Thread: [If you teach people, teach me!](#)

Tako Pidgy - August 27, 2013, 10:35 am

Hello! I want to become an hacker, but i have no knowledge and i have already searched on this forum. Nothing helps. I have my antivirus always poping up; people easily have my ip, its not hidden, and i dont know how to hack. If someone can help me, i beg you. And if you want to be payed for teaching me, i dont have paypal, so it has to be with paysafe!

TheArtfulDodger - August 27, 2013, 10:45 am

I'm new here too and have already learnt some things. All you have to do is read. Or use the search function for something you might be interested in, always a good place to start.

Rayquaza™ - August 27, 2013, 10:46 am

Read some tutorials and learn how to stay Anonymous over the internet, to learn real hacking you'd have to put years of effort in.

Y0ix - August 27, 2013, 10:46 am

Lol one thing people don't spoonfed you

xQQ - August 27, 2013, 10:47 am

If you have no knowledge on hacking, just read some tutorials. They will give you basic ideas on how stuff works. If you have no knowledge on computers/networks in general, you got to learn this first.

Artisanal - August 27, 2013, 10:51 am

What kind of Hacking are you looking to do ?

Tako Pidgy - August 27, 2013, 10:57 am

RAT, hack servers, crack passwords, or other stuff.

Artisanal - August 27, 2013, 10:59 am

Zapu - August 27, 2013, 11:16 am

Read books, read .PDF's online, look into a programming language.

Just read.

TheArtfulDodger - August 27, 2013, 11:40 am

Wondering if the name is a play on words for "take pity"?

Tako Pidgy - August 28, 2013, 12:26 am

Hell no it isn't. It s not my name. Curly Pidgy

Diablosito33 - August 28, 2013, 1:12 am

I'm new here,
can someone advice me a tutorial about language to make bots...
or hacks...
Or some "teacher" to follow in youtube, website...
I aprociate your advices...

xQQ - August 28, 2013, 2:03 am

I aprociate your advices...For all kinds of malware a machine-oriented language (like C) is
suggested. Pick one <http://amzn.to/15iEtle>

PLxM - August 28, 2013, 2:11 am

Hacking is a range of things.
From keyloggers etc, internet security, etc So you need to actually say what you want to hack and
work on that area.

Probably because this thread is from 2013 and almost everyone here is closed.

Hey Future hacks,

What are you interested in learning? Malwares?

If so I wouldn't really bother with RATs. You are so much better going the route to building a custom
meterpeter and using veil-evasion to avoid anti-virus. It gives you significantly greater control than
what a RAT does.

BTW building a custom meterpeter, encrypted with veil-evasion is easy peasy and does not even
need any programming knowledge. Every tool required for it (a) A Linux Operating System (b)
Metasploit framework and © Veil Evasion are all free. Won't cost you a dime.

Would you like me to explain how it's done? Because rather than literally handing you all the step
its HIGHLY recommended that you do your research. If you get stuck trust me I can guide you step
by step; and no I am not looking for any kind of payment or anything

redlightrouter - October 30, 2016, 2:09 pm

Man, I got fooled again. Good thing that Faith is here to point out this was grave digged.

biboman2 - November 1, 2016, 7:29 am

First learn coding and then we can talk :P lol jking, I mean C++(Hard) and python(Easy) are very
good languages to learn as a beginner.

22gotya - November 1, 2016, 10:14 am

This redundant "hacking" term is very ambiguous lately. What SPECIFICALLY are you interested in learning? From what I can gather from your post OP. You should begin with the basics, such as computer/hardware knowledge. As well as basic network knowledge such as TCP/IP. Cybrary.it has great resources available for these things.

Pingout - November 1, 2016, 10:16 am

2013 thread

damn broskii

22gotya - November 1, 2016, 10:17 am

Oh wow, I should of actually looked at the original date. I noticed it in the recent posts column. Truthfully, just an oversight on my part. Didn't realize I was gravedigging. SORRY.

aaravbest - December 9, 2016, 12:59 am

i am interested in keyloggers and hacking people phone,as of now just a beginner.one question is it necessary to learn programming language to learn hacking?

Asdethprime - December 9, 2016, 3:47 am

Beyond being able to hack the most obvious targets that already have a pre-written exploits you won't need programming language.

However for anything a bit advance you need one because essentially you take a proof of concept on how to exploit a system that you can find on exploit databases and convert that into an actual working exploit. For this you need programming.

Programming is not a be all and end all when it comes to hacking, but beyond the most rudimentary hacks you would need programming language.

Eventually, if you progress beyond that and start figuring out vulnerabilities on system on your own (when you really become a hacker of worth, sadly I personally am not there yet still trying my best hehe) you would need to learn debugging and assembly language.

kookur - December 9, 2016, 3:59 am

You can add me on skype for any kind of help

.

semendaemon - December 9, 2016, 3:59 am

Finding "mentors" or "teachers" is easy. Being a good student is infinitely harder.
