Thread: [Arcaneyon's PewView ALPHA - Website Traffic/YouTube Video Views Booster \[MediaFire\]](#)

Decim - August 28, 2013, 6:18 am

About:

Arcaneyon's PewView is a free application that I've developed which can be used to increase your website traffic as well as boost the views on your video.

I coded this for my private use but then I thought, what the heck. ?

How does it work?

It sends spoofed webrequests to the target address.

It's currently in ALPHA.

The number of times you add the website/video will be the number of views you will get. I haven't yet added an easier way.

Example usage: Add your video a thousand times, press Start and leave it minimized (it will automatically be minimized to tray).

Don't complain about not getting any views, you might have to wait a couple of hours for YouTube/Website to update the stats.

You have the option to supply your own proxy list or download from my online database with just one click.

Screenshot:

There WILL be bugs present as this is the ALPHA release. Do NOT flame, simply post them here and I will try to fix them when I can.

Links:

MediaFire: http://www.mediafire.com/download/bdk37m2iaca26r2/Arcaneyon's_PewView.exe

Virus Scan: [VirusTotal](#).

NOTE: There will be future updates but as I will not be able to edit this thread 24 hours from now, I recommend you guys to bookmark my blog: <http://www.hoodedjustice.me/>

Going to bed now, will check this thread tomorrow.

duffmanohyeah - August 28, 2013, 6:25 am

thats cool!! i will try and test it with recommend:)

Thx for it!

edit1/ im not getting anyviews... i get the message that the boosting is done but in the console all connections failed... is that normal?

edit1/ im not getting anyviews... i get the message that the boosting is done but in the console all connections failed... is that normal?No, it's not normal. This could mean one of the things below.
The link is broken. Make sure you add http before your address.
The proxies couldn't be validated.
There was a problem with your internet connection.

Knick0241 - August 28, 2013, 10:24 am

According to his rep I guess it is not infected

duffmanohyeahr - August 28, 2013, 12:55 pm

its not infected... it works fine thx :) got the problem now... not working proxys!!! works well thx for it!!!

You're welcome! I'm glad you got the problem sorted.

Dr41DeY - August 29, 2013, 2:27 am

Thanks, for posting! :D
I am gonna check this out :^).

I am gonna check this out :^).Great, hope to hear your thoughts on it soon.
EDIT: I've updated my db of proxies with a massive set of High +KA proxies.
If you get an error when you press "Download Proxies", just close the app and open it up again.

ThebigKing - August 29, 2013, 8:02 am

thaanxxx very much bro ive been looking for a tool like this for a long time i needed it so badly thank you

Decim - August 30, 2013, 9:00 am

Updated to ALPHA v2.

Changes:

Code 1. Added multiple threads: You can now add views to more than one website/video at a time by selecting the number of threads you want to run.
2. Added a looping option: You can now set the number of views you desire (max. 500 per thread).
3. Added a lightweight auto-updater.
4. Added three sets of proxies.
5. Added an option for the user to set the timeout period (recommended 5000).
6. Slight modifications to the GUI.

komas - August 30, 2013, 8:12 pm

the download proxies feature is not working for me, i get an error when i click the download proxies button.

designed - August 30, 2013, 8:15 pm

this seems really cool! i just started a website and can't wait to see if it increases traffic. thanks!

I'm pretty sure that you're using the ALPHA v1. ALPHA v2 with a lot more features is out. Check my previous post.

Yui Hirasawa - August 30, 2013, 9:20 pm

Looks magnificent!

I wish you the best of luck with the development of this, it could go a long way.

Lines - August 30, 2013, 9:49 pm

Program looks amazing! I would love to use this, but just one question.. What sites could I use this for, to get money or something out of the views?

Will this work with Ad.Fly ?

Talu - August 31, 2013, 2:09 am

This looks fantastic! I'm gonna try it out...thanks for sharing

duffmanohyeahr - August 31, 2013, 7:36 am

the new version is much more full with awesomeness than the version before lol thx for it :D hope u will make more updates!!! really awesome :)

Will this work with Ad.Fly ?The views you get are completely monetizable as they're legit and not mobile views.

As for AdFly, I doubt it would work as it does not wait for 5 seconds.

(Aug 31, 2013 02:09 AM)hackingmanguy234 Wrote: [\[CITE\]](#) This looks fantastic! I'm gonna try it out...thanks for sharingYou're welcome.

As long as I have the support of my users, I don't intend on stopping.

I'll just say it again;

THESE VIEWS ARE MONETIZABLE SINCE THEY ARE NOT MOBILE VIEWS.

Decim - September 9, 2013, 8:09 am

Updated the proxies again, they should be a lot faster now.

GoldenDragonPC - September 9, 2013, 8:49 am

I get "Connection Failed." every time I start booting. I tried using both versions and 4 different proxy lists. It also says there is new version and I'm using newest (I think? V2, can't find anything newer on your website.

Sometimes when I press reset proxies start changing very fast and every time fields above "Enter URL and press Enter." becomes empty.

duffmanohyeah - September 9, 2013, 12:43 pm

same for me now... always getting connection failed o.O

CreepyPasta - September 9, 2013, 4:00 pm

Hmm. I wonder what inspired you...?

Was it... PewDiePie?

LOL. Good share, OP :)

Looks like a decent coded program.
