Best I've seen, but since you released before Emissary v3, you put yourself at a disadvantage in the competition =P

**failzathacking** - April 28, 2010, 7:23 pm

Sigh... So As always I failathacking :)

Since I had infected myself on accident with my botnet (forgot to remove myself) I then decided to infect all theconnections with my keylogger for laughs. Haha, Now im infected. Can't go to google. I mean my god. Cmon.

Anyway you can figure out a way to un-install the keylogger if you infected yourself? :)  
Never mind I got it removed :P

well does it work legitly or not? simple question to the forums people.

1. Have you tested it
2. Does it build to the place you want it to?
3. Don't always trust everything people put on here.
