Thread: [Get Remote Control of A Computer \[FUD\] No Crypter Needed!](#)

DrDinosaur - September 13, 2013, 12:52 am

This method uses PowerShell Injection which never touches disk to bypass all AV. You do need a USB Rubber Ducky or Teensy and about a minute of physical access on a new computer. After that, you can use Meterpreter to control the target computer. Check out the other videos if you wish as well.

paewand sahd - September 13, 2013, 2:40 pm

thanks for this tutorial
good...

Cowhead2000 - September 13, 2013, 3:21 pm

amazing shit! thank you so much! will definitely try this out

--Alexander-- - September 17, 2013, 12:57 pm

what options do i have else than view sys info ?

IceTimux - September 17, 2013, 1:11 pm

Thanks for the share OP, looks legit.

-3?? - September 17, 2013, 1:16 pm

Rawr, thanks for another HQ thread Dinosaur ?

norton 360 catches it think twice before you right

/Jigsaw/ - January 26, 2014, 12:26 pm

Thanks for the TuT OP. Very nice! :)

Fizure - January 26, 2014, 12:56 pm

Looks interesting the bad thing is that you need physical access to the computer still good tho...

You have a USB Rubber Ducky and you tested it exactly with this? I kind of doubt it since you can't even spell the AV you used right.

Positive Vibe - January 27, 2014, 7:58 pm

nice share, will come back to this for sure

wurmt0ngue - January 28, 2014, 6:40 pm

Nice job dude, a real tutorial in a sea of crap

AndyFinner - January 29, 2014, 3:46 pm

Going to have to try this one out when I find the right victim for the job ;) Nice write up, Thanks!

hahdbwoannniabs - February 14, 2014, 6:22 pm

Only thing I don't like about this one is that it requires physical access, ugh.

Though it wouldn't be a bad idea to test on some school computers considering my school has the crappiest security in the world.

rainfa11s - February 14, 2014, 7:01 pm

Really awesome info man! Can't wait to test it out.
