Thread: [\[C#/VB\] Advanced Codedom Crypter Source](#)

Reaper91 - August 25, 2013, 10:39 am

Hey everyone, just thought I'd share my crypter source with everyone so you guys can learn from it. It uses a lot of features that typically make up a FUD crypter you'd see for sale here on these forums. It's been awhile since anyone around here has seen a pure codedom crypter worth it's salt so I hope everyone can learn a lot from this source! The code is a little unclean as well but it works. Also, be sure to at least post a thanks on this thread!

Features

- Codedom (Stub Options are in a DLL)-
- Basic .Net exe Support-
- Compression-
- Innovative Bitmap Resource Storage (Credits to 0xDeadDead)-
- Dual File Binder-
- Fake Error-
- Custom Startup/Install (Key and Path)-
- Hidden Startup (Credits to Bansky)-
- Hide Executed File-
- 32/64 Bit RunPE (Credits to Affixiate)-
- Drop File/Inject (Custom Drop Path/Custom Injections)-
- Assembly Randomizer/Cloner-
- Icon Changer (Use HQ Icon for less Detections)-

And that's all the features, enjoy this source everyone, download link below!

Thanks a lot for the share, I will try to learn from this. Thanks a lot

Reaper91 - October 3, 2013, 10:24 am

I took the links down for a reason! Stop asking me for the crypter source people!

WarpBrothers - October 3, 2013, 10:53 am

I will check this out! Thank you for the share!

croccy - October 3, 2013, 3:49 pm

File removed :(
