step 7 - download Istealer 5.0 (MOD)

Download at your own risk :)

step 8 - Open \Istealer5.1\PHP Logger\index.php and edit the configuration information.
All of the information is commented at the side, it's clear what it is. Leave localhost as it is.

step 9 - go to "File manager" in the cpanel and upload index.php & style.css

Step 10 - After this, your iStealer is set up, <http://www.yourwebsite.x10hosting.com/index.php>
Log in there to view your logs (login with your database username and password). Simple enough.

[img]<http://img21.imageshack.us/img21/9096/77083068.png>[/img]

Step 11 - Open iStealer 5.0.1 and fill in all of the necessary information.
The "Url" will be <http://yourwebsitename.x10hosting.com/index.php>
Then send the file to victims.
