Thread: [\[Release\]\[FREE FUD CRYPTER\] \[Tropical Crypt\] \[FUD\]\[Bypass Proactives\] \[Free 4 all\]](#)

ZetaGreys - September 9, 2013, 11:47 am

Hey guys here is a little present for the hf public :)

I coded this crypter by myself so its 100 % clean when some guys mean because my post count is very low i would infect people so please debug this crypter with everything you want you will find nothing !

And please guys dont scan the stub or the crypted file on "VIRUSTOTAL.COM"

Crypter:

[IMG]<http://s1.directupload.net/images/130909/eoda6o8b.jpg>[/IMG]

FUD Scan:

[IMG]<http://s1.directupload.net/images/130909/5kg42w6r.jpg>[/IMG]

FUD Scan Link:

http://chk4me.com/check/public/260fg53al46_PCGiF18Y

Download Link:

http://www.xup.in/dl,10902456/Tropical_Crypt.rar/

Codejock File with Registrator:

http://www.xup.in/dl,20413533/CODEJOCK_FILES_WITH_REGISTRATOR.RAR/

If you got an Codejock Error download the Codejock File with the Registrator and register it with it or manuall.

Enjoy the Crypter :)

Regards

LeNerds - September 9, 2013, 11:52 am

Scanned it like 10 times on virus total.

Not fud.

ZetaGreys - September 9, 2013, 11:59 am

No surprise that everybody hate you i want made the hf community and guys which dont have enough money to buy a private fud crypter a little present with this free fud crypter and guys like you destroy that Really good Grow up kid !

M0n5t3r - September 9, 2013, 12:53 pm

Testing it out now, but it looks good :D

~~

Doesn't seem to work :(

webdev77 - September 9, 2013, 12:54 pm

(Sep 9, 2013 11:52 AM)LeNerds Wrote: [\[CITE\]](#) Scanned it like 10 times on virus total.
Not fud.

Obviously it's not going to be fud if you scan on virus total. They distribute samples thus making it automatically detected within a few days.

ZetaGreys - September 9, 2013, 1:10 pm

@M0n5t3r where is the problem ? does you file dont work after crypt ? then maybe you should enable eof support

@webdev77 i think this guy know that but he dont want that other guys of the community have fun with it i hate those guys ...

But dont worry guys i will wait till the stub goes detect and when it is i will make a new fud stub and upload here again :)

Regards

x41N - September 9, 2013, 1:23 pm

LeNerds how stupid can you be honestly.

Go put a knife in your toaster.

Regulus - September 9, 2013, 1:24 pm

Waiting too get a vouch from a L33T or a UB3R. :)

Burnzy - September 9, 2013, 1:28 pm

amm i would not trust this because member has only 9 posts, maybe if someone could run this on a VM?

Cletus Kasady - September 9, 2013, 1:30 pm

I wouldnt trust this, i believe it to be infected especially since he gives a reason as to why it is giving and error message!

ZetaGreys - September 9, 2013, 1:44 pm

How i said the crypter is 100 % clean i only wanted to make a good start @ this forum and make other guys from here a little present please when you dont trust me run it on vm on every sandbox use every debugger what you want you will found nothing only a clean builder and a clean fud stub have fun with it :)

and @ Cletus Kasady which error you get ? when its the codejock error you need download the codejock dll and dont worry that is dont infected to the codejock dll is only for the design from the crypter

Regards

DR34M - September 9, 2013, 1:54 pm

i think that the file is infected because it gets a error

ZetaGreys - September 9, 2013, 1:56 pm

I wrote it in the first post the crypter use codejock controls so you need to download the dll and

register it with the registrator when you think the registrator is infected to register it manuall this crypter is 100 % clean.

DR34M - September 9, 2013, 3:14 pm

its a really good crypter i use it its not a virus

ZetaGreys - September 9, 2013, 3:40 pm

Thank you for the nice feedback :)

Regards

Its still Fud :) here a scan which i just made

[IMG]<http://s1.directupload.net/images/130910/p8j2v388.jpg>[IMG]

IceTimux - September 9, 2013, 6:42 pm

Legit. I vouch for this guy, you skids stop hating on him , he built a good crypter for you guys.

I have to agree....on another note.... glad to see you're using the sig I made you ?

ZetaGreys - September 10, 2013, 3:36 am

Thank you guys for the nice feedbacks when oyu have problems or questions feel free to contact me :)

Regards

nadtssn - September 10, 2013, 4:15 am

Hey.. will this crypter works for cybergate?

ZetaGreys - September 10, 2013, 4:37 am

Of course it work but i dont know extactly if cybergate use eof so when you try make one crypted server without eof support and one with eof support you must test which from these both files work then :)

Crypter is still fud :)

[IMG]<http://s14.directupload.net/images/130910/szs4axkq.jpg>[IMG]

LeNerds - September 10, 2013, 7:17 am

Alright just rescanned it 5 more times for you guys.
Currently fud.

albanjan - September 10, 2013, 10:09 am

it doesn't work file is missing, download files in system/32 and even in folder.. still same error

ZetaGreys - September 10, 2013, 11:09 am

Download the Codejock Package execute the administator and press register after that you can easy use the crypter ;)

or you download the Codejock Package and you copy the dll in system32 folder and syswow64 folder (when you have) after that you open CMD as admin and you write that : regsvr32 [CodejockDllName] and press Enter than its registered too :) its your choice what way you take :)

Greetz

Hey what happend?

I scanned it like 15 times with different options not work?

<https://www.virustotal.com/en/file/a82fbd570e9b3d0796aee14c1c5dbc4989a84cba75f6d4aa7f5a10ea83599c9e/analysis/1378838473/>

Every time 2/47!

Fix this !

Garden of Sinners - September 10, 2013, 12:46 pm

(Sep 10, 2013 12:13 PM)LeNerds Wrote: [\[CITE\]](#) Wow you made my day.

You are way more retarded than any one who I saw here.

You are either a fail troll or just can't appreciate the hard work that this member has put into the making of this crypter. As for why the others don't pick it up is because they have different algorithms to determine whether the file is a virus or not. They will eventually add that into their systems as a virus it's the natural way of these type of things.

Also what kind of retard goes into the "Hacking Tools and Programs" section and deliberately goes and scan's the file so that company's who make antiviruses such as Kaspersky be able to detect the file. It clearly states in the original post "DO NOT SCAN ON VIRUSTOTAL.COM". Please learn to read it'll do the world a lot of good.

Here's a tidbit of advice from me. I recommend you stay out of the section in future and try to get your brain around the fact that yes people make these tools and they will eventually be found and detected with or without your help so if you want to do this again, I recommend you leave the forums.

Have a nice day.

Betaskids - September 10, 2013, 9:25 pm

It doesn't works.

Scanned a couple of times in meta scan and virus total.

You should really fix this as fast as possible

nemesisobaara - September 13, 2013, 11:15 am

why are this noobs scanning this great wrk on virutotal? some idiots here deserve a permanent ban...foools....thumbsup thread owner...nice job there

anony-nl - September 24, 2013, 11:49 am

Omg, bitches that scan it on VT. VT DOES SENT IT TO THE VIRUS SCANNERS, OMGGFF

RAT Support - September 24, 2013, 2:55 pm

Use this at your own risk as i dont trust this member

mozess408 - May 9, 2018, 1:11 pm

Bro

I am looking for njrat compatible crypter .
thx

Eccy - May 9, 2018, 1:14 pm

Sir you need to drop a chromosome you have too many

thx

susan743 - July 29, 2018, 9:04 am

But we can all test it and see if it works. Lets always act good to be honest of the work. Lets appreciate it.
