RS Botting Auth Stealer

[img]http://img188.imageshack.us/img188/6464/guiv2.jpg[/img]

So, how does this work?

Once you have built your .Exe to spread to victims and the victim has clicked on the .Exe, the .Exe will appear to do nothing. However, the program is actually checking every .1 of a second for the 'Security Question' interface, once it is active - it will be shutdown and replaced with this almost identical window:

Spoiler ([Click to View](#)) [img]http://img190.imageshack.us/img190/9695/questionm.jpg[/img]

What next?

Once the user has entered their 'Security Answer' and clicked 'Continue', the program will search for all entries in their computer for 'data.db' (the file that holds auth information and account information). When found, it will be sent as an attachment to your E-Mail address and the Security Answer in the E-Mails body, you can then replace that 'data.db' file in the botclient on your computer to view their auths, not only their auths but also their RUNESCAPE ACCOUNTS!

Finalizing...

After sending it will delete their data.db so they lose their auths and you won't get banned for using them :D. It will also remove the application from startup to stop it from spamming your inbox, so it will only send the data.db once from each user.

Example of E-Mail:

Kill On Site

[img]http://img696.imageshack.us/img696/856/killonsite.png[/img]

This application is pretty self explanatory, but to sum it up: It allows you to create an .EXE that you can bind to your virus, botnet, server whatever. It will then block Websites using the HOSTS file method and also close down any windows containing keywords that you enter. For example: "Regedit" - This would stop them removing your virus from startup.

MSN > E-Mail List Converter

[img]http://img3.imageshack.us/img3/460/ctttotxt.png[/img]

It will convert exported MSN contacts into an E-Mail list (.txt), for example:

Contacts for korrupt (hotmail).ctt:

PHP Code

```
<?xml version="1.0"?>
```

```
<messenger>
```

```
  <service name=".NET Messenger Service">
```

```
    <contactlist>
```

```
      <contact type="1">HackForumsUser@hotmail.com</contact>
```

```
<contact type="1">HackForumsUser1@hotmail.com</contact>
```

```
<contact type="1">HackForumsUser2@hotmail.com</contact>
```

```
<contact type="1">HackForumsUser3@hotmail.com</contact>
```

```
<contact type="1">HackForumsUser4@hotmail.com</contact>
```

```
    </contactlist>
```

```
  </service>
```

```
</messenger>
```

This will then be converted to...

My_MSN_List.txt:

PHP Code

```
<?php
```

```
HackForumsUser1@hotmail.com
```

```
HackForumsUser2@hotmail.com
```

```
HackForumsUser3@hotmail.com
```

```
HackForumsUser4@hotmail.com
```

[color=#00BFFF]This is useful for gaining large amounts of E-Mails/MSN's that are active. If you have hacked someone's MSN you can logon, export their contacts and convert them into an E-Mail list instantly with my application ?.

How to get the MSN .ctt File:

1. Open MSN and Sign In on the account you wish to get the E-Mail List/Contact List from.
2. Click 'Contacts' at the top of MSN (Press ALT if you cannot see this at the top) and select 'Save instant messaging contacts...'.
3. Select where you want to save the .CTT file and click save, DONE!

Steam stealer is legit?

or... not?

connzy - October 8, 2010, 6:38 pm

i really do love you created an account just to tell you this and, that this maybe my new place instead of fkn

devnull - October 8, 2010, 6:39 pm

this looks legit im gunna try it out shortly

iphonejuul - February 5, 2011, 2:36 pm

does any of these work?

I want the auth stealer

pkmadness - February 15, 2011, 1:03 pm

Could you re-upload the videos some where els?

-Thanks

FearMe? - February 15, 2011, 3:06 pm

So are these legit or not?
