Thread: [Bypass Microsoft hotmail scan, and Security Essentials](#)

rrrqwe11 - September 6, 2013, 2:33 pm

how can i bypass the security scan on hotmail when i want to send an keylogger file or a rat file ???

because it gets blocked when i tested it, sending from and to an hotmail account...
and you cant download it either from upload sites, cause it gets deleted.

?
thanks

Pack it into a zip file. That should solve this one.

rrrqwe11 - September 6, 2013, 3:21 pm

noo it still gets detected, fucking fuck

W R T - September 6, 2013, 4:14 pm

When you pack it into a zip file it does nothing, all's zipping something does is make a bunch of files one pretty much. You need to tie your RAT to something, can't just send the .exe over email.

Kerberos - September 6, 2013, 4:21 pm

Scanners decompress archives and scan them for infections. You create a rar archive and password protect it to prevent this. Although some just reject them anyway

That's what I was worried about, it would probably auto reject it because it can't access the archive.

I am not a 'hacker' I would not know, I know how to prevent things like that. [YouTube](#) will be your best bet on that or even [Google](#). I know that you need to mount the virus on something and it will make your life a lot easier.

Cheers,
Mike
