Thread: [Effective Torrent Spreading guide/tutorial + tracker list](#)

smokingmaster - September 20, 2013, 4:54 am

Hello HackForums?,

My name is smokingmaster? and i would like the help people spreading there torrent files more effective.I am torrentsreading 6 month's now,and learned some tricks.

I spread every week at least 3 new torrents,and when you properly re-fud/Crypt your server.exe and slaves twice a week.

You will own hundreds off slaves after a few month's.

I will tell you about my current temporary set-up(maybe insane) at home,and how i upload torrents to torrentsites.(How to create the torrent file i won't learn you).

You get a good working 2013 homemade trackerlist and links to my "let the magic happen" torrent sites.

At first!What will we upload?

When torrentsreading i only spread music and games/software.

Every week i spread 2 songs and one game/software

I give you a few working examples of my spreading methods;

Music:

When i spread mp3's:I choose a nr1 song and download it,then i ad a "Read Me.txt" file in the same directory as the song.And use winrar to create a rar file with a catchy name like: "HQ Mp3 Artistname + song Hq Mp3!!"After that i put it up for upload.The "Read me.txt" is of course your

FUD server spoofed to look like a txt file.

With this method you can get tons of downloads,but only the people who click the "Read Me.txt"Get infected!

The people who don't read the the "Read Me.txt"keep seeding your torrent and boost the statistics.

Another song trick is that you rename your mp3 to "Password Protected Artistname+song HQ Mp3" and use winrar

to create a rar file of the mp3.Then put a "Pass To Unrar.txt" in the same directory and rar it all together.

And create that catchy name again "HQ Mp3 Artistname + song Hq Mp3!!" Then put it up for upload and your done.

With this method you get more slaves,because more people will click the "txt"flie.The people who click the

Mp3.rar first recieve there song and a few keep seeding.

Games:

When spreading games/software you can apply the "Read Me.txt" strategy as described above.Just include it at a working game's

directory and start spreading.The best thing is to find a working Nr1 game/software and bind the game's/software's autorun.exe together with

your server.exe. Make sure it is fixed, zip it up and start spreading.

How I upload:

I have a main desktop and a laptop running for spreading my torrents.

My main desktop has virtualbox installed. And it's running Windows 7 with bittorrent behind a vpn.

My laptop is connected to a cracked wifi hotspot. But it also has virtualbox installed.

And running Windows 7 with bittorrent behind a different vpn as my desktop. (still got it?)

The laptop main O.S. also has bittorrent installed. So here we go, when I start uploading torrent's I begin to upload my torrent to all

3 different bittorrent client's on my laptop(2) and desktop(1). (It's already getting seeded at 3 different ip/countries at this point)

Then I start uploading to the websites below in that order. At first upload to the no registration sites, then wait at least 4 hours

before uploading to the registered sites. After that just relax and watch the slaves come in....

Please note that you will get banned after a while from upload sites. So keep making fresh accounts.

The torrent uploadsites we will use:

<http://www.seedpeer.me/upload.html> (No Registration!)

<http://www.monova.org/upload.php> (No Registration!)

<http://www.nyaa.se/?page=upload> (No Registration!)

<http://torrents.sumotorrent.sx/upload.php> (No Registration!)

<http://extratorrent.com/register/> (Needs registration!)

<http://www.torrentfunk.com/signup.html> (Needs registration!)

<http://www.torrentbox.com/account-create.php> (Needs registration!)

<http://www.torrentreactor.net/register.php> (Needs registration!)

<http://?#.sx/register> (Needs registration!)

Please leave a comment and give me a rating. Tell me if you find this thread helpfull or not.

Thanks Gr smokingmaster?

Shidoshi - September 20, 2013, 5:30 am

I wanted to start spreading and I was a bit lost.

This is helpful.

Vaxorr - September 20, 2013, 5:55 am

very well explained and HQ thread keep it up mate and welcome to HackForums

Great post mate, very informative. Cheers mucker!

zagazeta - September 22, 2013, 3:45 pm

Top of the line sciddy question, how important is having a VPN? I'm new to Ratting and I was just wondering.

Great post, this tactic would be social engineering, am I right?

smokingmaster - September 22, 2013, 5:19 pm

If your going to seed a lot of torrents(Trojans) i should rent one.Because
your ip ?
is visible for the downloaders

You can ofcourse help the initial seed after a while,by downloading the torrent file of a site where you have uploaded your trojan to.(don't forget to "like" the seed)

Hope this helped.

cyb3rzone - September 23, 2013, 4:39 am

Just Add some Images on How to make Torrent. There are some members who do not know how to make .torrent file

TheMeleco - September 23, 2013, 4:55 am

Thanks a bunch for this post very informative!

No problem!Like to help people get things going!?

playthegame66 - September 23, 2013, 9:29 am

thanks for this tuto , i wana test it

Decker - September 28, 2013, 2:45 pm

KAT.ph would be a very good addition to your list as well

TuTu - September 29, 2013, 4:46 pm

What spoofer are you using to get a clean Read Me.txt?
I've been using the one that comes with DC and I would get ReadMetxt.exe
Definitely willing to buy a better spoofer!

Computer Forensics - September 29, 2013, 4:58 pm

Thanks for that share I don't rat or anything but cool thread man. Just checking it out.

smokingmaster - September 30, 2013, 8:39 am

Definitely willing to buy a better spoofer!

I use the one on my (private)crypter.You should Always make a DC server with no extra functions(only keylogger).and use your crypters extra functions like spoofer, persistent mode ,melt server,...

So don't buy a spoofer,by a good crypter.You need it anyways with DC.

Uiqueblhats - October 2, 2013, 3:52 am

really cool man i like this i love this shit will try soon

Jean_42 - October 28, 2013, 4:34 am

Hi, your tracker list is up to date. "Invalid tracker" say utorrent.

I never understood how this list works. I would like to get the maximum of dowload of course, but may I put a maximum of tracker or just the good ones ? I prefer french tracker too.

.mOn - October 28, 2013, 2:14 pm

Very good tutorial i have searched this long long time. :) thanks for sharing bro!

Bullet_1991 - October 28, 2013, 2:41 pm

how do you make the server into a .txt file and make it look like one?

Freakasod - March 7, 2016, 10:56 am

how can I check if the tracker is still online ?

bluffmaster - March 27, 2016, 6:26 am

Hello Please Allot of site are now down can you tell me i do same but i dont get victim

L33tness - April 13, 2016, 2:07 am

Good tut. Im sure some will find it very useful.

zernkska - April 15, 2016, 2:28 am

Beautiful. So what is behind "read me" file ? Just crypted server which don't open or picture ?
