Thread: [Kali Linux error](#)

Bat™ - August 31, 2013, 11:13 am

Kali installs fine on virtual box or vmware tried both.

But when I try to boot up there are some error listed below:

1. TSC Calibration failed.
2. Portmapper error.
3. Insufficient space using tmpfs for mounting.

Then it shows Oh No something has gone wrong. Need help ASAP.

Done with BackTrack

Tried on two pc but still same error :(

Do you have for example a cooling fan or anything else plugged in by USB?

If so try to unplug it then try booting Kali again.
