates
- Loads

What is the difference between them?

Thank you!!

xVulnerable - August 29, 2013, 12:56 pm

(Aug 29, 2013 12:41 PM)bluntzhackerz Wrote: [\[CITE\]](#) I used my no-ip dns also still didn't and yes I'm listening

to the port on DC.

You said it didn't work outside your network.

How are you sure it was executed?

Did you test it yourself? Or did you try to infect someone?

If not did you watch the user yourself executing it?

And where the AVs turned off on the computer you tried infecting?

bluntzhackerz - August 29, 2013, 2:53 pm

I had my brother try on a computer that is just there no AV or anything, and he executed it for me

CoreyPSM - August 29, 2013, 6:11 pm

Seen as I can't contact you personally, I'll contact you here.

I have my stub created with all the right settings, I have gone over it several times.

I'm listening to the port correctly, I tried it both enabled with UPNP and disabled, I do not know what this does but none worked.

Anti-virus, disabled, default firewall was disabled and windows defender.

Latest version of no-ip DUC is installed, so, yeah...

Ports are forwarded correctly(changed with canyouseeme.org), 1604 didn't work, so I tried 1600 - didn't work either. I'm using my DNS server from no-ip and I have installed the DUC and I have my host running.

I couldn't even infect myself... I open my stub and nothing pops up in users, it will with a local IP of course, but not with the DNS.

I'm normally a fast learner, but this has me at a stand still because I don't know what I have done wrong.

xVulnerable - August 29, 2013, 6:23 pm

It works with your local address but not with the DNS.

This means the problem is either coming from your no-ip or from your portforwarding.

Also what RAT client are you using?

Did you add mutex to your server?

CoreyPSM - August 29, 2013, 6:27 pm

(Aug 29, 2013 06:23 PM)Đa†Ha× Wrote: [\[CITE\]](#) It works with your local address but not with the DNS.

I'm using DarkComet.

I generated it like five times, before and now - still no difference.

This is my port forwarding setup.

<http://prntscr.com/1o88sq>

This is my port that I'm listening to in DC

<http://prntscr.com/1o8906>

Proof it works? <http://prntscr.com/1o89uy>

I think I might be using an older version of DC, I don't know what you can interpret from this but the folder name of my DC is...

DarkCometRAT531 I can't determine what version that is, I bet you can.

xVulnerable - August 30, 2013, 2:25 am

You didn't answer one of my questions, are you using mutex on DC? Remove it.

Also try to forward your ip adress instead of your ipv4adress.

5.3.1 is the latest version for RATs.

Also make sure you are using the same dns on DUC no-ip as the same to the one you used on your server.

Cant think of anything else.. sorry

CoreyPSM - August 30, 2013, 3:51 am

There's no option to add an external IP, and when I remove the mutex the stub won't build.

xVulnerable - August 30, 2013, 4:05 am

(Aug 30, 2013 03:51 AM)CoreyPSM Wrote: [\[CITE\]](#) There's no option to add an external IP, and when I remove the mutex the stub won't build.

Mutex makes your server NOT run if it has been already run on the machine, this might be causing your problem.

Try change the mutex and try again.

CoreyPSM - August 30, 2013, 4:15 am

I have done that already, didn't work.

EDIT: I've come to the conclusion that everything I've done is correct, because I know I have done it all right. It's no-ip bugging, in the dark comet help file it stated that it's not as reliable as DyDNS, but I'm not going to risk purchasing a DyDNS server just yet. I'll see if someone else is more helpful with my situation, thanks for attempting to help me though.

xVulnerable - August 31, 2013, 7:29 am

Your stub is being detected and blocked by your Antivirus.
This is why you must disable all Antivirus protection and firewalls on your computer (Including windows defender).

After this has been done, if you still keep experiencing the same problem in sandboxie, open sandboxie, right click, delete contents. This will delete all the files you ever opened in it.

These two problems should be fixed now. Post again if something is still not right.

KidDomo - November 17, 2013, 12:39 am

(Nov 17, 2013 01:12 AM).Anon Wrote: [\[CITE\]](#) Please read the thread, upgraded members only.

When i do disable it, it seems to work aside from that, when i give my stub to another person it doesnt work at all. But for me it works. Any ideas?

xVulnerable - November 17, 2013, 2:56 am

(Nov 17, 2013 01:39 AM)KidDomo Wrote: [\[CITE\]](#) When i do disable it, it seems to work aside from that, when i give my stub to another person it doesnt work at all. But for me it works. Any ideas?

Make sure you are using your no-ip dns instead of your local host (127.0.0.1) when building your server. Make sure you have DUC no-ip updater open aswell.

You cant tell if your server is working or not by just testing on another person. There could be many things which would make it not work...such as AVs detecting it, especially if it is not crypted.

(Nov 17, 2013 02:45 AM)DrBlurrHD Wrote: [\[CITE\]](#) When I setup my darkcomet I get an error:
<https://gyazo.com/d0dbec43cb5d0f6306f0671b96e29fe1>

Add me on skype: OhhBlxrr

The problem there is that the port you are listening is already in use. You must be listening to the port on another program, or even Darkcomet itself. If you are sure you are not already listening to the port, restart your computer and that should fix your problem.

KidDomo - November 17, 2013, 10:22 am

Try running Darkcomet as Admin.

And by "sending to another computer" What do you mean exactly?

Are you sure the user ran the file? And does the computer have all AVs switched off?

wubulaien - November 17, 2013, 12:50 pm

Hi .Anon, nice thread. Thanks for that.

I have a question:

i exploited a computer by MSF and uploaded my stub to the enemy. I see the server is running in the processes. But i do not get connected to it.

It's the same server i spreaded a few times and everybody can be seen. Only this computer makes me headaches.

Prot forward is correct, no-ip is correct.

You somewhere said remove mutex. what do you mean? only clean the line Process Mutex?

thanks for your help

xVulnerable - November 17, 2013, 1:02 pm

Apart from the possibility of being blocked by some firewall or AV, it could be possible that the slave is not appearing due to your RAT being unstable. Viruses will never have a 100% execution rate.

This means, if say 100 people run my server on their computer, i will probably get 90 ish servers, and those other 10 are lost.

Mutex is used so only one server could be ran on the a computer at the same time.

So try creating another server, make sure it has a different mutex or simply do not add it, and re run the server on the computer and see if it works.

If that doesn't work, there's nothing you can really do, viruses simply cannot have a 100% execution rate.

KidDomo - November 17, 2013, 1:54 pm

It doesn't matter where you set the destination path.

The destination path is just where the file is installed one ran.

Normally viruses are set to be installed to Temp folder or Appdata as these folders are hidden.

This has nothing to do with loosing any slaves.

Make sure you add startup by clicking "start the stub with windows".

You can use the full editor instead of minimalist builder. The full editor just has more options. To update your bots with your latest server, use the download and execute feature on DC. Then you will have your victim on two servers. Uninstall the old one and keep the new one.

=B O T N E T = - November 18, 2013, 10:30 am

whats the best http rat atm?

curious.

(Nov 18, 2013 11:30 AM)i?sn? Wrote: [\[CITE\]](#) whats the best http rat atm?

curious.

I'm not familiar with any http rats sorry.

(Nov 18, 2013 11:45 AM)Oghma Wrote: [\[CITE\]](#) Hmm ok i did what u said, i even updated the server with the full editor one...But how do i remove the one and keep the other?is it bad to have 2 of them on their pc?

OP.Your help is amazing keep it up

Well first of all, i would hate it to have the 2 of the same bots showing on my RAT. Second of all if the user scans his pc, your old server will get detected and the user knows he has a virus. Its better to only keep one. To remove the server from the user, right click and uninstall the server.

renx215 - November 18, 2013, 1:05 pm

How often should I refud and re upload and execute my server?

xVulnerable - November 18, 2013, 1:08 pm

(Nov 18, 2013 02:05 PM)renx215 Wrote: [\[CITE\]](#) How often should I refud and re upload and execute my server?

Simple, whenever your server stops being FUD.

Rexxar - November 18, 2013, 1:11 pm

any suggestion to achieve this:- <https://hackforums.net/showthread.php?tid=3873222>

or in particular USB Spread + Offline Keylogger + FuD + Bypass Admin Privilege

Thank You

renx215 - November 18, 2013, 1:14 pm

Ok, using DC to I accomplish this by simply using upload and execute, or will that simply install a new server?

xVulnerable - November 18, 2013, 1:26 pm

(Nov 18, 2013 02:11 PM)Rexxar Wrote: [\[CITE\]](#) any suggestion to achieve this:- <https://hackforums.net/showthread.php?tid=3873222>

Upload and Execute will simply execute your new FUD server.

Then you should manually uninstall the old detected server from your slave and keep the new one.

LolBeer - November 18, 2013, 10:16 pm

(Nov 18, 2013 06:12 AM).Anon Wrote: [\[CITE\]](#) Who am i to know what is it that you need most?

Sorry for the confusion, I meant in general. stability wise.

I'm under the impression all rats basically have the same features as cyber with a few added extras.

I will be purchasing installs in the thousands, so something that easily allows me to update my crypted stub periodically.

Thanks!

ThaDealerz - November 19, 2013, 8:44 am

What is a rat eat posion? He will die??

dd

Lil Uzi Vert? - November 19, 2013, 10:31 am

Just got back into the RAT scene and when I used to setup my file to spread I used to use no-ip to get the link to put into the I.P. box. Since no-ip is no longer free would there be a problem using my actual IP address?

Note: I will be only 3-4 people who know pretty much nothing but the basics about computers.

xVulnerable - November 19, 2013, 10:41 am

No-ip is no longer free?

Yes it is. No-ip is still free.

<http://www.noip.com/>

shade917 - November 19, 2013, 10:59 am

How do I setup darkcomet on a virtual machine and have the stub execute on another virtual machine so that I can still log all the information without ever connecting to a router or the internet?

xVulnerable - November 19, 2013, 11:19 am

thx

I would recommend Tiny Manipulator Crypter it is \$20/Month or cheaper if you buy for a longer time. It's FUD and very nice support.

Treeple - November 20, 2013, 7:10 am

Thx Anon, will look into that one! I saw another post of you saying the Blackshades NET was the best you liked?

Another question, a VPN is required for best anonymity or a proxy? But even then, when you RAT the wrong person and they are going to backtrace you and contacting the VPN. You are screwed anyway.

Smalle - November 20, 2013, 7:13 am

Why when my victim types netstat -n on cmd does it show my IP and not my VPN's?

xVulnerable - November 20, 2013, 7:14 am

Yes i suggest Blackshades NET or njRAT.

Proxy will only hide your ip on the web, plus it can be easily bypasses.

Make sure you get a VPN with no logs so it's harder to get traced. I suggest nVPN.

(Nov 20, 2013 08:13 AM)Smalle Wrote: [\[CITE\]](#) Why when my victim types netstat -n on cmd does it show my IP and not my VPN's?

Not sure on that bro il look in to it.

Treeple - November 20, 2013, 7:36 am

Thx Anon! Is there also a crypter where you can combine the RAT to another file? For instance a torrent file.

I guess when an infected person opens the RAT but nothing happens, I think they already know they are infected with something.

Oh wait, tiny manipulator does that? With tab 3 'Assembly changer'. Right? Or is that another function?

Darkcomet does not require .net framework, unless your crypter does. Your server could have been detected by the user's AV, thus not being able to connect to Darkcomet.

(Nov 20, 2013 08:36 AM)Denneke Wrote: [\[CITE\]](#) Thx Anon! Is there also a crypter where you can combine the RAT to another file? For instance a torrent file.

No. Assembly changer simply changes the file's company, creation date etc....

You can bind a file in tab 2 here. This is called binding.

To update your slave, simply upload your new FUD server. Don't worry about the binded file.

If you're binding a file on a separate program other than your crypter, i suggest to first bind the file, then crypt it. I think you can still do it vice versa if your binder is FUD. Most crypters have an inbuilt binder anyway.

Yes Netseal if down atm :(

You should only put startup either on your RAT builder or on your crypter. Doing both could corrupt your server. There are no free RATs with reverse proxy, you should buy Netwire or Legacy Link.

Nexuz - November 20, 2013, 9:57 am

Hiho, im pretty new at using "Rats" i dont got a clue on how anything works.

Can we talk over skype? got some questions about it :)

Post here so i know that you are active!

rocki34 - November 20, 2013, 10:02 am

I have a couple of questions about RATing. I use jRAT by the way.

1. How do I reroute all my slaves through a VPN(Cryptic VPN)?
2. How do I use a slave who is on a network to infect other computers of the same network?
3. Is there an undetected reverse proxy software I can use (since jRAT does not have a built in reverse proxy), to mask myself as the slave's IP.

Any help would be appreciated.

Hey, as long as you added startup i'm sure you're loosing them in another way. They are simply

going offline or your server being detected.

When building your RAT server, make sure to add no settings which could be done in data protector such as startup. Doind so may corrupt your server. So try that, if the problem still persists, fill in this app and i will check what's going on via skype/tv.

Not that it will be downloaded silently, no.

(Nov 21, 2013 10:51 AM)Mikixxx Wrote: [\[CITE\]](#) I have one more question, is there any option to visit some website, download something and install it on my slave computer and I want to do it invisible for my slave of course. Update from URL.

Simply enter the link to your direct link of your server ex: www.example.com/server.exe

This will silently replace the old server with a new server. Make sure it is FUD.

If you are not looking to update, but simply download an extra file on the slave, you can use the Upload and execute feature.

You must have the file in your computer not on a website tough.

(Nov 21, 2013 10:59 AM)Dank Trees Wrote: [\[CITE\]](#) How would one go about RATING with the use of a VPN? Like how would you forward ports and stuff on a VPN?

You must use a VPN which supports portforwarding. Simply forward the ports through the VPN settings. There are no free VPNs which supports portforwarding. I recommend using nVPN.

LinkXenon - November 21, 2013, 10:10 am

No, that's true, not silently.

Anon, add me on Skype please, I want to talk to you.

Mikixxx - November 21, 2013, 10:26 am

Anon big thanks for you and for LinkXenon for your help guys :)

Just have one more question, I see you have a lot of experience with RATS, tell me is there any RAT (maybe Blackshades?) that can silently visit website, download file and execute it ?

I really need this function :) or some other idea how I can do this silently

xVulnerable - November 21, 2013, 10:36 am

Haven't i already answer your question? Scroll up.

Treeple - November 21, 2013, 1:33 pm

I made a stupid mistake. Was trying out nJrat which you posted in this sub forum. I setup a VPN, Port forward, NO-IP, made the server. Everything good so far. I copied the server to another computer here at home, runner it. Went back to my own pc waiting for it to show up. Nothing happened.

So I start investigating the problem and noticed I made a typo in the host while making the sever. Fixed the typo, build the server, deployed and it works like a charm! I really fell in love!! :D

However, there is one problem. I still have the server running with the typo host, so it doesn't show up and because of that I can not uninstall the server from my RAT. I also checked the box for a BSOD error when trying to close the process. Need some help fixing this. I can try to add another host in NO-IP with the type. However, I made the typo first in NO-IP and in my first server attempt i did not made the typo. Get it?

Example:

NO-IP host:

unknonw.no-ip.biz (So here i made the typo)

First server:

unknown.no-ip.biz (Not the original typo, but compared to the host a typo ;))

When using unknoww.no-ip.biz as host in the 'server' will fix problem. Because 'unknown' is that familiar, i think i can not correct it. (However i did not use 'unknown', the word i used is very popular. So possible already taken.).

Hope you understand it. thx

(Nov 21, 2013 02:33 PM)Denneke Wrote: [\[CITE\]](#) I made a stupid mistake. Was trying out nJrat which you posted in this sub forum. I setup a VPN, Port forward, NO-IP, made the server. Everything good so far. I copied the server to another computer here at home, runner it. Went back to my own pc waiting for it to show up. Nothing happened.

So I start investigating the problem and noticed I made a typo in the host while making the sever.

Fixed the typo, build the server, deployed and it works like a charm! I really fell in love!! :D

However, there is one problem. I still have the server running with the typo host, so it doesn't show up and because of that I can not uninstall the server from my RAT. I also checked the box for a BSOD error when trying to close the process. Need some help fixing this. I can try to add another host in NO-IP with the type. However, I made the typo first in NO-IP and in my first server attempt i did not made the typo. Get it?

Example:

NO-IP host:

unknonw.no-ip.biz (So here i made the typo)

First server:

unknown.no-ip.biz (Not the original typo, but compared to the host a typo ;))

When using unknoww.no-ip.biz as host in the 'server' will fix problem. Because 'unknown' is that familiar, i think i can not correct it. (However i did not use 'unknown', the word i used is very popular. So possible already taken.).

Hope you understand it. thx

Use system restore on your computer to remove your server from your computer.

Next time use sandboxie or a VM to test your server on your own computer.

Treeple - November 21, 2013, 1:47 pm

thx for the very fast reply. Right after i posted my reply i tried no-ip and changed the host. For god sake it worked. :D

Thx for your help! Really love it!

Will vouch for you! :)

If the user ran your server but is not showing up in your list, you probably did not set up your server right.

To change the file extension you need an extension spoofer.

As you know I am new to Ratting, so while working with them I have some questions. I hope I still can ask them when I have them.

When I use a RAT like nJRAT with TinyManipulator it should be FUD. When it is not FUD anymore, the coder updates the crypter so it will be FUD again. How do I update them on my slaves? Making another server, recrypt it and use the 'update' function in the RAT?

thx!

thx!

Exactly, although i suggest to first upload and execute your new server, then uninstall the old one. This should be done as when you use the Update feature, the server's execution rate is not 100%,

making you loose slaves.

Make sure you have your DUC no-ip updater running and you are listening to your ports on your RAT client.

Treeple - November 23, 2013, 6:14 am

Anon, do you also offer support on TinyManipulator? I have license as of today. I used njrat as well dc. I get them worked flawless as long as I don't crypt it. As soon as I crypt. Even when I uncheck all the boxes in tinymanipulator it still does not work. When the crypted server is started, nothing happened. Well, they don't show up as a slave but I see something happening in task manager and a loading icon.

EDIT: I do see some DOS screen flashing very fast. Don't have this without crypting it. Even when checked .net the server does not work when crypted.

Unfortunately you cannot portforward on a 3G.

Although you can just buy a VPN that supports portforwarding and that will fix your problem.

I suggest nvpn.

DarkComet Legacy is not what you need. Legacy is more like teamviewer and used for legitimate purposes.
What you need is Darkcomet 5.3.1F.

(Nov 24, 2013 05:55 PM)Mozzie. Wrote: [\[CITE\]](#) Just started with RATs yesterday, and I was wondering what a good way for beginners to spread is. Thanks :)
Try advertising on chat sites like chatroulette or omegle.
Or even better, sex chat sites will get u alot of pedos.

The problem may be causing due to a slow connection between you and the bot, in other words, lacking stability.

What RAT are you using?

If i were you, i would create a new server and recrypt it again and upload it again to your bot and see if works.

MateoBorja123 - November 28, 2013, 1:34 pm

(Dec 2, 2013 08:27 AM)xVulnerable Wrote: [\[CITE\]](#) You upload and execute it on your slave.

Once ran, it will lock his computer giving him instructions on how to unlock it back, which is doing the survey.

i see can i do something like this?

First i sent him a website (that website downloads automatic the file)
then

If i create a bot who installs through the download area the specific name of the file and open it up and install it.

And once i created that bot to sent it and execute it on his computer would it work?

xandru8 - December 2, 2013, 7:36 am

Good evening my good man... I have a question if possible ... I've been trying to set up DK again because i quit about 3 years ago and back then it was going amazingly well but now I set up the DK and the server and DUC and [censored] all properly according to numerous tutorials and when I try it on me nothing pops up and with 3 friends as well nothing pops up and the same thing goes with CyberGate I am trying my luck with both but even after looking through a few tutorials and doing the PortF correctly I still can't seem to find the hiccup and its frustrating me to the limit ... I was wondering if you could take a look at it and give me your pro advice on if its either something that I am doing wrong or its my router ... I appreciate the time.

Spritza - December 2, 2013, 8:00 am

Which RAT should I use that can hold around 2,000~ slaves and keep them that will be stable so I can use a survey locker on them?

xVulnerable - December 2, 2013, 8:04 am

(Dec 2, 2013 08:29 AM)chrille112 Wrote: [\[CITE\]](#) Hi!

I wonder a few things. Should i use a VPN when using or are spreading my server? And if i plan to buy slaves, what does "loads" and "installs" means? Can you recommend a good FUD crypter?

Yes you would be safer using a VPN, a paid one with no logs of course.

If you're using a VPN, make sure your no-ip dns is pointing to your VPN ip.

Installs are bots sold to multiple users, most tend to get botkilled so its not a good idea to buy.

Loads are bots sold to one person specific, you are to keep these bots for a long time unlike installs.

Tinymanipulator is a nice FUD crypter.

(Dec 2, 2013 08:30 AM)ManosxDxDxD Wrote: [\[CITE\]](#) i see can i do something like this?

And once i created that bot to sent it and execute it on his computer would it work?

PPD websites require the user to complete surveys, not just download and install a file. Its not that simple and takes a good 15-30 mins. So no you're idea is not good.

(Dec 2, 2013 08:36 AM)xandru8 Wrote: [\[CITE\]](#) Good evening my good man... I have a question if possible ... Hey, first of all using [censored] is useless as if any, your real ip address could still be given out to the police if they ask [censored] for your Logs. What you need is a paid vpn with no logs, i suggest nVPN.

Also, [censored] VPN does not support portforwarding, this is probably why you are having trouble with your RAT.

Turn off your VPN, make sure your ports are opened on www.canyouseeme.org and test your server using your localhost as your dns/ip when building your server. (This will only work when testing in your own network) After that works, build another server using your dns. If you are still having problems, i can help you on skype and fix your problems for a small \$10 fee.

I suggest in investing in a botnet if you keep to have a large ammount of bots, botnets are more stable than RATs.

However if you want to use a RAT i suggest njRAT, Blackshades or Cybergate. Check out

(Dec 2, 2013 09:11 AM)chrille112 Wrote: [\[CITE\]](#) Thank you! Okey, what do you mean by "make sure your no-ip dns is pointing to your VPN ip."? Thanks!

No-ip DNS is used so you would not loose your slaves if you change your ip. Therefore, your no-ip dns has to be pointed to your IP adress. Use DUC no-ip updater.

(Dec 2, 2013 09:29 AM)xandru8 Wrote: [\[CITE\]](#) lol no I am not maltese I am romanian and I don't have the possibility to pay you now because of my economical situation and I have tried it with out the cyber ghost and with DMZ opened and still nothing ... Not sure on VMs, but this is probably what's causing the problem.

HellWife - December 3, 2013, 9:38 am

(Dec 3, 2013 06:51 AM)xVulnerable Wrote: [\[CITE\]](#) Not sure on VMs, but this is probably what's causing the problem.

I'm struggling to find decent tutorials on port forwarding and VMS

Bong@Hitz - December 3, 2013, 9:54 am

ok....so darkcomet 5.3...firewall is off...port is seen...ipv4 is right...can infect self locally and show up but I dont seem to be getting any slaves when im sure i should have at least 1...kinda confused here...any help would be more than appreciated.

xVulnerable - December 3, 2013, 9:57 am

(Dec 3, 2013 10:54 AM)Bong@Hitz Wrote: [\[CITE\]](#) ok....so darkcomet 5.3...firewall is off...port is seen...ipv4 is right...can infect self locally and show up but I dont seem to be getting any slaves when im sure i should have at least 1...kinda confused here...any help would be more than appreciated.

Testing the server on yourself and working confirms its working (as long as you did not use your localhost as dns/ip)

Are you crypting the server? Is it FUD?

peela2050 - December 3, 2013, 10:01 am

We have a small lan network(domain connected)..I just want to access a computer which has not enabled any file, folder or printer sharing...Is RAT necessary for this operation or is there any other method....

Help in this regard is highly solicited...

Bong@Hitz - December 3, 2013, 10:02 am

yes...tested it crypted....2/33(avira,eset)...using foxyjava driveby(non silent)...must be the driveby crapping out?

xVulnerable - December 3, 2013, 10:08 am

(Dec 3, 2013 11:02 AM)Bong@Hitz Wrote: [\[CITE\]](#) yes...tested it crypted....2/33(avira,eset)...using foxyjava driveby(non silent)...must be the driveby crapping out?

Test the JDB on yourself too to make sure it works.

(Dec 3, 2013 11:01 AM)peela2050 Wrote: [\[CITE\]](#) We have a small lan network(domain connected)..I just want to access a computer which has not enabled any file, folder or printer sharing...Is RAT

necessary for this operation or is there any other method....

Help in this regard is highly solicited...

If you do not want the user who is using the computer knowing he is being monitored, yes RATs are necessary.

If not you can use Teamviewer.

Bong@Hitz - December 3, 2013, 10:12 am

yup tested driveby on self....click run..i show up on slave list...so confused

xVulnerable - December 3, 2013, 10:15 am

(Dec 3, 2013 11:12 AM)Bong@Hitz Wrote: [\[CITE\]](#) yup tested driveby on self....click run..i show up on slave list...so confused

Then you need a better spreading method!

How can you be so sure they actually ran your JDB?

Bong@Hitz - December 3, 2013, 10:20 am

fooxyjava has a hit execution counter...plus the way im doing it is logging into random Facebooks and posting a link to wall and friends stating," Can someone help me, Does anyone see me on this page, i'm not sure i have it working correctly <http://drivebyurl.com>"....the facebooks are generally age range 30-45...did that to 4 facebook last night so odds say i should have at least 1 slave.

Are you familiar with any RAT that can successfully bypass UAC. Were not talking about disabling UAC, but instead being able to modify, execute, and delete files that would otherwise call up UAC protection.

* To put this into perspective, let's say we want to post-exploit by setting up a VNC-Server, that requires installing a service. That would need administrative privileges, so either the RAT itself must run as SYSTEM user which is not easy to exploit on machines past 'Windows XP' or the RAT actually starts (and elevates) an executable that will install the service while bypassing the UAC. None of those 'Subprocess' rubbish will work in this scenario (as most rats use that to start applications).

So to summarise, are you aware of any RAT Payed/Free that is actually able to 'bypass' UAC

through some kind of exploit or of any method to run programs in elevated permissions without UAC getting in the way (whilst it not being disable entirely ofc)?

LegacyLink is not FUD.

You would have to crypt your server.

Note: Although changing the icon would improve detections in your favour, it does not make it FUD.

(Dec 4, 2013 09:16 AM)Fouadelyaouti Wrote: [\[CITE\]](#) they arrive like 15 min late or 1 hr

(Dec 4, 2013 09:19 AM)xVulnerable Wrote: [\[CITE\]](#) LegacyLink is not FUD.
You would have to crypt your server.

Note: Although changing the icon would improve detections in your favour, it does not make it FUD.

What RAT are you using?

Also are you crypting your server? Darkcomet yes i am i am also using Datascrambler

i also wrote this question in another help desk, but i would also like to read your point of view.

is it possible to avoid no-ip ?

i mean, are there also similar services like that? Or another way i can do to not do it with no-ip ?

xVulnerable - December 5, 2013, 7:56 am

(Dec 5, 2013 08:53 AM)Sprudel Wrote: [\[CITE\]](#) i also wrote this question in another help desk, but i would also like to read your point of view.

You can use your Ip address if you have a static one.

If you loose your ip, you loose your slaves.

Legit Hackz - December 5, 2013, 8:23 am

(Dec 5, 2013 02:50 PM)Dude amine Wrote: [\[CITE\]](#) when i try to open the server i builed , nothing happens , nothing appear on my list

Your RAT isn't set up correctly. There are many reasons why your server could not be working. You can start with making sure your ports are open and have DUC no-ip installed.

goonbag - December 6, 2013, 5:48 am

Hi, i configured my no-ip i forwarded my Port its a success and have firewall off and no AV's for some reason when i click on the rat it wont pop up on the list but shows on the processes list any recommendation ? Also do i leave it to TCP or TCP/UDP

xVulnerable - December 6, 2013, 7:29 am

Make sure you are listening to the port on your RAT and that you are running DUC no-ip.

tomatojoe - December 6, 2013, 12:29 pm

Hey, I just read up on your njRAT thread and got it setup last night. Was testing it on a spare computer and seems to work great, only problem being when the slave computer restarts. At startup a prompt appears asking the victim if they want to run the program. Clearly this is an issue for me. Is there a setting within the rat to fix this or something else i've done incorrectly? all help is very appreciated!

xVulnerable - December 6, 2013, 12:34 pm

Can you send me a picture so i can verify what prompt you are getting?

trfx - December 6, 2013, 12:42 pm

I am using DC, and no matter what I do to update my new FUD server on my slaves, Server Setting Information displays old server mutex and not the new one. So basically it is not updated. Remote edit server, Update from file, Upload and Execute , upload FUD server via file manager and run it as "hidden", none of it works, and old server mutex and stub id still appears unchanged. Any idea what am I doing wrong?

xVulnerable - December 6, 2013, 12:46 pm

(Dec 6, 2013 01:42 PM)trfx Wrote: [\[CITE\]](#) I am using DC, and no matter what I do to update my new FUD server on my slaves, Server Setting Information displays old server mutex and not the new one. You can change your server mutex by creating a new and change it through the main settings in the builder.

tomatojoe - December 6, 2013, 12:48 pm

(Dec 6, 2013 01:34 PM)xVulnerable Wrote: [\[CITE\]](#) Can you send me a picture so i can verify what prompt you are getting?

This is the prompt i get:

[\[img\]http://s21.postimg.org/gwyeujeo7/prompt.jpg\[/img\]](http://s21.postimg.org/gwyeujeo7/prompt.jpg)

xVulnerable - December 6, 2013, 12:52 pm

(Dec 6, 2013 01:48 PM)tomatojoe Wrote: [\[CITE\]](#) This is the prompt i get:

[\[img\]http://s21.postimg.org/gwyeujeo7/prompt.jpg\[/img\]](http://s21.postimg.org/gwyeujeo7/prompt.jpg)

That's normal. Don't worry about it as it won't make any difference.

If the file is run via JDB or RAT (upload & execute) that prompt wont appear.

trfx - December 6, 2013, 1:03 pm

(Dec 6, 2013 01:42 PM)trfx Wrote: [\[CITE\]](#) I am using DC, and no matter what I do to update my new FUD server on my slaves, Server Setting Information displays old server mutex and not the new one. I had intended to bind the server to a fake program and spread it that way, would that be alright? If not, a JDB should serve my purpose. Also I'm not exactly clear what you mean by "upload and execute", still quite nooby at all of this and would appreciate if you could elaborate a bit more?

Thank you for the help btw. Its invaluable.

Yes binding a program would be a good idea in some situations.
Upload and Execute is a feature in RATs which allows you to execute a program on your bot.

trfx - December 6, 2013, 1:20 pm

Not really sure what's happening here sorry, but il try to investigate it.

Mind sending me a picture of the error you get saying you have the same mutex?

(Dec 6, 2013 02:22 PM)SuperFrench Wrote: [\[CITE\]](#) months ago i was rating fine but now i bought a vpn back and plasma rat (have the features i want to use) i used to use darkcomet and i don't remember if when using a vpn that has the possibility to portforward , do i still need to portforward on my router? as right now it's not working and i think it's the only thing that can't make it work as the dns is working fine and right now i can't access my router as i dont know the user:pass as my brother changed it --"

If you want to use a VPN, make sure it supports portforwarding.

I recommend nVPN.

And no, you do not have to portforward on your router after forwarding the ports on your VPN.

Upload and Execute is a feature in RATs which allows you to execute a program on your bot.

Ok understand what you meant by upload and execute now, but still confused as to how it'll help.

Just to clarify, the program that the user is being prompted to run at startup is the RAT server. This occurs every time the slave machine is restarted. If the cancel button is clicked on the prompt then they don't appear as a slave in the njRAT list. Not sure where upload and execute would come into play if they aren't connected.

xVulnerable - December 6, 2013, 1:50 pm

(Dec 6, 2013 02:41 PM)tomatojoe Wrote: [\[CITE\]](#) Ok understand what you meant by upload and execute now, but still confused as to how it'll help. Crypting your server would probably fix the problem.

If you don't have one already, grab a free one from the Cryptography section.

The problem is that your new server is not being executed. It could be getting blocked by security software. Make sure you are not using mutex if you are crypting the server.

When you execute the new server you should have two bots using the same computer.

trfx - December 6, 2013, 3:43 pm

(Dec 6, 2013 03:22 PM)xVulnerable Wrote: [\[CITE\]](#) The problem is that your new server is not being executed. It could be getting blocked by security software. Make sure you are not using mutex if you are crypting the server.

You can grab a free crypter from the Cryptography section, don't expect it to be FUD tough.

It probably did not work on the other users' computer as it is not FUD and blocked.

goonbag - December 6, 2013, 4:59 pm

How do i listen to the port? cause there are lots of options in the rat lol thanks

Yes but i think the issue is im on windows xp sp3 ill try on my windows 7 and tell you if it owkrs

attenister - December 6, 2013, 7:20 pm

About port forwarding... In order for RATs to work, I need to configure port forwarding in the router, right? Currently, my computer is (and can only be) connected to my university's campus network. Thus, it's impossible to configure the router there to PF the RAT connections. To understand how complex this thing is, my local IP is 10.237.112.67. When I connect to 10.237.112.1, it displays an HTML login screen. I've tested most default values and it won't let me in!! :X

Ports can only be forwarded through your router settings unless on a VPN.

And don't use ports 80, it's already being used for HTTP service.

(Dec 6, 2013 08:20 PM)attenister Wrote: [\[CITE\]](#) About port forwarding... In order for RATs to work, I need to configure port forwarding in the router, right? You want to access your router settings? Open cmd and type ipconfig, search for default gateway and enter the numbers.

Yes you have to portforward for your RAT to work.

Since that's not an option for you, you can buy a VPN which supports portforwarding and forward the ports from there.

goonbag - December 7, 2013, 12:21 am

You know why?

You are probably using your local host instead of your no-ip dns. Check that.

752. - December 8, 2013, 10:06 am

(Dec 8, 2013 10:52 AM)xVulnerable Wrote: [\[CITE\]](#) You are probably using your local host instead of your no-ip dns. Check that.

What is no-ip dns?

How do I use it and where to get it from?

xVulnerable - December 8, 2013, 10:17 am

(Dec 8, 2013 11:06 AM)752. Wrote: [\[CITE\]](#) What is no-ip dns?

You should go read some RAT tutorials first..then if you don't get anything ask it here.

Gordonfreeman75 - December 8, 2013, 5:57 pm

- I created my DC server.
- I coded my crypter + undetected it.
- I tested spreading.

Result: When executing the DC server, a new exe is dropped (which is obviously not undetected) so AV's become angry with that new exe and everything goes to f*ck off.

Am I doing it wrong or should I just use another RAT?

Thanks :)

?ain - December 8, 2013, 6:28 pm

I'm not looking for RAT setup or anything, but I've got a question. I've been working with RATs for a while now, and I've gotten very experienced with them, though I've moved to using a botnet now. I have several methods to getting slaves, but I see that you have got to be one of the most experienced RAT-related members I've seen, so I'd like to know, what are your personal spreading methods? I doubt you use the basic methods, i.e. Apex or Chat spreading, but I'm genuinely curious.

Understalker - December 8, 2013, 9:38 pm

Seems like a wonderful RAT help desk.

Keep up the good work. ?

Dexter - December 9, 2013, 12:21 am

I haven't read this thread at all and I am pretty sure this has been answered a million times. But since I want to be updated, I have a question for you.

You do not have to answer this in the thread if you do not feel comfortable with it.

Which of the following RATs, in your opinion is the best, as in Stabe and Fast?

Following RATs:

Blackshades
Darkcomet
Imminent Monitor
jRAT
njRAT

Legacylink
Cybergate

This is just for personal use, not for mass spreading and not for keeping the bots forever.

I am asking which of them is the best, as in a pretty good, stable and fast file manager, screenshot manager.

- Dexter

byakuran - December 9, 2013, 3:23 am

i try to infect my laptop but i don't connect to my rat?

yeemun - December 9, 2013, 6:22 am

Darkcomet vs Njrat

In your opinion , which one is better ?

Njrat require .net dependency ?

Most of the people recommend darkcomet, but you said many function simply never work, why people choose darkcomet , not njrat ? and don't have many thread talking about njrat..

Maybe darkcomet can connect many slave and njrat cannot do that ? or just because darkcomet don't have dependency ...

theg00glexD - December 9, 2013, 6:27 am

whenever i infect my own laptop, few minutes after that i get a slave from america, named admin (all red). i use darkcomet.

xVulnerable - December 9, 2013, 7:47 am

- Dexter

Personally i use njRAT as my first priority RAT.

Then...

Blackshades and lastly Cybergate.

From the list you gave me, i don't have Legacy. As for the other RATs i don't think they are stable so i don't use them to hold my bots. This doesn't mean they are useless. You should really check my Ultimate RAT Review thread to get an idea on what i am talking about.

<https://hackforums.net/showthread.php?tid=3873504>

And since you seem really interested in this, leave some feedback on the thread :)

Instead of assuming someone actually did run your file, make sure it works first.

yeemun - December 9, 2013, 8:41 am

I double check and read your Ultimate RAT Review thread , it's said njrat is a best rat than other paid rats ... ?

Njrat requires .net dependency ?

I think people like darkcomet reason maybe is

- 1) rat features more than njrat ?
- 2) darkcomet no dependency ?
- 3) it's popular on HF , people don't like njrat ?
- 4) darkcomet can holding huge botnet and njrat cannot ?

I'm confused between darkcomet and njrat , and don't know dependency is important or not ?

xVulnerable - December 9, 2013, 8:52 am

People do not use njRAT simply because it's not a popular RAT unlike Darkcomet.

.NET framework 2.0 dependency is not important. .NET 2.0 comes with Windows XP SP2 upwards by default, not to mention windows xp users can download .net framework via windows update.

Dexter - December 9, 2013, 9:15 am

You don't mind the Blackshades rumors at all (The backdoored ones)?

I have owned Bshades for a while, but recently I want to go over to something more reliable. The

reason I am making the change.

When was the last time njRAT was updated? And I am not a fan of free stuff, even if they seem better. I always think that if it's paid, the coders have a better goal and ideal workspace.

BottleOWater - December 9, 2013, 9:29 am

Is the njrat stability and execution rate better then darkcomet?
Like why do you find njRat better then darkcomet :O

xVulnerable - December 9, 2013, 9:29 am

I believe that backdooring problem was fixed, as in they do not backdoor their products any more. Being paid or not doesn't make it better.
Blackshades has not been updated for like a year....

(Dec 9, 2013 10:29 AM)SuperFrench Wrote: [\[CITE\]](#) Is the njrat stability and execution rate better then darkcomet?

Like why do you find njRat better then darkcomet :O
Never had any problems with njRAT execution rate.
I get questions like this all the time, that is why i made this:
<https://hackforums.net/showthread.php?tid=3873504>
Online and answering any questions!

Nope, you got me wrong... My crypter is working perfectly, as well as the crypted server, but when victim opens cryptedServer.exe, a new exe is dropped somewhere (msdsc.exe or sth like that) which I figured that is the actual server, but that new exe (msdsc.exe) is obviously not crypted, since it is "generated" by the previous cryptedServer.exe, so I guess I can't access msdsc.exe to crypt it.

Well this sounds weird as sh*t, I can't understand how would I spread a DC server if it's gonna be detected even when crypting it lols..

I hope I explained myself better this time ?

Regards.

Yea, that means your crypter isn't "crypting" it correctly if its dropping a detected file...
Can't really help you here sorry.

(Dec 11, 2013 12:37 AM)younghacker321 Wrote: [\[CITE\]](#) Hello i need help with my dark comet rat. I have made so much servers my ports are forwarded but its not crypt my virus so i get them to disable there anti virus which they do and they would download my virus from dropbox or mediafire and they would open it and the fake error message comes up but they don't come up in my users list Even tough they have their AV turned off, and the fake error message popped up, their firewall may still be blocking the connection between him and you.

I'm guessing you're using Darkcomet which is the most popular RAT.

D3vn3t - December 11, 2013, 8:18 am

Do u know how to use the reverse relay on blackshades??

(for example, andromeda0

Having no dependencies doesn't mean it is compatible with every RAT.

Having no dependencies most of the time refers to the .NET Framework 2.0 dependency.

This means a machine does not have to have .net framework 2.0 installed in order to run, or any other dependency.

GU€€I - December 12, 2013, 9:20 am

I've set everything up and did everything tutorials tell me to. My port is open (tried canyouseeme.org) so my firewall aint blocking the port. Also, im using nVpn, but it should'nt be the problem because it has worked before also. So the problem is that when i create the file and run it, nothing literally happens T_T ! Does'nt show a window or anything.

It works when I use the ip 127.0.0.1 but I don't know what's the problem because I have set up my No-Ip correctly, i have tried to make new host n' shit.

Could some you helpz me?

www.sharesend.com is safe.

So is www.rghost.net

Use www.nodistribute.com for scanning.

Pieced - December 12, 2013, 8:35 pm

Hey

I'm having the same issues setting up any RAT as a previous poster. Before i could use my test server in a VM and have no issues connecting to it. Now(month or two later) i can no longer get a connection.

Here is what i have tried:

Firewalls Off(Unless something is hiddden somewhere)

Windows Defender Off

Virus Scanner Off

Using nVPN And Ports Forward

Using No-IP and DUC

Tried Anubis but could not register due to not recieving activation email

At a loss, would appreciate some help.

xVulnerable - December 13, 2013, 8:28 am

You can't be so sure unless you see them opening it.

If it's working on yourself, and you are using no-ip dns and not your local host, it is most probably not crypted and getting detected.

Am i right?

(Dec 14, 2013 03:56 AM)KuKluxKlen Wrote: [\[CITE\]](#) So i'm using Darkcomet and Icryptex when I upload my stub and download it, run it, it asks if I/Victim would like to run "stub name", If they hit yes it then comes up with "Are you sure you want to run msdcsc.exe" in the startup file, which looks very suspicious, is there a way to stop this from happening?

That's something which is the crypter's fault.

Contact the owner and tell him about the problem so he can fix it.

xVulnerable - December 14, 2013, 4:29 am

I'm thinking the problem is not the OS, but more than your friend's computer.
It is probably getting blocked, especially if it's not crypted.
I suggest you download a VM, that way you can test your server on Windows 8.

You cannot tell if your server is working or not just because it is not working on a particular machine.

Wheezy Gang - December 14, 2013, 5:57 pm

For some reason I cannot rename my folder I have Dark Comet in, I get this error

<https://gyazo.com/2fddf84a8ffe374af0465f0471a623f2>

Also I have my stub on my desktop, when I go to delete it I get this error

<https://gyazo.com/8c56dd8c6255be2a28e9487a63dea83f>

For both errors when I hit try again I get the same error. Any ideas?

xVulnerable - December 14, 2013, 6:00 pm

(Dec 14, 2013 06:57 PM)Skwillex Wrote: [\[CITE\]](#) For some reason I cannot rename my folder I have Dark Comet in, I get this error

<https://gyazo.com/2fddf84a8ffe374af0465f0471a623f2>

Also I have my stub on my desktop, when I go to delete it I get this error

<https://gyazo.com/8c56dd8c6255be2a28e9487a63dea83f>

For both errors when I hit try again I get the same error. Any ideas?

Haha you got infected by your own stub :)

Remove it, you need to remove it from your startup and restart your machine.

Wheezy Gang - December 14, 2013, 6:00 pm

(Dec 14, 2013 07:00 PM)xVulnerable Wrote: [\[CITE\]](#) Haha you got infected by your own stub :)

Remove it, you need to remove it from your startup and restart your machine.

Oh well, silly me.

Another noob question... how do I remove it from startup?

Thread glitched, can't see my post for some reason yet I know I clearly posted.

xVulnerable - December 14, 2013, 6:15 pm

Testing something, thread might be glitched.

Click on start, type regedit.exe

Go to this locations:

HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\Run

HKEY_LOCAL_MACHINE\Software\Microsoft\Windows\CurrentVersion\RunOnce

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\Run

HKEY_CURRENT_USER\Software\Microsoft\Windows\CurrentVersion\RunOnce

Find your stub startup key and remove it.

Wheezy Gang - December 14, 2013, 6:20 pm

xVulnerable - December 14, 2013, 6:33 pm

On default it would be MicroUpdate, it seems that you do not have startup in your server.

Simply restart your computer and check if you are able to rename your folder to see if you're still infected.

Wheezy Gang - December 14, 2013, 6:44 pm

Your local host will only work in your own network. Use your dns.

Make sure you have DUC no ip updater running.

Turn off all AVs and firewalls, this may be your problem.

Make sure you turn off windows defender, microsoft essentials and other AVs installed. Uninstall them if necessary. Don't forget the firewall. After this is done, test on your self and test on anubis.

(Dec 15, 2013 01:44 AM)Berries Wrote: [\[CITE\]](#) how does one get the target through a link What?

You can infect computers using several methods, such as JDB or fake program. You can get passwords from the keylogger.

Reverse proxy, legacy link or Netwire.

LOLMakeMoney - December 18, 2013, 8:56 am

Which would you lean more towards? I looked at netwire due to the amount of systems it can be used on.

Legacylink looks promising as well, ideally I would like to keep the file size down. On average I get about 5,000 targetted clicks from sites. I'm sure I could easily convert 200-300 per day into installs.

Looking to target around 5k-10k USA for private proxy usage. I think this is easily obtainable but curious as to what the best rat would be for the money. The proxy server also MUST be able to

transcribe http ssl and also be able to upload files.

#1 some time when i do multiply work like, downloading data + remote desktop + something else, it disconnects , problem is my rat connected but i have no access & the same sometime i do nothing and its disconnects

#2 i don't see option in cybergate / in my crypter too, for set in start up, can you help me please?

next need 1@ Brother if you don't mind, can you share nJrat trusted download link please?

2@ i download mozilla profile, then i get all saved password in my pc, is there any way same in google chrome? saved password file? that i could download in my pc? / thank you

Dear Brother, i am really happy to get your reply, here the answers that you asked /

1/ Please explain in more detail, do they connect to your RAT or not? Then what happens?

2/ When building/crypting your server, add "startup"

Pieced - December 21, 2013, 7:11 pm

My DC started randomly working.. somehow. Anyway, i had another question for you if you don't mind. I want to use njRAT, however when i launch the server on either 0.6.4 or 0.7d i get an error saying i don't have the correct .net runtime and the RAT server wont launch. I do have the latest .net installed on my test machine.

Any ideas?

Make sure you have all AVs turned and firewalls turned off, uninstalled if necessary.

If problem still persists it's most likely coming from your router.

You can fix this problem by buying a paid VPN.

(Dec 23, 2013 08:46 AM) Buzzle Wrote: [\[CITE\]](#) Just setup jRAT can I pm you for a few test installs? I don't have a vm installed and testing on yourself in sandboxie while using a vpn to connect to your no-ip for port forwarding doesn't work.

Sure, pm me your skype so i can give you a test install.

Millionaire - December 23, 2013, 8:40 am

Please post on the thread saying thanks if you download.

LOLMakeMoney - December 23, 2013, 8:09 pm

What are the advantages of using a botnet over a rat? Or vice versa

My question was deleted.

What would you prefer to use? Botnet or a RAT?

What is the advantages to both?

Do you prefer an HTTP Panel (Can hold LOTS of slaves) compared to a smaller NET with a CONNECTION based Panel.

What do you think of BNETS compared to RATS?

Are WEB/HTTP Panels better than Program based Panels?

Would something like SOLAR have an advantage over NETWIRE? Vice Versa

When i try to post it doesnt work What the hell.

35 chrs

Botnets are ment to be more stable than RATs but they lack features. Botnets are used for BTC minning, DDOS etc....

I dont use Botnets so i cannot give you any recommendations.

newnamewoot - December 23, 2013, 8:49 pm

Hey, I was just wondering you can bind a darkcomet RAT to a .jar File in such that the .jar file will still work when opened. Thanks alot.

xVulnerable - December 23, 2013, 8:52 pm

(Dec 24, 2013 07:30 AM)Vampiresa a Wrote: [\[CITE\]](#) What would cause me to loose all my slaves everytime i restarted Dark comment?Sometimes when slaves go offline they keep appearing on your RAT until you restart DC.

EpicPro? - December 24, 2013, 7:13 am

Gave me a test install took just a few mins.

Vouched!

DarkAbyss - December 24, 2013, 7:20 am

I have a quick question, and that is: Say I have slaves under one No-ip . what Happens when that No-ip expires

xVulnerable - December 24, 2013, 7:23 am

(Dec 24, 2013 08:20 AM)DarkAbyss Wrote: [\[CITE\]](#) I have a quick question, and that is: Say I have slaves under one No-ip . what Happens when that No-ip expires
What do you mean by expires? Do you mean banned?

DarkAbyss - December 24, 2013, 10:14 am

(Dec 24, 2013 08:23 AM)xVulnerable Wrote: [\[CITE\]](#) What do you mean by expires? Do you mean banned?

No after 31 days they expire, I got an email that said so

xVulnerable - December 24, 2013, 10:20 am

(Dec 24, 2013 11:14 AM)DarkAbyss Wrote: [\[CITE\]](#) No after 31 days they expire, I got an email that said so

Not sure what you're talking about. Can you still login to your account?

Download DUC no-ip and login to your account.

DarkAbyss - December 24, 2013, 11:17 am

(Dec 24, 2013 11:20 AM)xVulnerable Wrote: [\[CITE\]](#) Not sure what you're talking about. Can you still login to your account?

Download DUC no-ip and login to your account.

Yes, also, Now my DC won't even connect on a local host very confuzed

xVulnerable - December 24, 2013, 11:40 am

(Dec 24, 2013 12:17 PM)DarkAbyss Wrote: [\[CITE\]](#) Yes, also, Now my DC won't even connect on a local host very confuzed

Login to your DUC no-ip and show me a picture of what you see.

Not really sure what you're saying.

wubulaien - December 24, 2013, 11:47 am

you have to use at least once a month the login to no-ip or update your ip via duc. otherwise your account expires on no-ip

xVulnerable - December 24, 2013, 12:01 pm

(Dec 24, 2013 12:47 PM)wubulaien Wrote: [\[CITE\]](#) you have to use at least once a month the login to no-ip or update your ip via duc. otherwise your account expires on no-ip

Thanks for the information. I didn't know this.

I am considering starting on a RAT, but just have 2 questions, do all rats show the webcam light on, on the victims laptop, and if I browse their PC do they see the mouse moving and folders opening? I am hoping neither of these happen, otherwise it isn't a very inconspicuous method.
:)

deadzead1 - December 24, 2013, 3:13 pm

my first post,and i'm probably going to get my nuts crushed for what I am asking...I'm fairly new to crypting So here is my question,can someone,or xVul. test my rat for me?? i think it's completely fud but i need reasurance...so if someone is willing to help me,pm me.thanks!

xVulnerable - December 24, 2013, 4:59 pm

:)

Not all webcam lights turn on. Some do and some don't.

If you use remote desktop they will see you moving their mouse and controlling their desktop. If you use the file manager feature they wouldn't notice anything.

GeorgeSmith - December 24, 2013, 5:31 pm

Happy Christmas! I was wondering whether you have any suggestions for which RAT and which Crypter/Binder to use? My only requirements would be that they are fully FUD and work with Windows machines. If they work with any other OS's, that's a bonus. I would be looking to get several hundred slaves at some point when I get the hang of spreading.

xVulnerable - December 24, 2013, 6:19 pm

Ask what you need help in here and i'll be glad to help.

RoyalGuard17 - December 24, 2013, 9:27 pm

I need help badly. I've googled a ton, looked and looked for solutions:

My server will not connect to my client through no-ip or my regular IP, only on LAN.
I've only tested on my own computer. It successfully connects on my lan, but not WLAN.
I've port forwarded and checked on canyouseeme.org, it shows port is open.
Firewalls are completely off and no AV. (I added exceptions regardless).
I've set my IP to static on LAN. Added a reservation on my router. I've turned off my router firewall.

Why won't it connect? Do I have to test on a computer that is not on the same network as me or can I test it on my own PC?

Thanks.

AL3RION - December 25, 2013, 12:55 am

Request: Test Install?

Skype: webakins

Have TV: No but I can get it if needed. <-- pc is slow tho.

Upload your stub on <http://anubis.iseclab.org/> and you should get a connection if it's working.

Make sure it's unencrypted, never upload crypted stubs here.

I don't give free assistance on skype. Feel free to ask any questions here.

tylers071 - December 29, 2013, 3:35 pm

Well I have my ports forwarded and when I test the servers on myself they seem to work. Obviously the servers close after that so I make a new one with the same settings and I can't connect to my slaves. Do I need a static IP or what? I can't seem to figure out why I cant connect to my slaves but I cant connect to myself. I am using No-IP DUC and I have a host on no-ip. Everything seems right but like I said I get no connection.

xVulnerable - December 29, 2013, 3:38 pm

Test your unencrypted server first not a crypted one.

Turn off all firewalls and AVs on the computer you're going to test it on.

If it doesn't work, upload on www.anubis.iseclab.org

tylers071 - December 29, 2013, 4:49 pm

I have done that. I have tested them both ways. Each time it's the same. It's something I am doing with the settings or ports. I am not using a static IP I use my IPv4 address to port forward.

(Dec 29, 2013 05:10 PM)xVulnerable Wrote: [\[CITE\]](#) Test your unencrypted server first not a crypted one.

Port forwarding (Open the port): Doubts

BloodGames - January 1, 2014, 3:06 pm

What RAT should i get to start off with? and Is it any similar to running anything on c++?

perdevoter - January 1, 2014, 8:03 pm

I just tried setting up a DarkComet Rat with Plutoniums tutorial on this forum. I've done it a couple of times before and it worked great. This time I'm using Windows 8 and try to infect another computer with Win8 and no connection appears. Am I doing somethibg wrong or is Dc not working with W8? In that case, do you have any tip for another Rat client to use?

My ports are forwarded and I'm using No-ip DUC.

xVulnerable - January 2, 2014, 2:07 am

Something is not setup correctly.
Make sure you have all Antiviruses/Firewalls disabled on BOTH computers. And upload your UNCRYPTED stub on www.anubis.iseclab.org and you should get a connection.
Make sure you are listening to the ports on Darkcomet.

(Jan 1, 2014 04:06 PM)BloodGames Wrote: [\[CITE\]](#) What RAT should i get to start off with? and Is it any similar to running anything on c++?
Start with a free RAT, check out Darkcomet and njRAT.

Hassan Ashas - January 2, 2014, 2:36 am

Sorry to ask you but can you tell me that what is RAT, how it works? what can it do? which one is the best RAT? how can we use it?

Can you give me a link or tell me please? I would be very thankful to you :)

Viagra - January 2, 2014, 2:41 am

Could you please help me with my Darkcomet? Apparently I don't pop up on my User list while I have 14 bots online.

perdevoter - January 2, 2014, 6:49 am

I made it work, thank you very much for your help. Do you recommend any FUD crypter or someone legit who can make it FUD? Or are perhaps you capable of making the server FUD? ?

xVulnerable - January 2, 2014, 6:52 am

(Jan 2, 2014 03:41 AM)FithenrajB Wrote: [\[CITE\]](#) Could you please help me with my Darkcomet? Apparently I don't pop up on my User list while I have 14 bots online.

Sometimes it doesn't work when you test on your own network. Usually because it's being blocked by a firewall/AV.

Just make sure it works in other networks and you're good.

(Jan 2, 2014 03:36 AM)Hassan Ashas Wrote: [\[CITE\]](#) Sorry to ask you but can you tell me that what is RAT, how it works? what can it do? which one is the best RAT? how can we use it?

Ports Forwarded?: [Yes]

I have the server crypted but it still won't show up as slave i really need help, thanks in advance will be really appreciated if you help me out on skype.

smartboy001 - January 4, 2014, 3:15 pm

Skype: [smart.boy3997]
Have TV?: [Yes]
RAT Client: [DC]
No-ip Setup?:[Yes]
Ports Forwarded?: [no cause i use public network (wireles) and i have not a router to porting..so please help me with another way if u can ?

vulgarX - January 4, 2014, 8:06 pm

Now, my question is.. since the RAT is public doesn't that make it obsolete?

KUSHFIEND - January 4, 2014, 8:23 pm

Hi- I port forwarded and have been able to run my server on both local and remote pc's for about a week. Today when I turned on my pc canyouseeme.org is telling me that my port isn't open any more. I tried closing & opening socket, restarting DarkComet, restarting pc, and it's still telling me its closed. What could the problem be? Thanks in advance! I am very eager to get it working again.

xVulnerable - January 4, 2014, 8:26 pm

(Jan 4, 2014 09:06 PM)vulgarX Wrote: [\[CITE\]](#) Now, my question is.. since the RAT is public doesn't that make it obsolete?

No how does it become obsolete?

(Jan 4, 2014 09:23 PM)KUSHFIEND Wrote: [\[CITE\]](#) Hi- I port forwarded and have been able to run my server on both local and remote pc's for about a week. Your router probably isnt portforwarded anymore, this might have happened if your LAN ip changed.

Try portforwarding your router again.

Niptonite - January 4, 2014, 10:38 pm

I have a few questions about how to update slaves in Darkcomet.

1. Should i use the "Update from file" feature to update my slaves?
2. How many slaves should i update at once via the "update file feature"?
3. How should i backup my slaves?

xVulnerable - January 4, 2014, 10:49 pm

(Jan 4, 2014 11:38 PM)Niptonite Wrote: [\[CITE\]](#) I have a few questions about how to update slaves in Darkcomet.

2. How many slaves should i update at once via the "update file feature"?
3. How should i backup my slaves?
 1. Update from File/URL.
 2. Doesn't matter.
 3. Upload your slaves to another RAT.

'OverSight - January 5, 2014, 3:48 am

I have a mac laptop with a vm with windows 7. I'm trying to use Dark Comet but when I port-forward through my vpn and check canyouseeme, it says that it can and my port is open. But the thing is, I'm using the Mac No-ip client and a Mac vpn client that lets me port-forward. So far, no luck (I have tried testing the stub in another vm as well as having the No-ip client in the vm). I had also cyrpted the stub and the av did not detect it. The internet connect is shared on the vm. I'm not sure if need to use a different setting. (I have a windows desktop and it has the same problem)

If I could get this problem fixed I would be extremely happy. Thank you in advance.

xVulnerable - January 5, 2014, 4:00 am

As long as your your port shows as open, the problem is coming from your RAT.

Have you disabled any AVs or firewalls in your VM? Don't forget about Windows defender.

Batman™ - January 5, 2014, 4:55 am

I've been trying to get a rat working for a long time. I'm port forwarded using dark comet and have my stuff crypted. Nothing ever shows up on my end though. And I'm 100% sure I'm doing everything right. Can you please assist me via teamviewer?

Ramditto - January 5, 2014, 4:59 am

In the no-ip should we set the prefrence to detect ip of local network or "detect my ip" ?

xVulnerable - January 5, 2014, 5:21 am

(Jan 5, 2014 05:55 AM)iTzSketchy Wrote: [\[CITE\]](#) I've been trying to get a rat working for a long time. I'm port forwarded using dark comet and have my stuff crypted. Nothing ever shows up on my end though. And I'm 100% sure I'm doing everything right. Can you please assist me via teamviewer?

First make sure your RAT & server are actually working. Upload it on <http://anubis.iseclab.org/> you should get a bot for a few seconds.

(Jan 5, 2014 05:59 AM)Ramditto Wrote: [\[CITE\]](#) In the no-ip should we set the prefrence to detect ip of local network or "detect my ip" ?

Umm not sure what you're trying to say sorry.
In the no-ip?

I'm busy, how ever i will add you to give you a test install.

EXPLICIT CONTENT - January 5, 2014, 7:08 am

What's my problem?

I can infect myself but not others.

I can't forward my own ports, don't ask.

I could RAT a few months ago with a VPN with Ports forwarded so I bought Cryptic VPN.

I still can't infect anyone else but myself, even after forwarding the ports.

Do I need to change something in the firewall?

xVulnerable - January 5, 2014, 7:10 am

(Jan 5, 2014 08:08 AM)Codah Wrote: [\[CITE\]](#) What's my problem?

I got all covered :P Just need a test install.

Tomorrowland - January 6, 2014, 12:03 pm

I have used J-Rat, for quite a while now, and I have never had a problem until today! I tried building a new server since I got rid of my old one, and I keep getting this error when I hit " Build "

```
" java.io.FileNotFoundException: C:\Users\Sean\Documents\dfd.jar (Access is denied)
at java.io.FileInputStream.open(Native Method)
at java.io.FileInputStream.<init>(Unknown Source)
at jrat.dz.b(dz.java)
at jrat.ef.b(ef.java)
at jrat.nS.run(nS.java)
"
```

I've tried running as admin.. It didn't seem to fix the problem, I think the issue is something to do with my temp folder but I'm not to sure..

JimboBimbo - January 6, 2014, 12:55 pm

Ciraze - January 7, 2014, 1:46 am

I need help with Ratting. Everytime I make a stub send it to someone, even if I activate it on my own computer when I restart my computer it disappears, (note the Rat works perfectly just as long as I don't restart my computer) . This usually happens on Darkcomet but also happens with Cybergate, with Cybergate it usually stays active for a couple of days and then disappears. I tried so many options, I just can't seem to get it to stay on the users computer. Please help me. I also use RazorCrypt so It shouldn't get detected or anything.

madafakenzi - January 7, 2014, 1:24 pm

Hey!

I want to get the mentor offer from you, can you PM me you're skype?

meeko23 - January 7, 2014, 1:43 pm

I just made a stub, I think I made it ok, it is just an exe and not been fud, hoping you can put it onto a test install so I can see if it works before I throw it out into the wide world

Firex1 - January 7, 2014, 2:00 pm

Hey, can you PM me when you get a chance. I am having trouble with opening my ports for Plasma RAT. Thanks in advance.\

EDIT: Fixed the problem. Now I just want to test my server. Is it safe to run sandboxed or will that infect me still.

xVulnerable - January 7, 2014, 2:36 pm

When building your server do not use any features, most importantly statrup.

When crypting your server make sure you add startup.

bluesky56 - January 7, 2014, 2:42 pm

Hello

I have a problem with jSpy RAT. I explain you, before I used the last version (0.0.5) and it works perfectly in other PC remotely but now with the new version (0.0.6) it does not work anymore. I set up no-ip account, My ISP does not block the ports and my firewall and antivirus does not block anything.

I choose this RAT because it still undetectable from AV and it works on all Os's such as Windows, MAC and Linux.

Please, help me if you can to find a reason. I do not know what I must to do. I assure you that everything is ok but I don't understand why it does not connect :-(

It works perfectly in my local PC and not remotely. I can't upload it on Anubis because they could distribute the sample and I do not want that it could be detected.

Thanks!

Do you have DUC no-ip updater running?

Are your ports open on www.canyouseeme.org and did you disable any AV/firewall?

xxGoldenNuggetsxx - January 8, 2014, 2:18 pm

Skype: xxmichael555xx

Upgraded? No

Evil_Injection - January 8, 2014, 4:24 pm

Have a problem in Cybergate.

When i build a server and execute it on my second laptop on a different network i didnt connect :(With DC its working.

Portforwarded right, turned off firewall, uac, smartscreen shit, defender etc.

I dont know what i do wrong becassue in DC its works ;//

Thanks in advance :)

xVulnerable - January 8, 2014, 4:37 pm

Assuming you really tested it on a different network,
Have you disabled AVs/firewall on BOTH computers?

And you should be using different than DC, are you listening to the ports on Cybergate. Also check if they are open on www.canyouseeme.org

Jose"the real 1" - January 8, 2014, 4:38 pm

is it so dificult to install a free rat on vmware?

xVulnerable - January 8, 2014, 4:47 pm

(Jan 8, 2014 05:38 PM)Mrlips Wrote: [\[CITE\]](#) is it so dificult to install a free rat on vmware?
Nope, why would you think it would be difficult?

Jose"the real 1" - January 8, 2014, 4:50 pm

Yes disabled both av, firewalls etc.
Yep ports open.
Yep listening on the port in CG
Yep "succes"
This is so strange man x.x

xVulnerable - January 8, 2014, 4:55 pm

(Jan 8, 2014 05:50 PM)Mrlips Wrote: [\[CITE\]](#) just got told so,is there a good tut for DC on VMWare?
Setting up a RAT on a VM is the same as setting it up on a normal PC.
Use the function there are plenty of RAT setup tutorials.
(Jan 8, 2014 05:51 PM)Evil_Injection Wrote: [\[CITE\]](#) Yes disabled both av, firewalls etc.

Upload your unencrypted server on www.anubis.iseclab.org

Evil_Injection - January 8, 2014, 5:02 pm

Theyre on maintenance now x,x

blabla

Firex1 - January 8, 2014, 5:04 pm

Thanks for the quick reply and help. Great service you offer.

controlpanel - January 9, 2014, 12:29 am

IS RAT WORKING ON PRIVATE NETWORK?

LOOK I AM NORMAL USER WHICH CREATE A SERVER(I KNEW MY SERVER WORKS ON NORMAL INTERNET USING PC) BUT I WANT TO KNOW IS MY SERVER WORKS ON PN.

Amala Paul - January 9, 2014, 3:08 am

Hi. Having problems with my Dark comet 5.3.1

I have updated the client details with no-ip (have also tried using no-ip installed).
Done every thing given in tutorials to setup the server.
Port is open (verified in canyouseeme)
Antivirus, firewall and defender disabled.
I use windows 7.
But when I test the stub on my own computer and also on anubis, slave is not shown on my list.

Can you help me with this please.

xVulnerable - January 9, 2014, 5:42 am

Do you have DUC no-ip updater running?

Alexander - January 9, 2014, 6:58 am

I was just wondering if you have any tips for infecting specific Habbo Hotel players to get their accounts. There's an extremely rich person on Habbo.no whose stuff I really want. This person is probably over 20 years old, so it would have to be a very well designed scheme. I'm willing to undergo quite a bit of effort. Could you PM me if you have any tips/guides besides the most obvious ways? Some technical help would also be nice. I know how to use and set up a RAT, but I'm not very experienced with crypters or binders.

xVulnerable - January 9, 2014, 7:22 am

I have no idea what Habbo hotel is.
You can try to set you up a nice legit looking website domain with a JDB. You can make it like a fake video site or something similar, then it's up to you to get him to the site.

If you don't know how to make one check out my RAT services:

Have you turned off all firewalls/AVs including Windows defender?

yohanda - January 10, 2014, 4:53 pm

(Jan 10, 2014 03:29 PM)xVulnerable Wrote: [\[CITE\]](#) Have you turned off all firewalls/AVs including Windows defender?

yeah i have :/ tried it with certain firewalls on and some on, tried it with everything off, tried a shit load of ports, nothing works ?

Durantchula - January 10, 2014, 4:58 pm

razor gave me a stub.exe and told me to replace it in njrat and the crypter would work but idk how to do tht can u help

xVulnerable - January 10, 2014, 4:58 pm

(Jan 10, 2014 05:53 PM)yohanda Wrote: [\[CITE\]](#) yeah i have :/ tried it with certain firewalls on and some on, tried it with everything off, tried a shit load of ports, nothing works ?

Well if you are 100% sure you turned off any sort of firewall/AV then you are not portforwarding corrently. Make sure you are listening to the ports on DC.

I suggest buying a VPN with portforwarding support and portforwarding from there.

(Jan 10, 2014 05:58 PM)Durantchula Wrote: [\[CITE\]](#) razor gave me a stub.exe and told me to replace it in njrat and the crypter would work but idk how to do tht can u help

I think he said to replace the stub he gave you with the stub you currently have on razor, not njrat.

Find the stub in your crypter's files and replace it.

Durantchula - January 10, 2014, 5:01 pm

(Jan 10, 2014 05:58 PM)xVulnerable Wrote: [\[CITE\]](#) Well if you are 100% sure you turned off any sort of firewall/AV then you are not portforwarding corrently. Make sure you are listening to the ports on DC.

ok i think im going to buy nvpn by the looks of it, is it best to buy with paypal or bitcoin, (could you explain how to buy with bitcoin, never done it before) also if im doing any sort of activities that are against the law.. could they trace me back to my vpn and see my paypal that i purchased it with ? ?

xT0r3nt- - January 11, 2014, 4:57 pm

Yo can you test my rat for me thanks

BloodGames - January 11, 2014, 5:53 pm

Hey, I need help with getting my users to connect to me. Darkcomet will let me infect and they can confirm they're infected, yet I don't see the users in my users tab. Was wondering what to do to fix the problem. Thanks in advance. -

Blood

xT0r3nt- - January 11, 2014, 9:04 pm

I have a question.. Say that you left your DC server link on youtube on whatever.. Then you decide to turn off your computer to call it a night. During when your computer is off, a person clicks your link and runs it, so will the person that left the DC link on youtube have the user/slave show up when he turns his computer back on

xVulnerable - January 12, 2014, 5:02 am

(Jan 11, 2014 03:14 PM)yohanda Wrote: [\[CITE\]](#) ok i think im going to buy nvpn by the looks of it, is it best to buy with paypal or bitcoin, (could you explain how to buy with bitcoin, never done it before) also if im doing any sort of activities that are against the law.. could they trace me back to my vpn and see my paypal that i purchased it with ? ?

No they cannot trace you as long as nVPN does not keep logs.

To use bitcoin, download a wallet such as Multibit and buy BTC by exchnanging with other users.

(Jan 11, 2014 06:53 PM)BloodGames Wrote: [\[CITE\]](#) Hey, I need help with getting my users to connect to me. Darkcomet will let me infect and they can confirm they're infected, yet I don't see the users in my users tab. Was wondering what to do to fix the problem. Thanks in advance. -

BloodDo you see your ports open on www.canyouseeme.org?

Did you completely turn off any firewall/AV?

(Jan 11, 2014 10:04 PM)xT0r3nt- Wrote: [\[CITE\]](#) I have a question.. Say that you left your DC server link on youtube on whatever.. Then you decide to turn off your computer to call it a night. During

Yes the user will still be infected even if your computer is turned off, therefore he will appear on your RAT when you open your RAT Client.

rdblInfr - January 12, 2014, 5:19 am

How can i test my servers. I have darkcomet and imminent monitor. And i use cube crypter. But when i test the servers on other computers in my home network nothing pops up.

xVulnerable - January 12, 2014, 5:35 am

(Jan 12, 2014 06:19 AM)rdblInfr Wrote: [\[CITE\]](#) How can i test my servers. I have darkcomet and imminent monitor. And i use cube crypter. But when i test the servers on other computers in my home network nothing pops up.

First make sure the unencrypted server is working, upload it on www.anubis.iseclab.org and you should get a connection.

rdblInfr - January 12, 2014, 5:57 am

I wanted to test it before but i always get this message: "this webpage is not available". Any Alternatives?

yohanda - January 12, 2014, 6:09 am

(Jan 12, 2014 06:02 AM)xVulnerable Wrote: [\[CITE\]](#) No they cannot trace you as long as nVPN does not keep logs.

Solspwee - January 12, 2014, 4:45 pm

Hey I'm having some issues with Imminate Monitor, my RAT is set up to a DNS via no-ip and a port on 3174. (Looks like this) http://youritguy.files.wordpress.com/2010/09/cisco_2.jpg so start is 3174 and end is 3174, for protocol I put both and I have the correct LAN address as well as the box checked. For some reason I'm not getting any response from the ratted computers, any idea what's going on?

When I tested canyouseeme.org it said it timed out, though any port I test times out.

I'm very green, thank you for your patience and support!

xVulnerable - January 12, 2014, 5:00 pm

You did not portforward correctly then. Make sure your firewall and AVs are turned off.

Solspwee - January 12, 2014, 5:14 pm

(Jan 12, 2014 06:00 PM)xVulnerable Wrote: [\[CITE\]](#) You did not portforward correctly then. Make sure your firewall and AVs are turned off.

Well I just turned off my AV and turned off my firewall; I still cannot see my clients or canyouseeme.org (port 3174 and I got a "connection refused"). Any more advice you can offer me :S?

EDIT: Your ISP is not blocking port 3174 though I can still not see my clients.

EDIT2: I found the problem, I used a bad DNS server (myftp.org) instead of (no-ip.biz).

BloodGames - January 12, 2014, 5:19 pm

(Jan 12, 2014 10:21 AM)xVulnerable Wrote: [\[CITE\]](#) Did you also remove any firewalls/AVs on the infected computer too? How do I do that? and I'm sure he turned his off as it was a slave and he was helping me test. He accepted, said I disabled his task manager, he could see it running, but he just wouldn't show up on my users list even when I tried to use / listen in on different ports with a new stub and all.

Understalker - January 12, 2014, 5:21 pm

(Jan 12, 2014 06:19 PM)BloodGames Wrote: [\[CITE\]](#) How do I do that? and I'm sure he turned his off as it was a slave and he was helping me test. Something is blocking the connection between you too, most likely the firewall.

Tell him to use the search tool in the bottom left of his screen and look up Windows Firewall. After

that, he can simply turn it off from there.

xVulnerable - January 12, 2014, 6:11 pm

(Jan 12, 2014 06:14 PM)Solspwee Wrote: [\[CITE\]](#) Well I just turned off my AV and turned off my firewall; I still cannot see my clients or canyouseeme.org (port 3174 and I got a "connection refused"). Any more advice you can offer me :S?

Get a VPN that supports portforwarding to fix your portforwarding issues.

Yes. A jdb simply downloads your file from a direct link. Your server still needs to be crypted.

Eternal. - January 13, 2014, 3:26 pm

I used to RAT a bit, but then I switched from windows. Are there any clients I can run from Linux to rat windows users? Or is it worth setting up an old machine and starting ratting again? Also is it a good purchase to buy installs here or no?

So many questions I'm sorry!

xVulnerable - January 13, 2014, 3:48 pm

So many questions I'm sorry!

Blackshades NET, Netwire and JRAT can be run on Linux.

Installs are to be botkilled in minutes so no.

yohanda - January 14, 2014, 10:17 am

so i got my darkcomet working, my friend tested it, but if he ends the process in task manager, it dissapears from my end, is this normal ? i checked all the settigns in the stub to make sure it didnt do that but still does..or is it because i havent crypted the file ?

it also dissapears from my infected users page in dc if he deletes it from regedit or ms config,

anyway to hide it better?

last question.. lol, whats a good cheap rat that has most options that DC has, such as remote desktop, upload and execute files, send voice messages, etc etc and whats a good cheap crypter thats FUD or atleast UD maybe like 47/50

xVulnerable - January 14, 2014, 11:33 am

It should come back if you tick persistent process in the builder.

Yes it's normal, to prevent the user from removing from msconfig or registry you can get a crypter with persistent startup.

My personal favorite RAT is Blackshades NET.

Pmed you about crypting.

ArsenG - January 14, 2014, 11:58 am

Well somehow my RAT doesnt work anymore, I've already got about 300+ peoples on darkcomet with an old file I created but now when I try to create a new file it just doesnt work...

I still get slaves by sending my old rat file but i can't create a new file with the same configs/setups.

There could be many things that could be causing this problem.
Are your ports open?
Are you listening to the ports?
Did you disable all AVs and firewalls?
Do you have DUC no-ip running?

Mr.M0j0 - January 14, 2014, 2:16 pm

Oops sorry did not see your post.
By C&C server you mean an http bot like xanity RAT?
And what do you mean by controlled by a programming language?

(Jan 14, 2014 03:22 PM)PandiZz Wrote: [\[CITE\]](#) Hey, whats the best dns to use for ratting. I heard no-ip could botkill you, and thats not fun.

Skype: raptor.rapist

Upgraded? No

RAT client: Blackshades

Superawesome?: Yes

No-ip has nothing to do with botkilling. Botkilling is a feature in some RATs which kills other servers on a machine to leave you the only one in control.

Saduto - January 14, 2014, 2:40 pm

Hey I need Methods on how to spread I have made a website with a direct link (download) FUD Crypted and All this = 0 Slaves

Mr.M0j0 - January 14, 2014, 2:46 pm

Yes, I mean an http bot. I forgot how they were called, so thx, now i found one.

I am thinking of writing software that uses an API and thereby has the ability to get information about the installs of the botnet and to execute commands and use features, like you would do in the panel.

xVulnerable - January 14, 2014, 2:55 pm

I don't do crypter recommendations.

rocki34 - January 20, 2014, 10:54 am

I saw that you made reverse proxy work perfectly on Imminent Monitor. What I do is right click on client > reverse proxy > select SOCKS5.

Then I go to the reverse proxy tab, copy paste the 127.0.0.1:(port) into my chrome proxy settings. However, it doesn't work, and I think it might have to do with no-ip stopping to work(because of proxy settings), which in turn stops the connection with my client.

Do you use no-ip? Do you use a different browser? Do you do anything different?

Thanks for any help.

xVulnerable - January 20, 2014, 2:15 pm

gaingaillo - January 20, 2014, 6:58 pm

How do i find out if my version of darcomet is backdoored, or if the crypter i'm using is giving away my slaves to someone else? I have suspects my slaves are being stolen. Are there ways to find out if they are? thanks in advance

zylok - January 20, 2014, 8:11 pm

I dont know if my question is dumb but is there some slave seller on HF ? Im looking to buy a lot.

WickedCruelty - January 20, 2014, 10:29 pm

Hey, lemmie ask something. Which torrent sites to upload my rat to spread (it's FUD) and which software u think i should bind it to? Hope you can help out, thanks ?

xVulnerable - January 21, 2014, 5:26 am

(Jan 20, 2014 07:58 PM)gaingaillo Wrote: [\[CITE\]](#) How do i find out if my version of darcomet is backdoored, or if the crypter i'm using is giving away my slaves to someone else? I have suspects my slaves are being stolen. Are there ways to find out if they are? thanks in advance

There are many ways to check if a file is backdoored or not, assuming by "backdoored" you mean infected. I'm not going to tell you how cause it would be a very long post and i don't have time for that.

Use this download source, it's safe. <https://hackforums.net/showthread.php?tid=3936945>

If by backdoored you mean as in losing your slaves then you would need to be a professional coder and know how to analyse software.

(Jan 20, 2014 09:11 PM)zylok Wrote: [\[CITE\]](#) I dont know if my question is dumb but is there some slave seller on HF ? Im looking to buy a lot.

Yes, head to the Premium seller section, there are plenty of bot shops.

(Jan 20, 2014 11:29 PM)WickedCruelty Wrote: [\[CITE\]](#) Hey, lemmie ask something. Which torrent sites to upload my rat to spread (it's FUD) and which software u think i should bind it to? Hope you can help out, thanks ?

The best torrent site would be PB, but you probably get your torrent and account banned in minutes unless done the right way. Search through the top 100 torrents for Windows applications and take an example from there.

bluesky56 - January 21, 2014, 5:56 am

Do you offer test istall in every SO? I want to test my rat ;-).

Nope, upgraded members only bud sorry.

gaingaillo - January 21, 2014, 11:31 am

I posted yesterday, thank you for your answer, it was useful. Now moving on:

Yesterday, a VIP slave started behaving strangely. First it came up red for the first time, also remote desktop was not working for the first time after the instal (4 days ago). (I'm using darkcomet). I fixed it by restarting the process with cybergate (wich i installed too as a for of backup, and included a regedit startup too). It worked good for 1 - 2 hours then i lost the slave while checking some files on remote. I'm pretty sure the slave didn't turn the pc off since i was monitoring the desktop, so i assume something happened.

Today i can't see my slave anymore. I'm pretty sure it's connected to the net since i can see it's skype contact online. The slave is not coming back either on darkcomet or cybergate. This is really strange as the antivirus license was not paid so there wans't any update. How do i get it back? Why did this happen? I'm using darkcomet downloaded from Plutonium's tutorial, and ICryptext, a free crypte from the crypter section. I suspect my slave being stole by one of these 2 being backdoored or something..

Thanks in advance.

xVulnerable - January 21, 2014, 12:23 pm

You can't be 100% sure if the slave is online or not. Also sometimes slaves can be lost on RATs, you just have to accept it as it is.

Could be using skype on a phone. Since you lost of both, this is probably the case. Unless he scanned his computer and detected both of your servers. Paid antiviruses don't have better detections.

Well you just said you used a free crypter, that's probably the reason. Free crypters are never FUD, they suck. If you're going to RAT, don't be a cheapass and pay for a good crypter, especially if you have VIP slaves.

Chances the crypter is backdoored and stealing your bots is very very low...

charliechelsea - January 21, 2014, 1:12 pm

Hi there.

I have (after much reading on this forum) created a rat disguised as a XBL MSP generator and currently have it on 4shared but what would be the best way of spreading it. it is crypted too.

gaingaillo - January 21, 2014, 1:17 pm

i use datascrambler with cybergate + imminent but sometimes on some slaves i see alot of autoit errors popping up, what could be the solution for that?

xVulnerable - January 27, 2014, 6:55 am

(Jan 27, 2014 07:39 AM)sNize Wrote: [\[CITE\]](#) i use datascrambler with cybergate + imminent but sometimes on some slaves i see alot of autoit errors popping up, what could be the solution for that?

That's when the crypter corrupts the file. It's a fault in the crypter.

Make sure you use the correct settings for .net applications on IM.

sNize - January 27, 2014, 7:03 am

(Jan 27, 2014 07:55 AM)xVulnerable Wrote: [\[CITE\]](#) That's when the crypter corrupts the file. It's a fault in the crypter.

Sorry for the late reply, i was unavailable.

You should talk to the crypter owner about that as the problem is coming from the crypter.

Swag Leader Juan - January 30, 2014, 9:20 pm

Ok I do understand it works but it isn't working for me, I run it at port 1604 and the port is open and I checked on canyouseeme.org, no-ip duc client running and ip/dns is set correctly, stub is not corrupted, avsoftware is off, can it be the firewall settings? If anyone can help me please post here or pm me your skype, im really desperate to get this fixed!

By the way this is imminent monitor, thank you in advance

Hi, i suggest to uninstall your AV instead of disabling it. Do that and restart your computer. Also are you only testing your server on your own machine? Upload on Anubis <http://anubis.iseclab.org/>, you should get a connection for a few seconds.

Swag Leader Juan - January 30, 2014, 9:35 pm

Make sure you turned off Windows firewall completely and Windows defender.

.jpg.exe - February 1, 2014, 8:10 am

Hey, I recently read your thread about njRAT and thought I'd give it a try. I've Tried to infect myself on a VM to see it working. when I run the .exe file as a administrator it seems to work fine. but when i go off the VM to look at the njRAT panel there is nothing there. Im kind of new to RAT's etc. is it similar to installing a keylogger?

Kind regards,

Azy2333

xVulnerable - February 1, 2014, 8:25 am

Sometimes RATs do not work when ran in your own machine/network.

The fact that you tested it on a VM and worked confirms that it works so you have nothing to worry about.

.jpg.exe - February 1, 2014, 10:37 am

Having no error messages doesn't mean your RAT is working.

If it's not showing up it's probably not set up right.

.jpg.exe - February 1, 2014, 10:51 am

what can i do when remote desktop doesn't work for me on a slave?

i can see his desktop, i can mark everything on desktop, but when i try to open the browser in the task bar - nothing happens.. but it gets colored in the taskbar, means the window has focus now and must be on top

in the window manager of the Rat i also see the browser window must be visible because its on top, but i only see the desktop!

and i have installed 3 different Rats on him, on all the same problem, computer restart on the slave didn't helped too..

what can i do? i would try teamviewer but i can't open the panel on him to see the connection details because it doesn't popup

sideinfo, hes using windows 8.. is anything blocking the remote desktop maybe?

xVulnerable - February 1, 2014, 5:07 pm

helsikke - February 2, 2014, 11:33 am

Hi, i need help please. I just sat up my rat. bought a crypter (DataScrambler). I am struggling with spoofing etc now. Basically i spoof it, it looks like a .jpg icons etc, but when i send it on skype to someone, it looks (from their perspective), like a .scr file with no proper icon. Is there any way to fix this?

xVulnerable - February 2, 2014, 11:49 am

(Feb 2, 2014 12:33 PM)helsikke Wrote: [\[CITE\]](#) Hi, i need help please. I just sat up my rat. bought a crypter (DataScrambler). I am struggling with spoofing etc now. There's no fix to this, you can try another spoofer/icon changer that might work on skype.

Does it need to be FUD? Also, what is a good file binder?

xVulnerable - February 6, 2014, 4:18 pm

(Feb 6, 2014 05:11 PM)Furroh Wrote: [\[CITE\]](#) Does it need to be FUD? Also, what is a good file binder?
Nope. Not sure if there are any free binders, if there are they are probably not FUD.
Most crypters have inbuilt binders which are FUD most of the time.

EvanLB7 - February 6, 2014, 4:21 pm

Thanks dude! He added me really fast and was really nice about helping me!

?A5? - February 6, 2014, 4:41 pm

Skype: honeydewx1

My stub is 1/35 Thanks! (I also have direct link)

BlueRaven - February 8, 2014, 9:04 am

I've had a very bad experience with this user.

I wanted a test install, and since I'm not a upgraded member he wanted me to pay for it, which I expected. Since the minimum amount I can withdraw from my cryptsy account is .01 BTC I had to pay him that amount but in return I would receive test installs until my RAT was working.

He keep telling me the crypter I bought was bad and tried to sell me crypting services.

He told me the RAT was corrupted but I later figured out that he was using it inside a VM, which wont work since the RAT has anti virtual enviroment.

After a while he told me to "fuck off" and refused to comunicate with me for no reason.

You are already listening to the port. You probably have another RAT open listening to that port.

Canterlot - February 10, 2014, 6:30 pm

Been away for a while from doing this Forgot when building the stub on dark comet to i use my ip or my no-ip host?

xVulnerable - February 10, 2014, 6:31 pm

(Feb 10, 2014 07:30 PM)Canterlot Wrote: [\[CITE\]](#) Been away for a while from doing this Forgot when building the stub on dark comet to i use my ip or my no-ip host?

Use your no-ip DNS and have DUC no-ip running.

Trap Music - February 10, 2014, 6:39 pm

How come when I close DC I lose all my vics?

xVulnerable - February 10, 2014, 6:54 pm

(Feb 10, 2014 07:39 PM)smithcory Wrote: [\[CITE\]](#) How come when I close DC I lose all my vics?

Probably they were offline and glitched which made them still show as online.

Or you do not have anto listening on which results in ports being closed.

Is jRat and BS is also good to keep my vip slave?
jRAT is not even FUD and Blackshades is alright.

perfectlysomber - February 14, 2014, 1:20 am

I'm having a difficult time knowing if this is a problem on my end or theirs. I'm using njRAT 0.6.4. I use DUC and have the host set up, ports are forwarded. Right now I have a connection but it keeps showing, Conencted, then ConnectionReset 0? It keeps going back and forth to connecting then reset. Any help?

xVulnerable - February 14, 2014, 3:47 am

Probably a problem from their side.
You should get another bot to see if the problem persists.

When i reFUD the file in the slave's PC do i have to manually do it for all the slaves?

xVulnerable - February 16, 2014, 5:50 am

(Feb 16, 2014 05:51 AM)Ballistas Wrote: [\[CITE\]](#) When i reFUD the file in the slave's PC do i have to manually do it for all the slaves?
Obviously if you want all your slaves with a FUD virus.

Ballistas - February 16, 2014, 5:58 am

So if i have 1000 slaves, i have to do it for each, one by one?

xVulnerable - February 16, 2014, 6:02 am

(Feb 16, 2014 06:58 AM)Ballistas Wrote: [\[CITE\]](#) So if i have 1000 slaves, i have to do it for each, one by one?

Yea, just select all the slaves, right click and upload your file.

Ballistas - February 16, 2014, 6:06 am

Oooh, thank you for your help! Very good support ?

Bet - February 16, 2014, 6:16 am

What's the best way to spread? I've tried ebooks and everything, and i'm still struggling.

Elue - February 16, 2014, 6:22 am

what is the best way to infect my friend who has latest updated AV

I want infect him, and keep for long

xVulnerable - February 16, 2014, 6:23 am

(Feb 16, 2014 07:16 AM)Tick Wrote: [\[CITE\]](#) What's the best way to spread? I've tried ebooks and everything, and i'm still struggling.

Torrents and youtube. Would say JDB but they're patched atm.

(Feb 16, 2014 07:22 AM)ashish.1003 Wrote: [\[CITE\]](#) what is the best way to infect my friend who has latest updated AV

I want infect him, and keep for long

Get a FUD crypter and keep updating the server when it gets unFUD.

Ballistas - February 16, 2014, 12:54 pm

Hello again. How can i mine with my slaves, when i am using a rat, that does not have a mining option built in, for example njRAT, will it be cheaper overall than buying a paid rat with equipped miner? Thanks alot for your help desk!

xVulnerable - February 16, 2014, 1:06 pm

(Feb 16, 2014 01:54 PM)Ballistas Wrote: [\[CITE\]](#) Hello again. How can i mine with my slaves, when i am using a rat, that does not have a mining option built in, for example njRAT, will it be cheaper overall than buying a paid rat with equipped miner? Thanks alot for your help desk!

You can either buy a RAT with an inbuilt miner such as Plasma RAT or buy a silent miner and execute the file on your slaves.

Hmm you must be doing something wrong.

Open cmd and ping your no-ip dns. Are packets successfully sent and received?

tomtom1996 - February 18, 2014, 1:21 pm

yea i am getting 4 pings back in about 30 ms time. -> if you don't mind to carry this conversation somewhere else a bit more private? :D (i have skype :P)

greetz tomtom

CrypticX - February 18, 2014, 1:21 pm

I have some question about RAT's and Botnet's that i'm really curious to know.

1. Can you get caught by infecting computers?
2. How big are the chances to get caught?
3. Some people suggest you to use a vpn, but i've seen a post on the forum from a IT-forensics guy who says that finding someone who is behind a vpn is extremely easy to trace back even with a vpn that keeps no logs(he says every vpn keeps logs) o.O. So the question is why would you need a vpn if you get traced very easily?
4. What are some good ways to make some money out of bot's?
5. Can you suggest me some good ways to avoid being caught?
6. What is best ratting or botnetting?

xVulnerable - February 18, 2014, 1:39 pm

(Feb 18, 2014 02:21 PM)tomtom1996 Wrote: [\[CITE\]](#) yea i am getting 4 pings back in about 30 ms time. -> if you don't mind to carry this conversation somewhere else a bit more private? :D (i have skype :P)

Get a VPN that supports portforwarding.

zapata17 - February 20, 2014, 7:32 am

Hi ,
first of all excuse me, i don't speak english fluently
i have a problem when using all rats, i tried njrat, DC, xtreme, poison, and spygate. so when i used all the first rats no one works but Spygate , unfortunately spygate have no webcam control option!
so, all the first rats did not work, i don't know why. my internet connection is through a wireless (free hotspots, in France) , i mean i have no modem nor router. i have just a wireless usb i put it in my pc . It is like who connect to internet from hotel or train station.
when i created servers, i send them to my 2nd pc that has a different ip coz it has its own wireless usb too. but when i click on the server i sent to this 2nd pc nothing happens
i am wondering what is the problem. even i used all correct setup of servers but no way. if the spygate did not work i would think to the problem of my wireless or the fact i have no modem or router to forwarding . Do i need to forward port, and how can i do it in my case?

when i use no-ip duc 2.2.1, i see this: - updating to iIP: internal 78***** and sometimes: - updating to iIP: internal 0000 (four zero)! some people talk about an ip who started with 192*****, but in my case i have never been this kind of ip, because i have no router nor modem

Now even Spygate doesn't work :(

please help me
thanx in advance

xVulnerable - February 20, 2014, 7:59 am

Does not matter if you're on wireless or not.

Yes you need to portforward, if you do not how you must buy a VPN that supports portforwarding such as nVPN.

nvidiaGEFORCE - February 20, 2014, 8:22 am

Hi

I'm using DarkComet + 143 VPN + No-IP DUC.

I tried injecting myself using 127.0.0.1 and it worked.

I tested to my friend using my No-IP host, and he says he sees the fake msg pops out, but he doesn't appear in my DC - this one is FUDed. I tried <http://anubis.iseclab.org/> using my unencrypted server, and it doesn't appear in my slave list either. Any thoughts?

Ports are forwarded and open.

Thank you

xVulnerable - February 20, 2014, 8:31 am

Portfotwarding is required inorder for you RAT to work.

You need to first have your port opened from your router settings then listen to it from your RAT and not utorrent.

zapata17 - February 20, 2014, 9:57 am

(Feb 20, 2014 10:13 AM)xVulnerable Wrote: [\[CITE\]](#) Portfotwarding is required inorder for you RAT to work.

Try using a stealer to get her password if it's saved in the browser. Some RATs have stealers inbuilt.

Or execute an .exe on her that will delete the cache and cookies so she would have to login.

Elue - February 24, 2014, 1:00 pm

Find someone to make you a program which will delete the cache and cookies when executed.
Execute it on your slave.

SuperMan-- - February 24, 2014, 1:28 pm

I need Some advice lol, well i have bought IM (Imminent Monitor) and do Have njrat i have a question what is the best Cryptor for Both of them ? Both!!

And My Last Question is When i refresh the passwords in IM nothing Happens ?

Is that a Bug ? Or What ?

xVulnerable - February 24, 2014, 1:34 pm

(Feb 24, 2014 02:28 PM)SuperMan-- Wrote: [\[CITE\]](#) I need Some advice lol, well i have bought IM (Imminent Monitor) and do Have njrat i have a question what is the best Cryptor for Both of them ? Both!!

I don't do crypter suggestions sorry.

If nothing happens then most probably there are no saved passwords.

Flummox - February 24, 2014, 9:08 pm

Hey i'd like to know what a good file extension is to bind my rat to. I'm using darkcomet and I don't have a crypter. I would like to bind it to some sort of file that looks as it would be an image, or video, as I am using this along side with e-whoring. Also, How would I get that type of file extension? Thanks in advance I'll be on for a while so if anybody could pm me that would be swell.

xVulnerable - February 25, 2014, 6:48 am

(Feb 24, 2014 10:08 PM)Flummox Wrote: [\[CITE\]](#) Hey i'd like to know what a good file extension is to bind my rat to. I'm using darkcomet and I don't have a crypter. I would like to bind it to some sort of file that looks as it would be an image, or video, as I am using this along side with e-whoring. Also, How would I get that type of file extension? Thanks in advance I'll be on for a while so if anybody could pm me that would be swell.

You need a binder, extension spoofer and an icon changer.

Most crypters have these built in.

anonymous233 - February 25, 2014, 7:07 am

Hey there - if your online could you pls write me a pm with a your skype account? i need some help - i could write mine down here too if you want

Would be great if you could answer me!

Elena Gilbert - February 25, 2014, 7:13 am

Hello,

i've been trying to use RAT since ever but never worked first ISP didnt have outcome ip just income now im in a new ISP and i want to try it i have done everything but still isn't working i would like some help please :) thank you.

skype : rawad.tawil

anonymous233 - February 25, 2014, 7:27 am

Hey there again,

since you wanna me to post my questions on here i will do it :)

Im searching for a RAT thats like DarkComet with watching desktop spying through webcam and stuff - im not planning to hold like 100k bots, but it should be hard to remove like PlasmaRAT is - i like that RAT very much, but it does not have any watching desktop/webcam/hearing throw mic and other stuff like this.

Just a RAT with this features what is hard to remove and stable, price is no problem - hope you could tell me if you know such ones

xVulnerable - February 25, 2014, 7:35 am

No RAT is difficult to be removed if a user has basic knowledge on how malware works.

Denverr - February 25, 2014, 8:21 am

Hi.

Would this be possible?

If I bought a specific rat and put the program onto a USB, and then connected the USB to a laptop.

The problem is, I can't extract the files off the USB because I need a password to log into the laptop and I do not know that.

So would it be possible for somehow the rat extracts itself so it can log in and I can control the laptop from my home computer?

Or is there anyway I can reset the password (not change it) so I can enter the USB with the rat files and then extract them onto the laptop so I can control it with my computer.

If there is a way to reset the password WITHOUT logging or, or doing any technical things, then it would have to be fast aswell, I can't sit there for about half an hour resetting the password.

xVulnerable - February 25, 2014, 8:36 am

But sir , i didn't start to learn coding to make a RAT , i do that and i solve problems on online judges and so ..

I'm just asking to show me the way , and i'll move on :)

connorp123 - February 26, 2014, 12:58 am

I just posted a thread about this but then saw your thread and you seem very helpful so I decided to ask you instead. I'm new to ratting and don't want to spread it to hundreds of people, just to some of my friends. Is there any way I can do this for free? I know Dark Comet is free but do I have to crypt it before I can send it to them? And if so is there a way I can crypt it for free?

Thanks :)

xVulnerable - February 26, 2014, 5:11 am

You can find a free crypter but it won't be FUD so there's a great chance it would be detected by an AV. You can also pay for single crypts like \$2/crypt instead of buying 1 month packages.

(Feb 25, 2014 07:05 PM)theman001 Wrote: [\[CITE\]](#) hey u have sype please pm me ur skype, i need help with rat and vpn

You need to execute your DC server from Blackshades stealth.

(Mar 2, 2014 02:10 AM)Graffiti1 Wrote: [\[CITE\]](#) Executing FUD Imminent Monitor 3 stub on 231 slaves makes only three connections appear on IM. What is the issue?
Your server is probably not FUD.

Jaatinen - March 2, 2014, 8:49 am

Can I have test install for my crypted server? Since I don't know does it work or is it corrupted.

Would really appreciate that :)

Graffiti1 - March 3, 2014, 5:31 am

It is FUD. I scanned it, 0/31 on anonscanner.

DeadBeam - March 3, 2014, 5:51 am

Hey,

I use FileGuardian with DC and njRAT.

But it seems that FileGuardian doesn't support njRAT.

Also,

I always choose the .exe extension and then I spoof it to .avi or .wav

but when I post it on skype or something, the download says it is a .scr file (screen saver)

I think some computers refuse to download this kind of files.

Help please?

Thanks

chris811 - March 3, 2014, 6:24 am

I cant port forward in DarkComet!! I've followed all the instruction from tutorials but im still having problems. Im using the old DarkComet 4.0, when i tried to Test Network in the Network Setting i get this (Localhost was successfully connected to port: 1604 / LAN (192.168.1.xxx) was successfully connected to port: 1604 / xxxxx.no-ip.biz was not successfully connected to port: 1604). When i tried using ProXPN(free), i cant use No-ip DUC, so my questions are, 1.Can i use DarkComet without No-Ip, can it work and what will happen if i use my ip? 2.Are there other open source RAT that i can use without port fowarding? Note:I cant use anything that has to be paid because i dont really have the money to pay for it. Thanks in advance.

CrypticX - March 3, 2014, 10:32 am

I've decided to start ratting but i don't have any vpn, and i'm also a bit scared :p

is there any free vpn that supports portforwarding until i make some money to buy a vpn?

haxcode - March 3, 2014, 10:48 am

hello vulnerable, i find it very good that u support users here. my question is what would u recommend me to do, to make my server fud? i am working with hexediting and i made it ud in scantime but not runtime ;) thanks

xVulnerable - March 3, 2014, 12:31 pm

(Mar 3, 2014 11:48 AM)haxcode Wrote: [\[CITE\]](#) hello vulnerable, i find it very good that u support users here. my question is what would u recommend me to do, to make my server fud? i am working with hexediting and i made it ud in scantime but not runtime ;) thanks
Free crypers are not good enough, a FUD paid one is highly suggested.

(Mar 3, 2014 11:32 AM)Str8ballin Wrote: [\[CITE\]](#) I've decided to start ratting but i don't have any vpn, and i'm also a bit scared :p

Tobigtobesmall - March 5, 2014, 5:25 am

Hello, i have one question to make, i have a RazorCrypt. Do you know how to set up darcomet for it ? What to mark/unmark, i was looking on here, i found 1 guide but those links, of pictures doesnt work, and its quet old, also i tried to contact him, he is kinda busy and didnt responded for 3 days.

Additional question

If you do know this :

When i crypt my stub from Darkcomet, using razorcrypt i tested on my self, its works, but there are some problems that i have never seen on any crypters. With this crypter when you restart computer, turn on again the file that you are infected ask for administrator rights, if i press no i dissapier from the list.

Iam asking this becouse all my slaves dissapier after next day, i can't do anything.

xVulnerable - March 5, 2014, 9:17 am

You don't need to mark anything, they are all optional. Make sure you add startup when building your DC server.

For your problem try not using startup on razor and use startup on darkcomet as i mentioned before.

I doubt that's really happening. How do you know when the bot is offline or not? Don't worry its working fine as long as it works on sandboxie.

jackbaur57 - March 5, 2014, 9:06 pm

how can get keylogger that support unicode language... like japaneses , chineses, etc

how can you port forward this vpn? I currently own it now:p the rat im using is imminent monitor.

BoomShot - March 6, 2014, 10:02 pm

(Mar 6, 2014 11:00 PM)ogtrapz Wrote: [\[CITE\]](#) how can you port forward this vpn? I currently own it now:p the rat im using is imminent monitor.

Sorry for posting on your helpdesk xVulnerable, but I'd like to answer his question.

To port forward on nVPN go to: <https://nvpn.net/memberss/index.php>

Sign in on the client area, then locate the port forwarding.

Put the port that you're listening to on Imminent Monitor and restart nVPN.

It should be port forwarded now.

Kevin?? - March 6, 2014, 11:24 pm

Or you can use a VPN with portforwarding support.

I'm getting a bit confused now?

Php RAT what is that? Never heard about it ?

Are they free? Can you name me one please?

EDIT: Do you mean a botnet?

r3q85 - March 7, 2014, 2:37 pm

crypted with Razorcrypt but still not work, and my friend cant delete it now lol! nvm i maybe take a mentoring pass in few days

xVulnerable - March 7, 2014, 3:06 pm

(Mar 7, 2014 03:37 PM)r3q85 Wrote: [\[CITE\]](#) crypted with Razorcrypt but still not work, and my friend cant delete it now lol! nvm i maybe take a mentoring pass in few days

Then you are probably setting up the server wrong.

Make sure the computer you run it on has no AVs installed, windows defender and firewalls turned off.

Make sure you havr DUC no-ip running & ports open on www.canyouseeme.org

(Mar 7, 2014 03:18 PM)Str8ballin Wrote: [\[CITE\]](#) I'm getting a bit confused now?

Php RAT what is that? Never heard about it ?

Are they free? Can you name me one please?

EDIT: Do you mean a botnet?

Xanity RAT is a php RAT.

They work similar to a botnet.

FoShoLeh - March 7, 2014, 5:03 pm

When I try to make a stub it never works when I try to infect my self. I execute the file but it never shows up on Darkcomet (I'm using Darkcomet). I've port forwarded and and used No-Ip ?

r3q85 - March 7, 2014, 5:11 pm

Not sure that i understand well, you say the victim must have turned off all security if i want to take the control ? (no prob with port)

xVulnerable - March 7, 2014, 5:23 pm

(Mar 7, 2014 06:03 PM)FoShoLeh Wrote: [\[CITE\]](#) When I try to make a stub it never works when I try to infect my self. I execute the file but it never shows up on Darkcomet (I'm using Darkcomet). I've port forwarded and and used No-Ip ?

Make sure DUC no-ip is running and ports are open on www.canyouseeme.com

Also uninstall any AV and turn or Windows defender & firewall.

CrypticX - March 8, 2014, 11:02 am

If my bots are mining for me, will my electricity bill increase? Or it doesn't have any effect?

Look at this picture

http://www.symantec.com/connect/sites/default/files/users/user-2935611/zeroaccess_blog_infographic.png

FoShoLeh - March 8, 2014, 11:15 am

Wow thanks it worked!!!!!! i really appreciate it

xVulnerable - March 8, 2014, 2:27 pm

No that 3,458 MWh/day is divided between 1.9M botnets.

So the average zombie computer uses 3,458/1.9M MWh because they are minning for you.

Having a bot minning for you uses great CPU/GPU power, resulting in using more electricity.

(Mar 7, 2014 06:11 PM)r3q85 Wrote: [\[CITE\]](#) Not sure that i understand well, you say the victim must have turned off all security if i want to take the control ? (no prob with port)

No that is why you need to crypt your file before spreading.

(Mar 8, 2014 12:15 PM)FoShoLeh Wrote: [\[CITE\]](#) Wow thanks it worked!!!!!! i really appreciate it Glad to help.

You can use 127.0.0.1 since he's using the same ip address you have.

Linkin™ - March 9, 2014, 3:53 am

(Mar 9, 2014 02:28 AM)xVulnerable Wrote: [\[CITE\]](#) You can use 127.0.0.1 since he's using the same ip address you have.

My slaves are on the RAT and my port is open, however, when i run it on his PC it shows the file on Task Manager but he doesn't appear on my RAT :/

xVulnerable - March 9, 2014, 4:08 am

(Mar 9, 2014 03:53 AM)ShakyDoo Wrote: [\[CITE\]](#) My slaves are on the RAT and my port is open, however, when i run it on his PC it shows the file on Task Manager but he doesn't appear on my RAT :/

Is your file crypted? Did you turn of all AV/firewalls on your computer?

Linkin™ - March 9, 2014, 4:11 am

(Mar 9, 2014 04:08 AM)xVulnerable Wrote: [\[CITE\]](#) Is your file crypted? Did you turn of all AV/firewalls on your computer?

It's not crypted, but before I ran it I disabled his avast av, it's running but disabled still he wont show up.

Could it be his firewall is the issue? If so, shall I disable his WIndows Firewall?

xVulnerable - March 9, 2014, 4:13 am

(Mar 9, 2014 04:11 AM)ShakyDoo Wrote: [\[CITE\]](#) It's not crypted, but before I ran it I disabled his avast av, it's running but disabled still he wont show up.

Could it be his firewall is the issue? If so, shall I disable his WIndows Firewall?

If it's not crypted you need to turn off or possibly uninstall an AV, windows defender and firewall on the computer.

Linkin™ - March 9, 2014, 4:16 am

Why would I need to uninstall it tho? I disabled it so it shouldn't be blocking anything :/

EDIT: I just disabled and uninstalled everything but it still won't work on his PC

xVulnerable - March 11, 2014, 2:27 am

(Mar 9, 2014 04:16 AM)ShakyDoo Wrote: [\[CITE\]](#) Why would I need to uninstall it tho? I disabled it so it shouldn't be blocking anything :/

EDIT: I just disabled and uninstalled everything but it still won't work on his PC

Sometimes some AVs such as Norton will still interfere with the RAT for some reason. You're doing something with the setup.

Yes Windows defender must be the problem then.

Test it on your own pc, if it doesn't work try on another computer.

Make sure you turn off everything on the comp you test it on too.

banshee021 - March 18, 2014, 9:00 am

Ok i have just tested it on another computer turned everything off and everything was ok the file i selected was binded to it and it was running on the computer but now its not showing up on DC. I don't know whats wrong with it maybe it was not configured properly but i did follow lots of tutorials on how to set it up. Any help is much appreciated.

will you also cover rat preparation for android phone and the methods on how to install it on phone remotely?

im very much interested in your course.

thanks in advance

best regards,

Akki

I'm not familiar with AndroRAT sorry.

Forward™ - March 18, 2014, 3:54 pm

Hello, I recently got my rat and was wondering if you could help me with a test install? I got TV and skype: furytrick

quint3 - March 18, 2014, 4:05 pm

I have this question i see a lot of so called "FUD" crypters but i wanna understand

What is the difference between a Scantime & a runtime crypter

some crypters express they are both scantime & runtime crypters

while some only express themselves as "FUD" does that mean only scantime fud?

Also if a scantime fud file is ran, will someone's av pick up the virus even if its scantime FUD, because the dropped file would be runtime unfud?

Thanks.

xVulnerable - March 18, 2014, 4:19 pm

(Mar 18, 2014 03:54 PM)YUnoWOK Wrote: [\[CITE\]](#) Hello, I recently got my rat and was wondering if you could help me with a test install? I got TV and skype: furytrick

Only upgraded members get free test installs.

(Mar 18, 2014 04:05 PM)quint3 Wrote: [\[CITE\]](#) I have this question i see a lot of so called "FUD" crypters but i wanna understand

What is the difference between a Scantime & a runtime crypter

Also if a scantime fud file is ran, will someone's av pick up the virus even if its scantime FUD, because the dropped file would be runtime unfud?

Thanks.

Scantime FUD is FUD whenever the file is scanned.

Runtime FUD is FUD whenever the file is ran in memory.

A scantime FUD file will get detected as soon as it's ran.

When someone says FUD, they are normally refering to both scantime and runtime.

Flutter - March 18, 2014, 4:20 pm

I just setup my RAT but I'm not entirely sure if it fully works yet, could I by chance get a test install to try?

xVulnerable - March 18, 2014, 4:24 pm

TheRostifer - March 21, 2014, 3:50 pm

Hi, great work, love what you're doing for the community.

Does njRat have known incompatibility with NO-IP DUC? for some reason when I test the server in Sandboxie using 127.0.0.1 it works fine, and then when I start the DUC and run the server again it doesn't want to work. Am I just being stupid or do you have any ideas?

Thanks in advance.

EDIT

Also upon DUC start-up i'm getting the error message "Attempt to read or write Protected Memory This is often an indicating that other memory is corrupt."

xVulnerable - March 21, 2014, 4:08 pm

(Mar 21, 2014 03:50 PM)TheRostifer Wrote: [\[CITE\]](#) Hi, great work, love what you're doing for the community.

No DUC has nothing to do with RATs. The problem is most likely having closed ports.

TheRostifer - March 21, 2014, 4:11 pm

(Mar 21, 2014 04:08 PM)xVulnerable Wrote: [\[CITE\]](#) No DUC has nothing to do with RATs. The problem is most likely having closed ports.

I've switched to FreeDNS, works beautifully, gonna use that from now on. Thanks for the help though.

sab0 - March 21, 2014, 4:16 pm

Question: What is the best rat of ur opinion ?

Im using DC .

Do you have DUC no-ip running correctly?

Try uninstalling your AVs rather than disabling them.

(Mar 23, 2014 09:44 PM)FriskyMicrobe77 Wrote: [\[CITE\]](#) No when I run it, it says access denied but in spanish because he is a mexican. Why does it say access denied could it be his virus protection blocking it?

Yes, getting the error means that it has been sucessfully executed.

Getting the error is because there must be something wrong with your server, probably the crypter you're cryptig with.

(Mar 23, 2014 09:50 PM)jroh97 Wrote: [\[CITE\]](#) Everything setup. Ports Open and everything. Created a Stub using localhost but when I use my DNS or no-ip, it doesnt work.

Uninstall all AVs and make sure DUC no-ip is running.

zero-000 - March 24, 2014, 4:10 am

yes DUC is running correctly

i did uninstall my AV but still have the same problem

It's cause you are using Darkcomet and Darkcomet has a bug that slaves tend to go offline and keep showing on your client until the client is restarted.

DaPiranha - March 26, 2014, 4:02 pm

(Mar 26, 2014 03:56 PM)xVulnerable Wrote: [\[CITE\]](#) It's cause you are using Darkcomet and Darkcomet has a bug that slaves tend to go offline and keep showing on your client until the client is restarted.

So I am guessing Darkcomet shouldn't be used. What's another good free rat that is stable and will provide the same sort of features that Darkcomet has?

Have you tested on another machine and different network? Sometimes it doesn't work on the same computer.

Real Muthaphukkin G - March 27, 2014, 5:37 pm

(Mar 27, 2014 05:21 PM)xVulnerable Wrote: [\[CITE\]](#) Have you tested on another machine and different network? Sometimes it doesn't work on the same computer.

No that i have not done,

don't have access to any other system ?

is there a work around?

xVulnerable - March 27, 2014, 5:38 pm

As i said before it might not be working for the reason i stated above.

isbahern22 - March 27, 2014, 7:06 pm

(Mar 27, 2014 04:28 AM)xVulnerable Wrote: [\[CITE\]](#) Have you turned off all Antivirus and firewalls.? Are ports open on www.canyouseeme.org?

No. That is why you need it crypt it with a FUD crypter.

I see... Thank you very much for quick response. Hmmm what if I have an access to the computers with the firewall.. I am the one who will install the client to the computers I want to infect, because I have an access on each and every computers, I am RATting for monitoring purposes on a LAN.

One more thing... What would be your suggested FUD crypter? TIA

Saberan - March 27, 2014, 7:58 pm

Then uninstall any AV, turn off windows defender and turn off windows firewall and it should work.

demoncrest - March 28, 2014, 3:44 pm

Skype: hf.demoncrest

Have TV?: Yes

Hey there xVulnerable, I was looking to chat on skype about the current trends of RAT'ing / Crypting. When I work with RATs it is usually in cycles of 6 months-1 year on, 6 months - 1 year off, so I am always a little bit out of the loop whenever I wish to start things back up again. I wouldn't need any help setting things up (with the exception of JDB's if I decide to go that route this time around... still no idea if I will though)

If you have some time to chat about these things in general, I'd really appreciate it.

Looking forward to your reply. Also, if possible could you copy and paste your reply into a PM to me as well? I don't check back all that often, but I will try to more often over the next few days.

Thanks!

Ah, I see, sorry about that... I thought you would be doing that as well.

Well, if it's just in-thread help, then I was just curious about asking your recommendation on the preferred route to go for getting miners on slaves.

Which of these routes do you believe is a better path to take?:

Andro -> Buy & Use Crypter -> Spread -> Use downloader function of Andro to download crypted miner bins onto slaves

RAT (Plasma due to Cryptocurrency miner) -> Buy & Use Crypter -> Spread

The way I was educated previously was that since Andro has rootkit, it's advised to go that path as it will hold slaves easier, and then any other needed tools (ex. Another RAT, Miner, Stealer) could just be dropped onto those vics.

Your thoughts?

xVulnerable - March 28, 2014, 5:19 pm

An HTTP botnet is always better for keeping bots, so Andro.

Not sure why that's happening. You probably still have something blocking it such as a firewall.

Have you turned off your firewall? Also uninstall any AV.

Man Bear Pig - April 2, 2014, 3:58 pm

I cant seem to port forward right because my router needs a inbound ip as well as the port which means i need the ip of anyone i give my rat to. do you have any suggestion to how i could fix this?

Does the same happen without crypting the server? Probably not.

If so, try using different crypting settings.

Flafee - April 3, 2014, 11:53 am

On JRat I keep getting an error on my socket. It keeps saying it's disconnected with the error of:

SocketException: Socket Closed

I can't figure out why it keeps saying that there is an error because when I test it on my own computer it links with the server and connects, but the socket keeps saying that it's disconnected for some reason. Is there a way I can keep the errors from occurring?

Lolerbeans12 - April 3, 2014, 11:56 am

Gonna copy/paste what I have posted here: <https://hackforums.net/showthread.php?tid=4150597>
NjRat v0.6.4/v0.7

Starting to get kind of frustrated with 0.6.4...

Sometimes, slaves that are constantly online will randomly disappear, for weeks!

Also, slaves will randomly disconnect with the error "TimedOut 0" then reconnect 10-20 mins later, sometimes a few days later.

Curious if NjRat v0.7 has this same issue?

But whenever I load up v0.7, the info bar at the bottom says I have connections, but my previous v0.6.4 slaves won't show up. (Is this normal? lol)

If v0.7 IS superior, will I have to re-infect? :Bebe-pleure:

njRAT is not stable in terms of keeping bots so it randomly loses slaves because of instability.

(Apr 3, 2014 11:53 AM)Flafee Wrote: [\[CITE\]](#) On JRat I keep getting an error on my socket. It keeps saying it's disconnected with the error of:

Something is blocking your slaves, most probably a firewall or AV.

Uninstall any AV, disable windows defender and turn off windows firewall. Be sure everything is uninstalled to be 100% sure.

Also make sure you are listening to your port on your RAT and open on www.canyouseeme.org

Let me know how this goes.

blackair01 - April 4, 2014, 10:40 am

ryan1ryan1 - April 9, 2014, 2:06 pm

when using blackshades i am receiving random bots.. i had the same bot appear ie username but was showing as different OS on the bots. i changed my no-ip domain and have also had a random bot appear with the changed domain ? any reason for how this is happening or what it could be?

My file is FUD with FileGuardian but it seems to be after i do the online file scanner check this started happening :/

all the random bots have under 300mb ram and a 8gb hard drive

xVulnerable - April 9, 2014, 2:25 pm

(Apr 9, 2014 02:06 PM)ryan1ryan1 Wrote: [\[CITE\]](#) when using blackshades i am receiving random bots.. i had the same bot appear ie username but was showing as different OS on the bots. i changed my no-ip domain and have also had a random bot appear with the changed domain ? any reason for how this is happening or what it could be?

Random bots which you did not spread for? Probably someone using the same VPN ip, RAT and port as you.

ryan1ryan1 - April 9, 2014, 2:27 pm

yea i have not spreaded at all. not using a vpn either

im using blackshades and the port recommended in the tut. but no vpn

all the random bots seem to have very similar systems aswell :s

it didnt start happening until i checked my FUD file online with the suggested scanner the crypter requests

xVulnerable - April 9, 2014, 2:30 pm

(Apr 9, 2014 02:27 PM)ryan1ryan1 Wrote: [\[CITE\]](#) yea i have not spreaded at all. not using a vpn either

Then your server is being analysed by AV companies.

ryan1ryan1 - April 9, 2014, 2:35 pm

i was thinking that with it only happening after running a scanner check.

it showed up on 2 out of 35 in the results..

anything you suggest to be safe ? as in what can result from them analysing

xVulnerable - April 9, 2014, 2:48 pm

(Apr 9, 2014 02:35 PM)ryan1ryan1 Wrote: [\[CITE\]](#) i was thinking that with it only happening after running a scanner check.

No you always need to portforward for Darkcomet.

hackersallin - April 11, 2014, 5:35 am

Nice service! I will ask if i ever have any problem! :)

makeittakeit00 - April 11, 2014, 2:24 pm

hello! I am interested in talking to you about yoru services, but as i do not have 25 posts yet, I cannot PM you.

my problem im having seems to be pretty unique. I have everything set up and have had 1 person connect (from romania randomly), which lasted about 3-4 seconds before it went dead and never came back. Besides that, I have tested the server on other pc's running from my router (just diff pc) and it works 100% of the time. I am also 100% FUD aND That is a positive (running byte crypter on netseal-great crypter fwiw).

besides that, I have medafire stats showing well over 1000 downloads as well as several torrent files that have been cleverly attached, and also have made several different servers and used various different proven spreading methods... my main pt is...something is clearly not allowing proper connection as I should have atleast a cpl recurring users by now.. but I have done EVERYTHING suggested in basic rat tuts (running DC btw to start, but want to get a premium rat once this issue is solved.

notes- all av, fw disabled. windows firewall disabled, port 1604 successfully connects 100% of the time on canyouseeme.org (I use no-ip.biz)

It's been almost a week since I've started this journey and I am really starting to get a bit frustrated.

your services would be well appreciated!
if u happen to be on skype and care to add me-
skype: justollamas@hotmail.com

Thanks for making yourself available for this kind of help. it is very much appreciated.

Enriched - April 12, 2014, 2:52 pm

Hey, it's Enriched

Im using DarkComet

Having trouble binding my server to a torrent. I tried, but when I download my Torrent, it just says connecting to peers for hours. Just message me on Skype. Thanks dude.

daniellsan - April 13, 2014, 8:16 am

Hey gonna copy paste what i wrote in my thread

Hey guys i just purchased Imminent Monitor and ive got some problems with it. the problem is that my slaves doesnt show up. I have portfowarded and canuseeme says the port is open and IM says that aswell. My crypter is fud and i sent my servers too about 30 ppl which have dowloaded it but i still dont get any connections. The thing is that on darkcomet my slaves shows up. Does someone know the problem and the solution?

Thanks

xVulnerable - April 13, 2014, 8:27 am

Which is the best FREE stable rat I can use?

Thanks

njRAT is good but lacks bot stability.

Darkcomet has bot stability but has very unstable features.

Check out jSpy.

xVulnerable - April 18, 2014, 10:16 pm

Online and available to help anyone with any questions!

Pandiet - April 24, 2014, 8:09 am

So i want to have a functioning rat and portforwarded using this; <http://prntscr.com/3czn0i> (I'm horrible when it comes the portforwarding, i'm basically horrible with anything that has do to with Internet.) I'm using a netgear router.

However, when i check if the port is opened on canyouseeme.org it says error, connection timed out.

it's set to TCP/UDP btw

Would appreciate some help greatly!

xVulnerable - April 24, 2014, 8:25 am

(Apr 24, 2014 08:09 AM)Pandiet Wrote: [\[CITE\]](#) So i want to have a functioning rat and portforwarded using this; <http://prntscr.com/3czn0i> (I'm horrible when it comes the portforwarding, i'm basically horrible with anything that has do to with Internet.) I'm using a netgear router.

Assuming you are portforwarding using the correct setting on your router, make sure you are listening to the port with your RAT and have disabled all Antivirus and firewalls.

jmcatena91 - April 24, 2014, 8:32 am

I have my rat put onto a vps and Im currently using njrat. The problem lies when I build the server. I I dont understand I can install it from a download to my computer and it works but its not working with other peoples computers? I make build server then send it from vps to main computer FUD it then when I bind it with a song using razorcrypt it wont even work on my personal computer? What am I doing wrong?

skype : shatheman91

xVulnerable - April 24, 2014, 8:36 am

Although it's FUD it may still be being detected by an Antivirus. So it would work on your computer since you have no security.

Also make sure you are using your no-ip dns instead of your localhost. 127.0.0.1

jmcatena91 - April 24, 2014, 8:40 am

it is my no-ip, I set it up on a vps and send it to my computer but ive had many people install it nothing i dont get it lol thanks though.

Pandiet - April 24, 2014, 8:52 am

(Apr 24, 2014 08:25 AM)xVulnerable Wrote: [\[CITE\]](#) Assuming you are portforwarding using the correct setting on your router, make sure you are listening to the port with your RAT and have disabled all Antivirus and firewalls.

Sure thing, i'll try this out mate.

-Disabled all security and firewalls.

Portforwarded using port 21 and my IPn4.

www.Canyouseeme.org still can't find it, <http://prntscr.com/3d01be> My darkcomet is listening to port 21.

xVulnerable - April 24, 2014, 9:04 am

Best thing you should do install your RAT in a Virtual machine.

Hide the Virtual machine, don't put it on your desktop etc.

rahul2993 - May 7, 2014, 1:15 am

What after RAT??

i got around 10-15 slaves as of nw.How can i spread through pendrive.Is there any other way to spread frm their pc.??

what does the script feature in njrat actually does??Any help is appreciated.Thanks

xVulnerable - May 7, 2014, 3:31 am

Script lets you run a VBS script.

To spread via pen drive just put the pen drive in and run the file manually.

Are ports open on www.canyouseeme.com?

Have you got any Antivirus installed?

Did you turn of Windows defender and firewall?

aj4x - May 10, 2014, 2:28 pm

Hi,

I have a question about my new RAT/Crpyter... It is completely FUD after initial install.. works perfectly against top 5 AVs. My problem is that when the target is running full AVG with ID enabled, a suspicious behaviour is detected just as the connection is made after startup...

I have the SC for my RAT/Crpyter and have tried a few variables (such as HKCU)... It's currently being copied into Appdata/.../Start after initial install and run from there after re-start...

Any suggestions on how I could tweak it?

Thanks so much for your help!

AJ

xVulnerable - May 10, 2014, 4:41 pm

It's not FUD if it's getting detected.

It may be FUD on scantime but not runtime.

Portforwarding is too much of a hassle sometimes.

Get a VPN with portforwarding to solve the issue.

You are probably having both RATs open at the same time while using the same port. A port can only be listened by one application at a time.

Close dc and restart IM and see if it works.

??ph??? - May 13, 2014, 12:51 pm

How is a Word exploit builder different from simply spoofing the extension into a .doc and having it open a document?

xVulnerable - May 13, 2014, 1:11 pm

(May 13, 2014 12:51 PM)??ph??? Wrote: [\[CITE\]](#) How is a Word exploit builder different from simply spoofing the extension into a .doc and having it open a document?
Spoofing doesn't actually change the extension, that's why it's called spoofing.

??ph??? - May 13, 2014, 1:42 pm

I have a question regarding a completely theoretical scenario in which a student (SWIM) would want to infect his teacher and change his grades on a web-based grading system by the name of PowerSchool:

<https://puu.sh/8KQlp.jpg>
<https://puu.sh/8KQqQ.png>

As you can see, this mischievous student used a .doc extension spoof for his RAT. It should install the RAT, and open an actual word file. The only problem is his school uses a school-wide network and he is not sure if he infects the teacher's computer if it will actually work, because someone told this student that school's computers are usually deepfrozen.

xVulnerable - May 13, 2014, 2:26 pm

(May 13, 2014 02:26 PM)xVulnerable Wrote: [\[CITE\]](#) It will work. Not sure what you mean by deepfrozen.

Thanks, I appreciate the help. My last questions:

1. What if I sign in to my account on a teacher's computer and install the RAT? Will I only be able to view stuff on my account, also her account when she signs in?
2. When I tried to open a random .exe, it required administrator's username and password. Will it do this as well, or simply open like that?
3. Since I'm trying to change my grades, is it possible to turn the computer on when it's off in the night? Or in any way access a webpage through her computer without her seeing it?

xVulnerable - May 13, 2014, 3:26 pm

1. You will only infect your user account.
 2. It was probably ran as amin.
 3. I believe Darkcomet has an option to turn off the monitor, you can use that.

Hi,

A big thanks for this thread and your others advices.

I would like to know something. Is there a way to "freeze" the screen of someone BUT be able to see and use his computer ?

=> I have a rat on a remote PC and I would like to be able to configure things without the person can see it (settings for her AV, firewall etc for example).

- Freeze the screen : The person see his desktop, nothing special for example, nothing move
- In same time I see his desktop but I have the control and can open things (I use remote Desktop with Darkcomet, I don't know if there is a way to do that)

Do you know what I mean ? I can use Darkcomet or others .exe on his PC, all advices are good.

I can pay you for this projet if you want, obviously.

Have a nice day and thanks for all the others advices.

NB : I ask that because it's ~often impossible to change settings via the registry.

=> I have a rat on a remote PC and I would like to be able to configure things without the person can see it (settings for her AV, firewall etc for example).

- Freeze the screen : The person see his desktop, nothing special for example, nothing move
- In same time I see his desktop but I have the control and can open things (I use remote Desktop with Darkcomet, I don't know if there is a way to do that)

Do you know what I mean ? I can use Darkcomet or others .exe on his PC, all advices are good.

I can pay you for this projet if you want, obviously.

Have a nice day and thanks for all the others advices.

NB : I ask that because it's ~often impossible to change settings via the registry.
No i don't know any RAT which has that feature.

WTFç - May 25, 2014, 11:11 am

Hey, my Skype is minecast404, can I get a test install? Thanks for offering this free service!

Yes just let me know what you need help with.

missionfox - May 27, 2014, 11:16 pm

New to RAT,
Not familiar to any coding,
and basically lack most knowledge in specific details.
I have gone through a tutorial of dark comet from Jinu and was able to set up one.
However, the system only works as I open the stub on my own PC(the one with RAT on).
I do understand that I will have to crypt the file to transfer it to other computers and further to remote control them without the alarm of AV.
Anyway, I tested it out with another computer and the outcome was quite confusing. No matter if I turn off the antivirus or not, encrypt the stub or not, the file would not execute, or it will just open up as a cluster.
Please tell me what may be possibly going wrong. Thank you
The ports are all listening (even though I have no idea what does that mean and what is it for), however many others seems to have the connection problem.
If you can recommend me a thread/book that will be helpful, that will be great too.
Help
Once again,
Thank you.

xVulnerable - May 28, 2014, 12:22 am

Make sure Windows firewall, Windows defender are off and any other AV is uninstalled on the computer you are tested on.

Robot-CEO - May 28, 2014, 3:43 am

Hi man! I recently made a "Rat" When i open it it doesn't pop up on Dark Comet, Is that normal? I need to test my rat could you test it? <3

Ah, some servers are buggy when it comes to portforwarding, just test each server out and portforward it and then test it out on www.canyouseeme.org

justmatty - May 28, 2014, 5:43 am

Hi, could anybody please help me? I have made my stub in DarkComet and have crypted it with RazorCrypt. I have infected multiple people, however when they restart their computer the RAT is gone forever. One of them even went to task manager on Windows 8, and I saw my stub open on startup, however this does not seem to happen. I have checked the boxes in order to do this on both DarkComet and RazorCrypt. Any help is appreciated - thanks!

Zelix - May 28, 2014, 5:44 am

Use the startup and persistence functions on the crypter, I can help you out, add my skype: xaiqiz ?

Zelix - May 28, 2014, 6:10 am

(May 28, 2014 06:05 AM)szymonex13 Wrote: [\[CITE\]](#) Hey there, one question.

What's up with the security on ratting?

What steps should I take to be 100% secure?

Already got VPN with no logs.

Create a dynamic DNS, do NOT use no-ip, it distributes their logs etc.

Buy a logfree VPN (you already got it).

Always be on your VPN when ratting and when spreading it. ?

xVulnerable - May 28, 2014, 6:54 am

Let's say someone were to have access to a LARGE amount of users, 100k+

The expected outcome would probably be 10-30k

How anonymous do you have to be?

A VPN or VPS wouldn't cut it, would it?

xVulnerable - May 31, 2014, 3:44 pm

(May 31, 2014 03:36 PM)MandMs Wrote: [\[CITE\]](#) Let's say someone were to have access to a LARGE amount of users, 100k+

I know you don't support jSpy but just wondering if you could figure it out ^.^.

That is most probably a network error. You might be not connecting due to a bad connection.

SwimmingPool - June 7, 2014, 4:12 pm

Is there anyway I could get some test installs? I just got my net setup with hosting. :)

Demonexile - June 7, 2014, 4:35 pm

Is it because I have a bad internet connection or the victim does? Also the other rats that connect are jrat,njrat, and darkcomet. I'm just wondering why wont this one connect? Hmmm, let me know your thoughts. Thanks in advanced.

Btw, I couldn't quote your post. For some reason I was getting "Undefined" as an error lool.

EDIT: Kk, that was weird LL. It doesn't work when I test it on my self/laptop with sandibox. But, it works with real victims. Nvm

Fixed.

3lectricWave - June 8, 2014, 3:06 pm

I have a few questions:

What crypter do you actually use?

What VPN do you use?

Best RAT and one you use? (I have a feeling you are paid by LuxNet because ATM it is very buggy for me)

How many victims do you have connected to you ATM?

What methods do you use for spreading? Not specifically but torrents? Omegle? etc.

Thanks in advance.

xVulnerable - June 8, 2014, 3:23 pm

So, I would like to know how to code a crypter for my R.A.T and also why, if i use a semi good crypter that it makes the file after crypted, why my slave (2nd comp) will not show up on DarkComet.

xVulnerable - June 13, 2014, 5:41 pm

There is no such thing as "semi FUD"

Latex™ - June 17, 2014, 8:48 am

I have made my RAT and now I need a test install to see if it works. Can you maybe provide me with one? If so PM me so I can give you the download link for the server.

;))

xVulnerable - June 17, 2014, 8:16 pm

PM me your skype for a test install.

Nice Net Bro - June 19, 2014, 4:15 am

Thanks for testing out my bin.

Thanks alot once again!

Nothing is encrypted and they can be easily be sniffed through wireshark.

You can scan on www.nodistribute.com

Vola - June 26, 2014, 9:46 pm

What are the best RATs on the market atm? I have plasma and used to have bshades (mistakes were made)

By the way, I don't mean free.

blackstriker_001 - June 27, 2014, 3:39 am

Hi,

I have got Imminent Monitor 3.4

Well i have been using it from past and it was somewhat working fine. I had to redownload it again. Everything was verified and now i am using the RAT. I do everything perfectly. Even my ports are open and listening. Checked even with canyouseeme.org. Even after that i execute my stub it does not work. I am not able to get the client in my RAT. I have tried this on my own system even but its not working. Please help is needed. Thanks.

Skype ID - blackstriker_001

Skype ID - blackstriker_001

It may be that it's being detected from the computer you are testing it on. Make sure you have all AVs uninstalled, windows defender and firewall.

(Jun 27, 2014 03:53 AM)Mr.Apple Wrote: [\[CITE\]](#) Hello I am having trouble setting up a BTC Miner for IM I'm not sure what it means when it says miner file?

I'm guessing the miner stub?

Seems like there's something wrong with IM. Contact IM support.

Vola - June 27, 2014, 7:57 am

That's the default form for vb.net or c#, which probably means there is some handled exception when you run IM3. Make sure your computer meets IM3's requirements.

xVulnerable - June 27, 2014, 7:58 am

(Jun 27, 2014 07:43 AM)Virtua Wrote: [\[CITE\]](#) What is your opinion of nanocore? Is it stable? Are there any public plugins for crypto mining?

Haven't used Nanocore much. Last time i used it, it had no keylogger which makes it useless.

xxtimelordxx - June 29, 2014, 8:38 am

hi. Can you use rat to get into an android phone and steal their facebook password? and can you explain to me how rat would do that?

xVulnerable - June 29, 2014, 9:30 am

(Jun 29, 2014 08:38 AM)xxtimelordxx Wrote: [\[CITE\]](#) hi. Can you use rat to get into an android phone and steal their facebook password? and can you explain to me how rat would do that?

Yes there are Android RATs such as AndroRAT.

Are you sure everything is off? Disable all AVs, disable windows defender and turn off Windows firewall.

Check if ports are open on www.canyouseeme.org/

mac4you - July 11, 2014, 10:37 am

I need port forward solution via teamviewer , using TP link router with dongle usb modem

MaatiZaouri - July 11, 2014, 11:25 am

Hi, My rat servers used to work a couple of days ago. However i cannot get it to work anymore. I am using No-ip but i can't find any substitute. Someone posted on my thread yesterday linking me to a tutorial for freedns so i followed and proceeded and it didn't work. I told them this and they quickly

enough removed their post on my thread. Either way i have rebooted my computer and have an issue with actually creating the connection between my computer & theirs. Besides using my no-ip domain(Not working) i have used my private ip and my public to try and none of them succeeded. I tried to install on my other computer and all that happens is two Run boxes come up; when i click run on both nothing happens. I don't have any connection with it through my rat. My port forwarding is perfect and i'm not sure what to do. Also do you know any sites i can upload an exe file onto for me to give out the download link. Thank you.

NestiALB - July 11, 2014, 11:46 am

But I cant get it to work over the internet.

I opened and forwarded the port in my router and checked it with <http://www.canyouseeme.org/> and it says "success". (tried different ports)

I've tried to build the server with my current WAN ip and with a dyndns.

But the server just wont connect. Any ideas?

Have you turned off your firewall, windows defender and uninstalled all AVs? Is DUC noip running?
Firewall and Windows-Defender are turned off. No AV installed und DUC is running.

I can't see any reason why the connection is blocked

xVulnerable - July 12, 2014, 7:46 am

Use your local host (127.0.0.1) when testing on your own network instead o your DNS.

I tried using a different DNS name and it worked bro.

I know 127.0.0.1 will work on my network, so will no-ip if I use it.

But I wasn't going to use it for illegal purposes, just testing haha.

Imagine that LOL.

ohw1337 - July 12, 2014, 9:32 am

(Jul 12, 2014 09:10 AM)xVulnerable Wrote: [\[CITE\]](#) What i can offer you is a RAT setup for \$10.

Use your local host (127.0.0.1) when testing on your own network instead o your DNS.

My router is a piece of shit -.-

It prevents port forwarding if the connection comes from the own network trying to connect to the WAN ip. How stupid is that?

So my RAT is working fine for everyone outside my own network :D

At the end that's how it should be, but for testing purposes it would have been nice...

Thanks for your help anyway!!

Letmehackbish - July 12, 2014, 11:23 am

Okay, you have helped me a lot, i just need help with one more problem, how do i bind the file, it there a program that can do it for me? or what? Once i bind the file i can upload it to a site without a warning message coming up right?

xVulnerable - July 12, 2014, 11:25 am

You can use a program to bind it, called a binder.

Most crypters have binders built in.

Letmehackbish - July 12, 2014, 11:36 am

Okay, but I want make the rat a download link so people can click it without a warning message coming up, any suggestions?

xVulnerable - July 12, 2014, 11:46 am

Please and thank you.

MaatiZaouri - July 13, 2014, 6:36 pm

My dark comet stub just doesn't make any victims, i've tried it on myself and other computer many times but it still doesn't work. I have all the settings correct and port forwarding setup. I've altered many domains alot and now i'm using a dyndns one and it just doesn't create a victim. I used to use no-ip until it randomly stopped working and now when i use dyndns it still doesn't work.

my port forwarding is working well.

I'm pretty sure it's being detected by Av because of the site i upload to because when i tried to download on both my computers chrome detects a malicious file. However aside from this i run the stub straight off of my desktop and it still doesn't work. Whenever i combine it with a picture and spoof it with a JPG fake extension it doesn't work, it just opens the picture and that's it no victim created.

I have made a fresh stub and each time i create one it doesn't work. Even when i change the mutex it still doesn't work either. Also i am using dyndns so i'm not sure if this is the problem

Another thing i just tried it changing the mutex a few times and saved stub to desktop; now i try to

open the file sandboxed and there is an error which occurs. I change my network settings to 127.0.0.1 and then try it and it works perfectly even though my port forwarding is successful [I have checked on canyouseeme.org] This makes me suspect the domain being the issue.
Any help is appreciated thank you.

You can only connect to your own network via localhost - 127.0.0.1 which you said you can do and you show up in darkcomet...

When you run the file that is connecting to your dns, you're connecting to your ip address, which eventually times out the connection, because you can only connect to yourself via localhost.

You need someone else to run the file, hopefully this guy will get you some test installs.

MaatiZaouri - July 13, 2014, 6:50 pm

rheostat - July 17, 2014, 7:16 pm

Im am trying to rat myself to test dark comet i have made over 20 different stubs only one has worked a binded stub but even that does not work now.

Host machine

no av on

no firewall on

canyouseeme says ports are open

windows 7

Client machine

no av on

no firewall on

windows 7

i have tried for the server

127. default

my public ip address

127 default +:200

multiple no-ip host

as i previously stated i got one of my stubs to work and it was unreliable and now does not work. any help would be greatly appreciated.

Disable Windows defender.

MaatiZaouri - July 17, 2014, 8:06 pm

xVulnerable You recommended me Jspy on my thread, you were saying it is FUD and etc. However i downloaded the beta and looked into other threads of it and it doesn't seem to have a crypter in it. Also you are only able to connect to local hosts so freedns is useless. Darkcomet seems to have a better crypter.

Monty Python - July 17, 2014, 8:14 pm

I need to ask you sir if I change my dynamic static ip address like my friend Sttarfall and ikonroi to comcast ip of 127.0.0.1 will my rat still be able to survive in my computer without food and water because I am very poor you see I come from the hood with my homie daquan were we trap out the bando with becky we to poor to pay attention u get what i am saying

xVulnerable - July 17, 2014, 8:31 pm

jSpy Beta has nothing to do with the current version, many features were added and a huge stability increase.

jSpy does not need a crypter, it will stay FUD for months without crypting it.
You can connect to any network not just localhost.

Darkcomet does not even have a crypter what are you talking about?

(Jul 17, 2014 08:14 PM)Monty Python Wrote: [\[CITE\]](#) I need to ask you sir if I change my dynamic static ip address like my friend Sttarfall and ikonroi to comcast ip of 127.0.0.1 will my rat still be able to survive in my computer without food and water because I am very poor you see I come from the hood with my homie daquan were we trap out the bando with becky we to poor to pay attention u get what i am saying

Change the IP your dns is pointing to your current ip.

Cpt.Conficker - July 17, 2014, 8:45 pm

I have CyberSeal and IM3. The current DNS I am using is the free dot afraid dot com or something like that for the alternative to No-IP. I am having issues with stable install.

Installs fine and I see client before crypt. But not so much after crypt. Kinda annoyed

Use the search function. And don't use jrat.

idramex - July 21, 2014, 2:15 am

I have a problem . When i update the server i have 2 bot's of each one . I want it to update the server not to add clones .

[img]http://img.techpowerup.org/140721/875.jpg[/img]

can i replace the old crypted file with the new and updated without having many clones ? This happens to me with Darkcomet & IM3 , Maybe because of persistence

Thanks .

xVulnerable - July 21, 2014, 2:22 am

(Jul 21, 2014 02:15 AM)idramex Wrote: [\[CITE\]](#) I have a problem . When i update the server i have 2 bot's of each one . I want it to update the server not to add clones .

Thanks .

The "Update" feature should automtically uninstall the old one. If not, manually unstinstall yourself.

idramex - July 21, 2014, 2:30 am

(Jul 21, 2014 02:22 AM)xVulnerable Wrote: [\[CITE\]](#) The "Update" feature should automtically uninstall the old one. If not, manually unstinstall yourself.

When i do uninstall the client . It just pops up again Like i didn't do anything . should i cancel persistence ?

ddosfun - July 21, 2014, 3:28 am

i've got a question:

if it is possible to make your rat file FUD, how in the hell are we sure that services like <https://hackforums.net/showthread.php?tid=4349733> do not include a virus?

xVulnerable - July 21, 2014, 3:47 am

You can crypt a file to make it FUD. Only download from trusted sources.

MIXSTAR - July 21, 2014, 6:40 am

if i use port forward on my modem , can the isp see and know what im using it for?
wich one is better to setup portforward on, in a modem or a router?

WinfieldBlue - July 21, 2014, 6:40 am

Your portforwarding from the modem won't work if you are connected with a VPN. That's why you need to find a vpn that supports portforwarding.

MIXSTAR - July 21, 2014, 3:39 pm

jSpy is a very stable RAT and you don't have to worry about bugs, not to mention it's 100% FUD so no crypter is needed. You can get a VPN to portforward.

kneato - July 24, 2014, 12:32 am

Hey..

After port forwarding, I ran the command, netstat -a in cmd, it was looked like,
[img]http://arehost.net:9090/photo_share/d5w19.jpg[/img]

my forwarded port is 200, but 200 isnt listening, its state is SYN_SENT and ESTABLISHED ?!
What shall I do now?

Thanks in Advance.

xVulnerable - July 24, 2014, 12:39 am

Recently I've been spreading quite a bit. I get 10-20 new slaves daily (very specific in who I try to get as slaves), the problem is every time I disconnect from my VPN and go to bed when I check my installs again the next day they're all gone. And they don't ever seem to be reconnecting. My server

is still FUD, and when I run it in a VM it's still working. And I'm still getting installs throughout the day. Is it the instability of DarkComet? Perhaps my crypter?

xVulnerable - July 28, 2014, 12:30 am

Is it the instability of DarkComet? Perhaps my crypter? Do they all disappear or most of them? If you're not seeing any it might be your setup. Maybe you're not listening to your port.

If not, the reason is due to bot stability. RATs are not ment to hold bots for a long time since they have a lot of features, so you may just lose a bot just because the RAT is unstable, especially Darkcomet. So there's nothing you can do to fix this except getting a more stable RAT. If you have VIP bots i recommend keeping a copy of the slave on a secodary RAT.

Seer - July 28, 2014, 12:39 am

It's definitely not the port, every time I open DC I instantly listen to the port that I use. It's literally every install that I get, they connect and everything is great until I leave my computer for 8-12 hours. I just tested disconnecting/reconnecting from my VPN after I had received a new install and it was still there, it seems just after an "extended" period that they disappear.

I'm probably just going to purchase a RAT, I'm sick of DarkComet anyway. The keylogger is shit, and so are all the "spying" functions. Hopefully this solves my problem, I didn't think a RAT could be so unstable.

xVulnerable - July 28, 2014, 12:46 am

143 will suite all your needs. <http://143vpn.com/>

TheGreenGoblin - July 29, 2014, 1:38 am

How do I get the builder for the program njrat to work on other computers? I can only RAT the computer that is actually running the njrat program (using vpn), but when i test it on a laptop (my real ip) I dont see it detected from the njrat program.

I tried xRAT and i get the same results with the port 127.0.0.1 and I only can see the host computer's name

So this has to be a port problem

xVulnerable - July 29, 2014, 2:18 am

You need to put your IP/DNS instead of 127.0.0.1 to be able to infect computers outside your network.

TheGreenGoblin - July 29, 2014, 2:59 am

(Jul 29, 2014 02:18 AM)xVulnerable Wrote: [\[CITE\]](#) You need to put your IP/DNS instead of 127.0.0.1 to be able to infect computers outside your network.

When i use my no-ip dns as the server, my host computer can no longer RAT itself.

Im sure a port is open because i just manually opened one with an ubee router (built in wireless/ethernet). Is an open port problem the reason for this? Or maybe i didn't configure the no ip dns properly

xVulnerable - July 29, 2014, 3:31 am

Is your port open on www.canyouseeme.org?

TheGreenGoblin - July 29, 2014, 4:02 am

(Jul 29, 2014 03:31 AM)xVulnerable Wrote: [\[CITE\]](#) Is your port open on www.canyouseeme.org?

I was unable to get an open port with my router, so i used the one listed from Utorrent and it works (i assume because my rat works from a proxy computer)

Do you have a recommended Free VPN service for using RAT or should i be fine using my home connection?

Thanks for your time

Noobching1990 - July 29, 2014, 4:38 am

Sry for the bad english, I will try my best to explain my situation.

I have some problems with RAT. I created the RAT server with darkcomet, then i used celesty binder to bind the server with other exe (like games). Finally, I used lacrypt5 to encrypt entire file(RAT server+games file). Actually, This way is work to infect my second computer(different WAN) and the majyx scanner results 7/35 for my server.

My question is: Is it the best way to encrypt entire file rather than only encrypt the server first and bind it to other file?

Apart from this, I am planning to buy a VPN to hide my IP address and a crypter(the free crypter can only provide around 7-8/35 results, I want a paid crypter can provide fud). Does anyone can give me some suggestions about this?

xVulnerable - July 29, 2014, 4:59 am

It is best to purchase a paid crypter for best results. Most have a binder inbuilt. I don't know any good crypter, most are not even FUD.

(Jul 29, 2014 04:02 AM)TheGreenGoblin Wrote: [\[CITE\]](#) I was unable to get an open port with my router, so i used the one listed from Utorrent and it works (i assume because my rat works from a proxy computer)

Hello Sir, whats the best crypter langu.. using for Nanocore!

and can u maybe help me to make 1file fud !?

and i have vbs worm, i need transfer bots from worm to Nanocore.

its called: " input ur direct link "

then: file name " what i write on file name " EXE NAME or " !?

ps; i need any good direct link hosting for exe.

ty.

cheers

The language does not matter, make sure the crypter works with nanocore with the crypter owner.
You need to be able to control your worm remotely to transfer bots.

For direct link, use <http://directxex.net/>

kenwhite23 - July 29, 2014, 10:24 am

thank you very much sir, i have from 200 bots only 40 transfer :/
crypter not still fud, or i thino Nanocore have some bugs!

its maybe possible you crypt my servcer 1file pls.

sincerly. Kevin

AlphaTengo - July 29, 2014, 10:45 am

Its that bug or what ever !?You will be better off asking that to Nanocore support.

Remo - July 29, 2014, 6:58 pm

Hey im new to ratting so I have a bunch of noob questions. Do I need to run a VM while ratting? I saw it was #1 on your The Brotherhood | How To Stay Anonymous While RATting post but also saw a lot of people on here claiming you do not need one. Is the VM just for making sure you dont get infected yourself or does it help with not getting caught? Virtualbox a good one? Thanks for the help

xVulnerable - July 30, 2014, 2:00 am

Having all your ratting activities trapped in a box is always safer but it's not necessary.

pauliux963 - July 31, 2014, 4:58 am

Hey, xVulnerable, I have a problem with my [censored] VPN. Soo, ports are forwarded, DNS updated, no firewall. But still I cannot connect to anybody. Tried to infect myself in VMware, Sandbox, but still doesnt work. Can you help me?

xVulnerable - July 31, 2014, 5:00 am

I don't know any. To scan .jar files simply zip them.

twollybangin - July 31, 2014, 10:09 am

How come when i try to connect to someone with jspy, I always lose the connection. I have no problems at all with port forwarding or my domains but after a certain time i lose connections. The stub shows up in task manager for my client and it works for a short while but then it stops and when i try to load up camera it doesn't work anymore and likewise with the screen. Also i have another connection but it just says when i update listening to port; "[server] Removed session: xxx.xxx.xxx.xxx. Why ?

Pumpkins - July 31, 2014, 1:57 pm

Your client has his computer probably turned off hence not being able to connect.

degado - July 31, 2014, 3:23 pm

(Jul 29, 2014 04:59 AM)xVulnerable Wrote: [\[CITE\]](#) It is best to purchase a paid crypter for best results. Most have a binder inbuilt. I don't know any good crypter, most are not even FUD.

You should be fine using your home connection. I agree height vb crypters and rats I like netwire but is expensive did you try a prototype is it good? bs was good but is down and everybody trust bs but is down so I think it could happen to any rat.

Erasinite - July 31, 2014, 4:01 pm

On jSpy, the port 3175 is open and I've tested on the jar file and the jar on here. Both of which are using windows. What am I meant to do?

xVulnerable - August 1, 2014, 2:11 am

Hey sir short question,

Do you know how to add USB Spread to a RAT?

xVulnerable - August 4, 2014, 8:00 pm

(Aug 4, 2014 07:51 PM)CriticalMatt's Wrote: [\[CITE\]](#) Hey sir short question,

Do you know how to add USB Spread to a RAT?

USB autorun infections are ancient, they have been patched on Vista +.

mrpapshmeer - August 4, 2014, 8:41 pm

Does it make a difference if you put "http://[your.ip/dns] [port]" OR does it half to be "[your.ip/dns] [port]"

Thank you in advance for taking time to help.

xVulnerable - August 4, 2014, 8:47 pm

(Aug 4, 2014 08:41 PM)mrpapshmeer Wrote: [\[CITE\]](#) Does it make a difference if you put "http://[your.ip/dns] [port]" OR does it half to be "[your.ip/dns] [port]"

Thank you in advance for taking time to help.

Your RAT is not going to connect to any websites so the http:// is not needed.

Unauthenticated - August 4, 2014, 10:12 pm

Isn't there a new USB spread that makes the USB an .ink file?

So you mean there's no working USB spread on Vista+?

xVulnerable - August 5, 2014, 4:18 am

(Aug 4, 2014 10:12 PM)CriticalMatt wrote: [\[CITE\]](#) Isn't there a new USB spread that makes the USB an .ink file?

Thanks. It's been a Brotherhood help desk for so long, shame to take it away at the end.

DOXEDLoI - August 8, 2014, 8:04 pm

I've had jSpy for days, and I know I'm not l33t yet but may I really have a test install or can you check my setup for jSpy if you can't do that because I'm not l33t?

mrpapshmeer - August 9, 2014, 12:11 pm

Do you know which file binders can be used for Darkcomet without it corrupting the file?

xVulnerable - August 9, 2014, 12:12 pm

(Aug 9, 2014 12:11 PM)mrpapshmeer Wrote: [\[CITE\]](#) Do you know which file binders can be used for Darkcomet without it corrupting the file?

Darkcomet has it's own binder if i remember correctly.

Blue Sapphire - August 9, 2014, 1:20 pm

What rat would you recommend to purchase, and what crypter works with it?

xVulnerable - August 9, 2014, 1:23 pm

(Aug 9, 2014 01:20 PM)#Dutch Wrote: [\[CITE\]](#) What rat would you recommend to purchase, and what crypter works with it?

I recommend purchasing jSpy. It is 100% FUD and does not need any crypting.

Ainubluez - August 9, 2014, 1:25 pm

I have seen that some rat can be reversed. Does JSpy have this function?

And which VPN works best with it ? (And is the most secure)

Blue Sapphire - August 9, 2014, 1:56 pm

(Aug 9, 2014 01:23 PM)xVulnerable Wrote: [\[CITE\]](#) I recommend purchasing jSpy. It is 100% FUD and does not need any crypting.

Thanks for the fast reply, i was thinking about buying it, but is there something like a stealer plugin right now? and where can i see what plugins are available or do i have to write them myself?

xVulnerable - August 9, 2014, 5:30 pm

(Aug 9, 2014 01:56 PM)#Dutch Wrote: [\[CITE\]](#) Thanks for the fast reply, i was thinking about buying it, but is there something like a stealer plugin right now? and where can i see what plugins are available or do i have to write them myself?

We don't have a stealer right now but you can gather any information from the keylogger function easily.

Most plugins are included with jSpy automatically.

(Aug 9, 2014 01:25 PM)Ainubluez Wrote: [\[CITE\]](#) I have seen that some rat can be reversed. Does JSpy have this function?

xlosmuertosx - August 11, 2014, 3:56 am

RAT client: dark comet v5.3

I have followed all the instructions but still idk it doesnt work. The problem i think is when i add noip to darkcomet, it says cant join remote server please try again later. Another problem is when i go and try to listen to my port in canyouseemee it says connection timed out. Help will be appreciated

xDave - August 11, 2014, 4:44 am

So, yesterday I finally managed to portforward but today I started up my pc and my port has been closed suddenly (I don't know how that happend) and when I restart my internet my slaves pop up for about 10 seconds and then dissapear again.

Anyone can help me out? :|

xVulnerable - August 11, 2014, 7:14 am

That means your ports aren't open.

Well if your ports are closed your LAN ip probably changed, portforward again and use the right ip.

xDave - August 11, 2014, 7:34 am

Well if your ports are closed your LAN ip probably changed, portforward again and use the right ip. I'm not on LAN internet, am I still able to portforward and use my rat?

xVulnerable - August 11, 2014, 7:39 am

(Aug 11, 2014 07:34 AM)xDave Wrote: [\[CITE\]](#) I'm not on LAN internet, am I still able to portforward and use my rat?

Yes but when you portforward you need to enter your ipv4 address. That has most likely changed.

xVulnerable - August 13, 2014, 8:04 am

Currently online & helping, feel free to post.

Khamul - August 13, 2014, 8:10 am

Is there any good free file hosting that doesn't let chrome detect my FUD rat as a virus?

xVulnerable - August 13, 2014, 8:11 am

(Aug 13, 2014 08:10 AM)chertycherty Wrote: [\[CITE\]](#) Is there any good free file hosting that doesn't let chrome detect my FUD rat as a virus?

All free file hosting websites are saturated. Having your own website/host would be the best.

token token - August 13, 2014, 8:13 am

Hey I've got some problems with my dark comet. I've installed it through on a virtual machine through and vpn and according to canyouseeme, the port is open so it should work just fine. But no matter how often I post my link on the internet, I haven't got a single slave so far, so I am not sure If i am just unlucky or if something is not working correctly. Help like a test install would be very appreciated and I am happy to pay for help if there's a major problem that needs to be solved.

Make sure it's actually working first before spreading. And is it even FUD crypted?

token token - August 13, 2014, 8:44 am

(Aug 13, 2014 08:20 AM)xVulnerable Wrote: [\[CITE\]](#) Make sure it's actually working first before spreading. And is it even FUD crypted?

No it's actually not crypted yet since I didnt want to put much effort in this before knowing if it actually works properly. I tried it on a computer and it worked but since I uploaded it I got zero response. I just wanna know if it's working ?

xVulnerable - August 13, 2014, 8:53 am

Install a VMware and test it. After confirming it is working buy a decent crypter.

(Aug 13, 2014 08:55 AM)token token Wrote: [\[CITE\]](#) Thanks :) Any suggestions what to buy? Sorry I am pretty new to all of this.

I don't recommend any crypters since it's very difficult to actually find a FUD one and they get

detected very fast. I recommend you buying jSpy because it's 100% FUD for months and you don't need to buy any crypters.

token token - August 13, 2014, 9:39 am

(Aug 14, 2014 04:34 PM)xVulnerable Wrote: [\[CITE\]](#) Which features are you talking about and what is the problem?

The download and execute function and the update through url function are not working. And in the cmd, it seems that it is isolating the commands, if I type a chain of commands they don't work properly.

xVulnerable - August 15, 2014, 9:28 am

(Aug 15, 2014 03:10 AM)nys0 Wrote: [\[CITE\]](#) The download and execute function and the update through url function are not working. And in the cmd, it seems that it is isolating the commands, if I type a chain of commands they don't work properly.

The features are working fine. Are you sure you're using a direct link? (must end in .exe/.jar)

And what site are you using? It could be being blocked by security software.

Getting seeds does not mean they actually downloaded your server. And it needs to be FUD.

TheRealSlimShady - August 16, 2014, 9:43 pm

vouch, tested my server and everything.
thanks

There's no crypting procedure. You need to buy a crypter, a FUD one but that's that very hard. Even if you find a FUD crypter you will still get detected by a few on runtime + it will get detected again in a day or two.

I recommend purchasing jSpy, it's a great java RAT and it has been FUD since release.

Shacxify - August 17, 2014, 4:00 pm

I wanna a nice RAT. I'm thinking about jSpy, How is it? Are there any other RATs better than jSpy?

Oliver Sykes - August 17, 2014, 4:05 pm

(Aug 17, 2014 04:00 PM)Shacxify Wrote: [\[CITE\]](#) I wanna a nice RAT. I'm thinking about jSpy, How is it? Are there any other RATs better than jSpy?

Well, it's probably between Nanocore and jSpy. jSpy's main advantage- Java stub, which means you can get bots in all OSs. It also means you have no need to crypt.

xVulnerable - August 17, 2014, 4:05 pm

(Aug 17, 2014 04:00 PM)Shacxify Wrote: [\[CITE\]](#) I wanna a nice RAT. I'm thinking about jSpy, How is it? Are there any other RATs better than jSpy?

jSpy is pretty stable, not to mention it's 100% FUD so you don't need to waste extra money on crypters.

Oliver Sykes - August 17, 2014, 4:06 pm

Damnit, I keep stealing your thread -.-

Dr Greenspoon - August 17, 2014, 4:11 pm

hey i buyd your jspy
and i open the port 3175
and i check in the site the port is open
but i dont see bots connects.
only my pc connect i see
