Thread: [\[HELP\] Shell Vbulletin 4.x.x](#)

?Victory - August 30, 2013, 7:17 am

Hey guys,

I am looking for a way to shell VB v4 and up. can anyone help me out ?

HaxOr? - August 30, 2013, 7:41 am

Yup, if you have admin info i can shell it. :)

PM me.

PM me.

I am not asking for someone to Shell me a Vbulletin, I am Asking to know how to shell a vbulletin.

misterFox - August 30, 2013, 9:31 am

I am very interested in how you (HaxOr) are able to shell any of 4.x.x versions of vbulletin. If you are really able to do that, that would be quite incredible. (Private exploit?)

If you care to share (dreams), I'd be grateful.

Ahahaha.

does it feel shit being a skid ?

Shelling a forum. means you already hacked it and you need to upload a shell.php from admin CP.

Never felt like one. Do you know what 'skid' means?

Let me redirect you: http://en.wikipedia.org/wiki/Script_kiddie

And incase you forgot how to find information, here's the quote:

Quote:are unskilled individuals who use scripts or programs developed by others to attack computer systems and networks and deface websites

Just to make sure you don't take it out of context, here's the bolded info:

Quote:who use scripts or programs developed by others

Quote:Shelling a forum. means you already hacked it and you need to upload a shell.php from admin CP. Good to know, then.
