If anyone could decrypt this hash it would be much appreciated, it is SHA1, no salt.

Kerberos - August 29, 2013, 10:17 am

damn, my ssh link to my home computer is down. No bruteforcing for me today :(h4shcr4ck should be able to get it for ya

Sir Paul McCartney - August 29, 2013, 1:58 pm

Is anyone able to do this? I don't have much room on my laptop left to really download a huge wordlist, I would REALLY appreciate it if someone could do this :)

The hashing algorithm doesn't make it any easier to crack if it is a complex password. If they use upper/lower alpha symbols + numbers and have 8+ characters.. chances are nobody is cracking it
