Layer masks and appropriate use of the pen tool are pretty much the most dynamic uses of Photoshop.

While the tutorial is simple overall, it's nice to see someone post utilization of the masking features. Keep it up. :)

You could do that with a white soft brush, and set the mode to color.

Great tutorial Tikii, really informative. I had always just used the dodge tool, but I feel like it didn't look very realistic, looked almost like they were glowing. Your way seems great!
