Vouch for Anon.Q.

He has helped me multiple times.

If you need any help with DarkComet this is the guy to come to.

coolerfarmer - September 14, 2013, 10:41 am

hey,

i bought 100 loads from Dean. Now i want to download and execute a file on these 100 pc's (for pandemic). So i uplaoded it to <http://zalil.ru> (direct dl=<http://zalil.ru/34723843/770feaf4.52353ed0/cripted.exe>). but when i mass download the file with the clients it doesn't work. also when i go to networkfunction/urldownloader and add the file, it says failed! why?

Thanks for helping

--

coolerfarmer

RAT Support - September 14, 2013, 10:51 am

It could be a number of things.

- 1: It could be a corrupted Dark Comet client that means the function's are not working properly.
- 2: Have you tried other functions on dark comet like update from url ect..
- 3: Could just be restriction's of the victim for example some people dont have admin privileges which can also affect this.

If you want me to have a look via Tv then pm me.

Hopefully you wont need too :)

Viam Inveniemus - September 14, 2013, 2:50 pm

Hello can you help me please i have a problem:

- 1: I Need Complete Set-up assistance with Dark Comet.

I have No-IP, have the ports forwarded, but for some reason when I run the stub it doesn't appear.

Help please.

Regards, Sloth.

Anon helped me setup my RAT within minutes, he has a great attitude when it comes to asking questions to.

I definitely recommend you guys to use him

Where is it.

You created the topic a long time ago. A whopping 20-days-ago.

URL Link: <https://hackforums.net/showthread.php?tid=3734723>

RAT Support - September 24, 2013, 6:12 am

Well i did get hacked once but idk.

I never actually made that

Depravity - September 24, 2013, 6:20 am

I highly doubt anyone compromised your account 4-days after your account registration just to request for assistance.

There is no reason to portray yourself as an elite hacker, bro.
You aren't deceiving anyone but yourself.

RAT Support - September 24, 2013, 6:51 am

Did i say i was an elite hacker.

No im here to give HQ Support with rats.

Since when did i say i was an elite hacker.

Stop trying to trash my thread when its only making you look like a fool.

Also not being funny but you cant say anything you have 1.4k posts + 53 rep in 5 years.

I dont see you offering help to new people or anyone infact apart from just selling your product.

Also yes i have been for over a year just go ask Business as he set my first dark comet up around 1 year ago when his name was RAT SETUP

Enough said now gtfo my thread and actually help people

Styx™ - September 24, 2013, 7:13 am

You are both getting a bit off topic, this is supposed to be a support thread for new users who are trying to get into ratting.

(Sep 24, 2013 06:20 AM)Depravity Wrote: [\[CITE\]](#) I highly doubt anyone compromised your account 4-days after your account registration just to request for assistance.

1.) How am I the fool? You ridiculed yourself.

2.) Selling what product?

3.) I registered in 2010, not in 2008.

4.) Reputation points are meaningless.

5.) Yeah, I "don't" help people.

<https://hackforums.net/showthread.php?tid=2617567>

Anyways, good luck to you and your endeavors.

You should invest some money into reading glasses, or prescription medicine for attention deficiency.

What the fuck is your problem? let the guy give help to people ffs, why do you even care? Aslong as hes helping people it is good, why not let him? ...

jimmyjimmywe - September 24, 2013, 7:53 am

I'm having major issues with portforwarding. I can run get success on canyouseeme, even run the rat on myself with 127.0.0.1 (and I'll see myself), but when I attempt to use my external IP to make the exe ad run it on another computer with the same port, I get absolutely nothing. Any thoughts?

Depravity - September 24, 2013, 7:58 am

(Sep 24, 2013 07:50 AM)Noname Fail Wrote: [\[CITE\]](#) What the fuck is your problem? let the guy give help to people ffs, why do you even care? Aslong as hes helping people it is good, why not let him?

...

If so, then he shouldn't have blatantly lied, just to improve his reputation.

RAT Support - September 24, 2013, 9:31 am

(Sep 24, 2013 07:58 AM)Depravity Wrote: [\[CITE\]](#) If so, then he shouldn't have blatantly lied, just to improve his reputation.

How does it improve my reputation.

People know i can do what i say so thats all at matters.

Just grow up and stop being childish and maybe if you actually help people instead of looking for stupid things to complain about then people would actually stick up for you.

I don't even know half the people that are backing me up with this and they still support me.

This prove's i know what im doing and i give HQ support for free.

If i was a complete idiot i would be selling this but am i?

No im not i give the best support i can give which i dedicate my time doing.

Now im not going to argue about this anymore if you keep complaining you will just get reported as your making a big issue over nothing.

Bye

Depravity - September 24, 2013, 4:28 pm

First and foremost, let me clarify this statement, because it's inevitable that you're blind. I respect you for voluntarily assisting the community, but there was no reason to blatantly lie to people that your account was compromised 4-days after your registration date, and requested for DarkComet R.A.T. setup assistance.

You portray yourself as an 1337h4x0r, and it seems arrogant, and farfetched.

Let me reword my statement. It deteriorates your Reputation, because you're afraid that the community would not request for assistance, if you, yourself, had difficulties setting up DarkComet R.A.T. on your computer not too long ago.

Selling R.A.T. setup assistance?

Good luck with that. Anybody could read, and follow a tutorial.

Oh, also, I don't "help" people? Please, you lack sufficient evidence to support your statement.

Also, you mentioned that everyone is entitled to their own opinion.

Therefore, you must be narcissistic if you believe that you offer the best support on a forum.

There is still a few of us that just enjoy helping others for nothing so if you need help just ask :)

foxtrott50 - May 6, 2017, 4:16 am

Hey guys, RAT Support is the man. He took his time and explained loads of things to me and even showed me too. I vouch for him 1000 times over.

mydammedlife - May 7, 2017, 10:34 am

i am using nanocore and topher crypter ,my server 1/35 ,and i m buying bots from pinkloads .but i m getting only window 7 bots with no av ,,only why so ?

i hv luminosity link paid rat too bt as i heard on hf its shit now
wat cn i do?

RAT Support - May 7, 2017, 10:39 am

You sure they are not honeypots?

Hit me up on discord i can help you faster.

RAT Support#8427

RAT Support - May 11, 2017, 7:59 pm

Still got plenty of free time if anyone needs help still ?

Excalibur' - May 15, 2017, 11:36 am

Are you doing it for money or free?

RAT Support - May 15, 2017, 1:43 pm

I do it for free.

RATs are like the easiest things you could possibly do so unless someone want's to pay i don't ask for anything.

chalaji080 - May 17, 2017, 9:00 pm

I need rat setup. pls help

Coyote Starrk - May 18, 2017, 3:15 am

I added you on discord man :)

RAT Support - May 18, 2017, 5:18 am

Haha its just nice to be back full time and I enjoy helping others so why not :)

Will do :P

Alex020 - May 18, 2017, 11:55 pm

Okay, this thread seems Intresting hope you all can help me.

I need to setup a RAT but I always just fail in port forwarding.

First you should see my internet setup.

My ISP>WAN IP>MY ISP Internal Network(NAT)IP 10.x.x.x >My Router >My PC.

Image Link: [http ://i64. tiny pic .com/6qcx2v.jpg](http://i64.tinypic.com/6qcx2v.jpg)(I've inserted spaces because I don't have 50 posts

till now & I don't wanna SPAM.)

So as I forward my ports 1604, 57304, 8080 etc. but in canyouseeme.org none of my port are being shown open not even port 80.

So, please help me with port forward.

RAT Support - May 19, 2017, 12:28 am

So, please help me with port forward.

Firstly you need to be actively listening to that port for it to display open so either listen on your RAT client or grab this tool and turn it on.

<http://www.rjlsoftware.com/software/utility/portlistener/>

Secondly make sure either the firewall is turned off "thats fine for testing" and make exceptions for the ports you require.

If you still need help contact me on discord and I will help you directly through Teamviewer.

Also i would advise if your using RATs to grab a vpn that allows port forwarding such as

<http://www.phybervpn.com> or something similar.

I don't mass spread RATs for illegal purposes so that vpn is fine for me plus only costs \$1.50 a month.

BabyFox777 - May 19, 2017, 12:32 am

Vouch for RAT Support.

He know i think all about RAT and help for free, thanks.

Alex020 - May 19, 2017, 12:55 am

All of my Firewalls are turned off.In my PC Windows Firewall and Avast firewall both are off,I even turned my Router firewall off.

I think the NAT my ISP is using It is blocking all ports.When on my ISP ,I use canyouseeme and check port 80 it shows "connection timed out"

But when I use VPN([censored]) and try can you see me, it and test port 80 and shows success.

lynnex - May 19, 2017, 1:12 am

Huge vouch for RAT Support, sent him a request on Discord & within 2 minutes he accepted and fixed my problem again within 2 minutes.

He doesn't ever ask for money just helps you with whatever problem you have & moves on.

If you ever need help w/ Remote Administration Tools this man is the right person to go to, thanks again.

Alex020 - May 19, 2017, 4:28 am

? ? Thanks for helping me, he helped to ASAP, Now i just need to Buy a VPN and all set-Up
Thanks again.??

Your welcome, If you need anything else feel free to contact me ?

RAT Support - May 24, 2017, 11:51 am

Got all day tomorrow off work free so if anyone needs any help with anything related to the thread
msg here or add me on discord.

Rahul007rhp - May 27, 2017, 10:05 am

I wasted an entire day playing with a andriod rat and still im facing some issues i would be so happy
if you could just assist a bit sir.

Thanks shoot me a pm please

RAT Support - May 29, 2017, 5:26 pm

Because of the release of my RAT Setup & Mentoring service this help desk only supports the very
basics & free RATs only.

Thanks for your time and continued support.

Thanks haha, yea is nice helping others :3 ?

TannerKnight - June 4, 2017, 10:47 am

Hey rat I pmed you. It would be great if we can talk!

RAT Support - January 26, 2020, 9:34 am

Reopened bumping this as I have some free time and returning to help out.

Mr.Anonops - January 26, 2020, 8:07 pm

Hello, can you pm me your telegram please ?

bobcat - January 26, 2020, 10:18 pm

Hi! Is Quasar still a viable option to use in the wild? Crypted of course.

Please answer in thread so others know too, thanks!

RAT Support - January 27, 2020, 4:58 am

Its not bad but don't expect to have it 100% FUD.

bobcat - January 27, 2020, 8:41 am

I want like 100 bots to use them as proxies, what do you think would be my best option?

RAT Support - January 27, 2020, 8:44 am

Not used that feature in a long time but any Rat that holds connections and doesn't drop with that feature will be fine.

Remember the speed will be down to the distance between you and your slave and the speed of the client you are using.

I can't give you a decent recommendation since I have not used Rats for anything like that in a long time but that feature will be fine with any that support it.

bobcat - January 27, 2020, 8:51 am

Alright cool, thanks a lot. I'll try my luck with Quasar.

What is too many? I should be able to handle a couple 100 on an RDP right?

PebbleStone - January 31, 2020, 4:23 pm

Hi,

Can you DM please? I am interested in your services.
