Thread: [Dedicated Server Allow Spoof Post Url](#)

BlackLayer - August 30, 2013, 5:55 pm

Good - server are allowed spoof...

Medium - long year ago was allowed spoof but now don't know allowed or closed...

Closed - server don't allowed spoof...

Good - <https://www.ubiquityservers.com/>

Good - <http://www.serverhub.com/>

Good - <http://www.servermania.com/>

Good - <https://www.privatelayer.com/>

Medium - <http://www.rapidswitch.com/>

Medium - <http://www.server4you.net/>

Medium - <http://iweb.com/>

Closed - <http://www.serverloft.eu/>

Closed - <http://www.us.unmetered.com/>

Closed - <http://ecatel.net/>

Please, you should be new post link about server spoof.

John429 - August 30, 2013, 6:39 pm

Good - <http://ecatel.net/>

Medium - <http://www.1000mbps.com/>

Not sure why you say Ecatel has egress filtering, the work fine for me... pretty sure 1000Mbps fucked over a bunch of people when they enabled egress filtering.

BlackLayer - August 30, 2013, 7:41 pm

Not sure why you say Ecatel has egress filtering, the work fine for me... pretty sure 1000Mbps fucked over a bunch of people when they enabled egress filtering.

ecatel.net closed spoof! thanks for post

ItsFluffy - August 30, 2013, 8:21 pm

this is amazing post if these hosts are in fact all allowing spoof but how do you know 100% that they do? Have you personally tested as of recent?

also, can u plz comment on whether the vps and dedi's allow spoofs or just dedi's per host it would be very much appreciated thanks

BlackLayer - August 30, 2013, 8:40 pm

(Aug 30, 2013 08:21 PM)ItsFluffy Wrote: [\[CITE\]](#) this is amazing post if these hosts are in fact all allowing spoof but how do you know 100% that they do? Have you personally tested as of recent?

I was proved just dedicated server allowed spoof ? you are welcome

ItsFluffy - August 30, 2013, 8:51 pm

ok cool

many of these hosts are considerably expensive

Mountain Dew - August 30, 2013, 8:54 pm

I also sell dedi's that allow spoofing, mine happen to be MY servers in MY rack.

ItsFluffy - August 30, 2013, 8:56 pm

(Aug 30, 2013 08:54 PM)Mountain Dew Wrote: [\[CITE\]](#) I also sell dedi's that allow spoofing, mine happen to be MY servers in MY rack.

u mean from rackspace? or u mean colocation or what?

Casual - August 30, 2013, 8:56 pm

(Aug 30, 2013 08:54 PM)Mountain Dew Wrote: [\[CITE\]](#) I also sell dedi's that allow spoofing, mine happen to be MY servers in MY rack.

Not too hard to colocate ?

I have quite a few servers colocated In various centers. Would not allow anyone else to touch them though.

Way cheaper In the long run which Is why I colocate.

John429 - August 30, 2013, 9:21 pm

(Aug 30, 2013 07:41 PM)????????||?????| Wrote: [\[CITE\]](#) ecatel.net closed spoof! thanks for post I have a few servers with them and just helped someone set one up yesterday... Ecatel still allows spoofing.

Yes, CyberBunker does spoof. ??

ItsFluffy - August 31, 2013, 3:39 pm

(Aug 31, 2013 11:24 AM)PandaVenom Wrote: [\[CITE\]](#) Yes, CyberBunker does spoof. ??i thought they were more for botnets than actual dos'ing from the servers... from what ive read in this section...

PandaVenom - August 31, 2013, 4:15 pm

(Aug 31, 2013 03:39 PM)ItsFluffy Wrote: [\[CITE\]](#) i thought they were more for botnets than actual dos'ing from the servers... from what ive read in this section...They are just fully for everything. You can host anything you want on them without worrying about DCMA or anything and also they spoof and don't care if you DDoS from them.

ItsFluffy - August 31, 2013, 5:01 pm

(Aug 31, 2013 04:15 PM)PandaVenom Wrote: [\[CITE\]](#) They are just fully for everything. You can host anything you want on them without worrying about DCMA or anything and also they spoof and don't care if you DDoS from them.

tyvm for posting that reply i will check into their prices now

it would seem cyberbunker doesn't simply sell dedi server or vps but rather full on rack ownership at quite the hefty price

PandaVenom - August 31, 2013, 5:43 pm

(Aug 31, 2013 05:01 PM)ItsFluffy Wrote: [\[CITE\]](#) tyvm for posting that reply i will check into their prices now

it would seem cyberbunker doesn't simply sell dedi server or vps but rather full on rack ownership at quite the hefty priceYou have to colocate with them, I wish that they did sell Dedicated servers, that would have been the best;however, they don't. Still a really good deal :)

ItsFluffy - August 31, 2013, 6:24 pm

yeah its a good deal but im hoping to find some reliable hosting for now is all

Matak - August 31, 2013, 8:06 pm

These guy's allow spoofing also on their Dedis, not sure about their VPSs:

<http://www.server4you.com/>

Also, i was using a shitty AMP list on this, because i was setting it up for someone and tested it with a old list.

You have to pay a \$100 set up fee though, but they will let you tack it on to you're monthly payment.

Spoofable VPSs: <http://www.xeneurope.com/packages> <- You blow through the bandwidth though :/

Once again, this was just a test to make sure the API was outputting the commands to the server, and i was using the same DNS list.

ItsFluffy - August 31, 2013, 8:23 pm

yea the issue with server4you is their setup price is outrageous man; that's we didn't go with them remember?

and any server with low bandwidth isn't much worth having

just commenting

Matak - August 31, 2013, 8:26 pm

(Aug 31, 2013 08:23 PM)ItsFluffy Wrote: [\[CITE\]](#) yea the issue with server4you is their setup price is outrageous man; that's we didn't go with them remember?
and any server with low bandwidth isn't much worth having
just commenting100% Agreed. The only thing about server4you, was that they offered to tack on \$5 a month, instead of paying the 1 time payment of \$100.
But still that shit was retarded lol;
As for the VPS, i also 100% Agree, if you do the math you have about 200 seconds before you're out of bandwidth.

SpheX™ - August 31, 2013, 8:31 pm

Some people do not allow

BlackLayer - August 31, 2013, 8:32 pm

server4you.net > ISP: Intergenica AG = allowed spoof
other datacenter

server4you.net > ISP: Hosting Solutions International = closed spoof

few months ago i bought 6 server won't work spoof.shit DC "Hosting Solutions International"

(Aug 31, 2013 08:31 PM)Chop Stick Wrote: [\[CITE\]](#)

Some people do not allow

Yes allowed spoof, mind sales chat ?

but it is expensive

Matak - August 31, 2013, 8:36 pm

(Aug 31, 2013 08:31 PM)Chop Stick Wrote: [\[CITE\]](#)

Some people do not allowYeah, Sometimes live support is retarded and don't know what there talking about, though. But i would take their word for it.

It would be nice to see vouches or proof, like what i provided on my post from each provider. Other wise i would be pulling #Unauthorized with four payments over \$100, then #Limited.

Just like the ecatel accusation, i'm almost 100% sure they still allow spoofing.

BlackLayer - August 31, 2013, 8:36 pm

(Aug 31, 2013 08:26 PM)Matak Wrote: [\[CITE\]](#) 100% Agreed. The only thing about server4you, was that they offered to tack on \$5 a month, instead of paying the 1 time payment of \$100.

Yes know... he good using add hide subdomain ?

xuzhe32wu - September 5, 2013, 4:17 pm

so i got 1question a friend told me if i get a 1gbit server with 10tb bandwidth,im going waste all 10tb bandwidth just in few hours of ddos,its that true?

P.s if i buy 1 dedicated server form ecatel what would be the best os to install?

xxolddeletedxx - September 5, 2013, 4:46 pm

1GBit / second = 1/8 GByte/second = 1GByte in 8 seconds etc

means you have about 80000 seconds of DDoS at full rate, which equals roughly 22 hours.

xuzhe32wu - September 5, 2013, 5:13 pm

(Sep 5, 2013 04:46 PM)DeeDeeOS Wrote: [\[CITE\]](#) 1GBit / second = 1/8 GByte/second = 1GByte in 8 seconds etc

Recommend for you

Personal server = 50TB
Customers server = 100TB
LinuxOS = CentOS 6.4 64bit

delete bash_history file from /root, upload script mode attack from /bin without command "./" ?

ItsFluffy - September 6, 2013, 5:40 pm

(Sep 6, 2013 06:09 AM)???????||?????| Wrote: [\[CITE\]](#) delete bash_history file from /root, upload script mode attack from /bin without command "./" ?

-why delete bash history? it can be very useful
-upload from /bin... what do you mean?

xxolddeletedxx - September 6, 2013, 5:44 pm

(Sep 6, 2013 05:40 PM)ItsFluffy Wrote: [\[CITE\]](#) -why delete bash history? it can be very useful
-upload from /bin... what do you mean?

a) Deleting it once doesn't delete it forever. I don't see why myself, either, tho. Considering its actually your dedi.

b) He prolly wants to have it in /bin so you can just "ddos ..." instead of "./ddos ..." or something.

ItsFluffy - September 6, 2013, 5:55 pm

(Sep 6, 2013 05:44 PM)DeeDeeOS Wrote: [\[CITE\]](#) a) Deleting it once doesn't delete it forever. I don't see why myself, either, tho. Considering its actually your dedi.

hm

-if the consideration is so there's no logs for the host that's wrong b/c they keep entirely different logs at router level which a user can't see

-i didn't think about that but it doesn't rele much make a difference

xxolddeletedxx - September 6, 2013, 5:57 pm

(Sep 6, 2013 05:55 PM)ItsFluffy Wrote: [\[CITE\]](#) -if the consideration is so there's no logs for the host that's wrong b/c they keep entirely different logs at router level which a user can't see

They can't even keep logs of SSH sessions unless they inject a fake key from the first time you connect forever (which is illegal almost everywhere)

ItsFluffy - September 6, 2013, 6:01 pm

if u use a dns scanner or make any dos attack spoofed or not they can log the event, its easy it becomes a matter of whether or not they care to do it and thats the whole point of finding a carefree host

xxolddeletedxx - September 6, 2013, 6:08 pm

(Sep 6, 2013 06:01 PM)ItsFluffy Wrote: [\[CITE\]](#) if u use a dns scanner or make any dos attack spoofed or not they can log the event, its easy

it becomes a matter of whether or not they care to do it and thats the whole point of finding a carefree host

Well obviously, they can log your scans, they can even log if you do spoofed attacks (if they want to).

As you said, its a matter if they care, and how they care

BlackLayer - September 6, 2013, 11:09 pm

(Sep 6, 2013 05:40 PM)ItsFluffy Wrote: [\[CITE\]](#) -why delete bash history? it can be very useful -upload from /bin... what do you mean?

so good delete bash_history found no evidence of flood command.

Example

if you upload script from root command: ./juno8 127.0.0.1

recommend upload file from /bin for without command "./"

just command: juno8 127.0.0.1

?

(Sep 7, 2013 12:48 AM)worshipmyhalo Wrote: [\[CITE\]](#) i got a few servers, helping out a mate set his up now! Will reply soon

would you please comment which servers you bought so we can know thanks

Unafflicted - September 8, 2013, 2:08 pm

I have a question:

If I were to buy an Ecatel, which one would be better?

1: 123 euro deal with 100TB on unmetered 1Gb

OR

2: 62 euro deal with 100MBit umetered?

From the start of the thread, it seemed like people were talking about how people with the 1GBit deal got fucked over. I have also noted that some people say Ecatel has blocked ports.

ItsFluffy - September 8, 2013, 2:12 pm

some 1G servers from ecatel get their port limited

they dont do it to every single user but they do it to a majority now

Canc?r - September 8, 2013, 2:47 pm

(Sep 6, 2013 11:09 PM)????????||?????| Wrote: [\[CITE\]](#) so good delete bash_history found no evidence of flood command.

Example

if you upload script from root command: ./juno8 127.0.0.1

recommend upload file from /bin for without command "./"

just command: juno8 127.0.0.1

?

If you own the server there is no point of deleting your bash history unless you're paranoid, in which case you can setup a crontab to recursively delete log files every 5 minutes or so.

Also the whole /bin thing is incorrect, I think what you mean is creating an alias in Linux ?, example:
Quote:alias juno8='/usr/bin/juno8 arg1'

ItsFluffy - September 8, 2013, 3:03 pm

(Sep 8, 2013 02:47 PM)Canc?r Wrote: [\[CITE\]](#) If you own the server there is no point of deleting your bash history unless you're paranoid, in which case you can setup a crontab to recursively delete log files every 5 minutes or so.

good post

however, alias or bin doesn't much matter b/c as previously mentioned, the hosting company has router level logs a vps or dedi buyer cannot get ahold of and if any issue is ever brought up the host uses their logs for proof and a simple bash history means nothing in terms of defending yourself

BlackLayer - September 9, 2013, 4:08 am

did you test .bash_history? ? delete forever

n1ggy1ggy - September 12, 2013, 12:53 am

After entering the terminal session, simply enter:

export HISTFILE=/dev/null

Voila. All commands for that session do not get logged and get routed to the nether regions of space.

Or as stated earlier you can use ignorespace and add a space before commands you wish to hide afterwards from history as so:

```
export HISTCONTROL=ignorespace
```

Commands you use thereafter will be logged, while ones prepended with a space, will not.

But as others have stated in this thread, if it's the hosts machine, only they know what they log and at which levels. It's not like they can't still use a log of tons of outbound and obviously malicious packets as evidence for ban or termination. So why bother hiding your bash history? You think that will save your account and your money? I doubt it.

Egregious - September 12, 2013, 8:15 pm

Contacted almost all the "good" hosts on the list and they all do not allow IP spoofing and server stress testing. Ecatel is the only one who allows it.

Ordinary - September 12, 2013, 9:23 pm

that is confusing, but to have a CDN server limited is fkd up, thats a lot of money down the drain

HatefulPony - September 14, 2013, 4:54 am

What is spoofing, like spoofing your IP address / host name?

John429 - September 14, 2013, 12:25 pm

(Sep 14, 2013 04:54 AM)HatefulPony Wrote: [\[CITE\]](#) What is spoofing, like spoofing your IP address / host name?

Yes, it is spoofing the source IP address in the packet header... this is used for DRDoS amplification attacks since you send out packets spoofed as the victim such that they will receive the traffic and not your server. Some data centers have egress filtering which does not allow for spoofing and is the purpose of this thread (too bad no one is willing to give up lesser known hosts that allow spoofing).

ItsFluffy - September 14, 2013, 5:21 pm

the bigger problem than finding a host nowadays is finding a host that isn't charging an arm and a leg for spoofing capabilities

mecom - September 24, 2013, 10:26 pm

just make sure that u dont use SSYN attacks on ecatel , that ruins their network , udp/dns dont get noticed so fast

John429 - September 24, 2013, 11:38 pm

(Sep 24, 2013 10:26 PM)mecom Wrote: [\[CITE\]](#) just make sure that u dont use SSYN attacks on ecatel , that ruins their network , udp/dns dont get noticed so fast

Ok, so instead of sending out 60 byte packets (remember the padding up to 60 bytes on wire), I'll just send out a 67 byte DNS queries... that make's a huge difference.

mecom - September 25, 2013, 12:17 am

jup thats what i got told , had someting to to with routers and different requests

Stop spam 5 message ?

We've don't test that vps spoof, just dedicated server, then go buy vps for test!

Taranis - December 4, 2013, 2:20 pm

Anyone tested the Ubiquity server VPS ? How much output can it punch ?

christi - January 22, 2014, 1:28 pm

You guys shouldn't ask the "support" if they allow IP spoofing. It's something that if they do they do for sloppiness or misconfiguration, and it is certainly not a seeling point for the normal buyer.

Anyway.

Not properly global ip spoofing, but most hosting providers allow local ip spoofing, that is: you can spoof with any source ip when targeting in the same datacenter

you can spoof any server in the datacenter when targeting outside the datacenter

you cannot spoof any source when targeting outside the datacenter

Most of the times you need a dedicated server anyway. Here's what I happened to test:

www.hetzner.com (requires dedi)

www.strato.de (requires dedi)

www.digitalocean.com (vps, that's all they offer anyway)

It's easy to try on digitalocean, register with a coupon (<http://www.retailmenot.com/> don't give up early, try all of them) and you get 2-4 months worth of one micro instance.

maciek1910 - January 22, 2014, 2:47 pm

Asylum1358 - February 12, 2014, 10:26 pm

I currently have <http://ramnode.com/> and it allows spoofing, but account was suspended once for UDP Flooding. Just have to keep the output down...DNS Amp attacks work great from it though.

500GB Bandwidth

Yeah.. Perfect...

It would run out instantly

Darunia - February 13, 2014, 4:31 pm

Serverhub does not allow spoofing anymore.

Yeah 100% sure

I think after u putted this link 3 months on this forum everyone started to order like crazy ? And now they disabled it apperantly on new servers
