Thread: [Changing to MAC](#)

Fabulou5 - September 18, 2013, 8:04 am

Hello there,

Could i install Mac OS on my laptop? I'm using windows 7 ultimate for now.

Laptop's specs:

Processor Intel® Pentium® processor P6200
clock speed : 2.13 GHz
3rd level cache : 3 MB
Front Side Bus : 1,066 MHz

Memory (RAM)
4GB 1333 MHz DDR3

Graphics
ATI Mobility Radeon HD 5470 512MB

For more info use the following link:

<http://www.toshibamea.com/ComputerProduc...7?pageid=4>

P.S I'm posting the same here because nobody answered me on Mac's forum.

dbzdivik - September 18, 2013, 8:42 am

Maybe it shouldn't work as I installed Mac on My Toshiba Satellite C665 SinglecCore but it didn't work great you can try if you have windows to install again if not work..

Aura - September 18, 2013, 9:35 am

This thread is not the right section.

You should go post this in the Hackintosh subsection of the OS X section.

This section is specifically for these questions.

<http://www.hackintosh.com/> - However it takes quite specific hardware

Polymath 1.0 - September 19, 2013, 6:09 pm

Short answer is NO you can not install an Apple released MAC O/S on your PC, it requires specialized hardware and firmware. You can run it as a Guest O/S in a Virtual Machine under a Windows/Linux/Unix Host O/S or attempt to run an older and dated, highly modified Apple O/S called OSx86 http://wiki.osx86project.org/wiki/index.php/Main_Page Personally I'd just use any of a number of Unix and Linux distros that have a Mac GUI look and feel. After all the Apple operating system is a certified UNIX O/S with just the Apple Finder front end.

Take care

Black?jack - September 20, 2013, 3:56 am

Considering the fact that your laptop is, well, a laptop, your motherboard is likely not compatible with Mac OS.

Also, @Polymath, OSx86 is not outdated whatsoever. It's the latest version of MacOS with a program that you run to apply a few patches and drivers.

I also found installing a MAC OS difficult but with this link <http://support.apple.com/kb/HT3910> it is easy to install MAC OS on computers.

Try you will definitely be able to install it.

[Change MAC Address](#)

He wants to install Mac OS on a normal "PC," not on a Mac,

Also, Mac is not an acronym, it is an abbreviation of "Macintosh." Don't capitalize all 3 letters in it.
