I'm certainly interested, and the chances of anyone actually noticing is what 1-5%?

This would be such a pain to get rid of.

Amazing product man

Nice to see this tool again. I have brought this 2 times when this was belongs to previous two owners but never used for 10 days as this was not runtime FUD (owners unable to refud). This tool like a bitch, time to time changed the owners. Hope this time will hold for sometime. BTW good luck with sales.

I can vouch for this awesome program. I know the original coder of it and I also know that this is probably one of the best downloaders around!

PM me your .netseal username and I'll extend your license. It will obviously be detected at runtime if the file it's downloading is heavily detected. This is the last time it's changing owners, working on an update at the moment expect it sometime early next week.

Currently working on an update, once it's out I will announce it through Dark Nebula. It's up and running fine and will continue to be so as long as I have interest in this forum, it's currently 0/37.

Enter my contest for a chance to get upgraded or get a 6 month license of Dark Nebula!

If i fill in the serial netseal starts and delete the exe.

No need to act like a child. Your license was expired when I checked it and 30 day serials were the only things I had access to at the time as I was heading out the door.

Nevermind, 0/34 FUD when correctly setup... this product is good :)

Fenixas - November 8, 2013, 3:16 pm

Before buying anything i want to be sure.

I bought a keylogger.

So with nebula i can build a crypted server with a link to my keylogger server.
Is it possible to bind nebula with any program (or just provide link to image).
Do i need to buy crypter for my keylogger server or nebula can crypt it as well. (if i need to buy separate crypter maybe someone could recommend one)

Also is there a chance to find auto injection (server download and run then they visit a site) to victim exploit around here?

Sorry for posting here but i'm new in this forum and it does not allow me to send pm's.

Thanks

Correct.

Quote:Is it possible to bind nebula with any program (or just provide link to image).
Correct, it has unlimited file support, you can add on as many extras as you'd like.

Quote:Do i need to buy crypter for my keylogger server or nebula can crypt it as well. (if i need to buy separate crypter maybe someone could recommend one)

It depends on the detections the keylogger already has, Dark Nebula itself is FUD but if the file is heavily detected (10+) it may cause some issues, so I'd advise you at least crypt it to lower the detections. I'd go with Broad Crypter or Darkeye.

Quote:Also is there a chance to find auto injection (server download and run then they visit a site) to victim exploit around here?

Sorry for posting here but i'm new in this forum and it does not allow me to send pm's.

Thanks

All is possible with Dark Nebula.

It's all good, I don't mind one bit. ?

Fenixas - November 9, 2013, 9:26 am

I would be more interested in Dark eye crypter but they sell it only to -> (we sell the crypter only to certain members).

And with my zero reputation as a new member here i doubt that they will sell it to me.

I believe that Broad Crypter is very good but price is a bit high at a moment for myself.

So Dark nebula can work similar as those Java drive-by? Victim visits your site and silently downloads your server and runs it automatically without noticing victim?

Also i was trying to get your email from your site (you pm'ed me that you state it somewhere) but i could not see it anywhere.

And your paypal payment system does not work. I just pressed to purchase to get your paypal email address but index.php does not load...

P.S. until i don't have 10 post i can't even write to HF admins about one issue.

Is it allowed here on forum to sell e-books and with exactly same content?

One of the e-book sellers states in TOS that it is not allow to resell e-book in any way but other e-book seller i presume is real book author.

First author states that i can't do chargeback from paypal otherwise he will fill scam report... but if he is reseller him self without knowledge of real e-book author what then?

Because at a moment i bought two e-books and it's exactly the same e-book content in both of them...

Sorry for trashing your thread but there is no chance to get help without trashing anyone else thread until you reach 10 post limit... even impossible to post in marketplace even then you bought something and you want to post a review or something...

Again sorry. and thanks for help.

Nope, Dark Nebula is for making your large executable (for example Darkcomet at 800kb) only 3kb.

You'll see it in the email you receive.

A lot of people do it unfortunately, you could post a thread in marketplace discussions about it.

That's the biggest issue here at this forum that "forum noobs" if are ripped or scammed have to trash/spam other threads to be able to write pm to admin, even can't post in marketplace until there is no "reputation"...

So this software is used to spoof an already encrypted .exe. So whoever the target is downloads a "picture".jpg which will silently download and exec an encrypted RAT for example?

I'm thinking, even if the size might be a little better... isn't there some risk a firewall or something catches a download link and pervents it like (norton security or whatnot)

You answered the question yourself and no it's completely FUD.

File will be FUD, yes, if your RAT bin is 500kb this makes it 3-5kb and is easier to keep updated, good for exploit packs too, as you just upload your new bin to overwrite the old bin and continue spreading with the same FUD DND bin.

KFC Watermelon - November 24, 2013, 1:09 pm

Here is my review of this application:

The interface is sleek and very clean. It is easy to navigate and I had zero issues using it within 15 seconds of it opening.

I set the downloader to download a Plasma RAT bin, and set it to invoke the RAT into memory. This means that Plasma is never dropped, so it is undetected on runtime.

While navigating the interface, I found the Configure options to be a nice addition, but I didn't use any as Plasma has everything it needs.

The build tab has even more options which I found very nice

The downloader worked flawlessly in my test, injecting my Plasma bin into memory, thus it would be FUD scantime and runtime. The downloader is only 4KB (because I enabled invoke), and it works great.

Here is a picture of a Plasma ran through this, and ran on my VM. Plasma's installation and persistence work great without zero affect.

This is a backup file Plasma has, the persistence kicks in and runs it if Plasma is terminated or deleted.

Overall, I honestly think this product is very high quality, and suggest purchasing it. The options are great, it does what it says, and the interface is clean.

Thank you for your time, 0xDE?DBEEF. It was a pleasure talking to you.

As for Plasma customers: This can indeed make your Plasma bin FUD scantime and runtime. I also have faith that this will be FUD much longer than a standard crypter. It's really down to earth, has what it needs and NOTHING more. Less to tag, and each output is very unique. However, when you use this with Plasma, use my settings and nothing more. Plasma has its own working startup and persistence built-in and they all work great with this downloader.

DND itself doesn't trigger UAC, if my client chooses to disable UAC then yes, it has to be run as administrator, not running any 0days over here. ?

You don't need to crypt Dark Nebula Downloader, as shown above it's already FUD.

You should be automatically updated to version 3.4, if not, feel free to contact me.

Changelog:

Optimized code, produces an even smaller FUD output.

Added Scan4you scanner. (Big thanks to Assault and Rolex™)

Detections removed for non-essential options.

If you have any suggestions for new features feel free to PM me and I'll get them added.

My last final is tomorrow so during winter break I'll have some free time to work on some nice updates for Dark Nebula Downloader. ?

(Dec 5, 2013 03:10 PM)?Schock Wrote: [\[CITE\]](#) I'm not trying to trash your sales but how could this be useful?

It's a FUD downloader that's only 3kb, which if used correctly can accomplish the same results as a crypter would. It's much easier to spread a 3kb file as opposed to a 500kb+ crypted file, feel free to PM me and I'll give you a 24 hour license so you can see for yourself. Thread design is pretty shit at explaining features/what this is, I'll get a new one made in a few hours.

Does the license for DN only last x amount of time? e.g 3 months, or is that just the support element of it?

I've seen this in action and would be willing to purchase a longer license if it was based on time scale.

Sorry if already answered previously.

Keep up the good work bro.

The license for the builder last X amount of months, if there's interest I'll be more than happy to start selling longer licenses. (ie. 1, 2 years etc.) The bin lasts as long as your link is live, and support is always available as long as it's relevant.

want to ask something before i buy
Dark nebula downloader downloads and executes

1. when i put a delay time for about 1 day and that time the user doesnt have internet connection what happens? does it fail or attempts again when internet connection is established?

can i put multiple delays
ex. after 1 day it will dl and execute
after 2 days it will dl and execute other file
after 3 days... so on and so on.. just to make sure my rat is updated regularly thanks

Dark nebula downloader downloads and executes

1. when i put a delay time for about 1 day and that time the user doesnt have internet connection what happens? does it fail or attempts again when internet connection is established?

can i put multiple delays
ex. after 1 day it will dl and execute
after 2 days it will dl and execute other file
after 3 days... so on and so on.. just to make sure my rat is updated regularly thanks
That's possible, all you'd have to do is set a different mutex for each file and add it to startup, so in the event of them losing their internet connection (ie. shutdown/restart) it won't be run twice and the delay will still be in place. You can add as many files and as many delays as you'd like.

Still FUD.

Contact me via PM and we'll get it FUD, currently on my mobile since I'm home for christmas, update 3.5 will fix this.

Some icons have been known to cause unnecessary detections, randomizing the assembly lowers the detections to ~2/35, will clean the other detections (AVG) once I have access to my desktop again.

bobby24 - January 10, 2014, 11:32 am

What file extensions it supports?

Does it work as ext. spoofer or real extension that shows in screen shot under "Extension" option?

Physiqs - January 10, 2014, 9:45 pm

Bought it but have no clue how to even upload the file to my items, it brings me to "www.directlink.pw" but isn't even a website, can anyone assist me please

EDIT: Also the Scanner will not work for me

You can change it to any extension you'd like, it's just an extension spoofer.

Directlink.pw is blacklisted, working on transferring over to a new host at the moment, should be back online in less than 24 hours. As far as the scanner goes, you must be on an old version, feel free to PM me and we'll get it sorted. Nevermind, you chargedback, feel free to eat a dick. ?

Still getting problems with this

First off, when you try to change the processes description it still reads "Remote Service Application" Even if you change it. If someone looks in their Task Manager, they will immediately know what it is.

[img]<http://www.i.imgur.com/AiYfeio.png>[/img]

[img]<http://www.i.imgur.com/2nM75xw.png>[/img]

Secondly, this program seems to not work very well with Imminent Monitor, as a friend on Skype said.

Sometimes, the thing wont crypt properly, sometimes it will, but when it doesn't the stub wont launch and just crash.

[img]<http://www.i.imgur.com/rliFvoS.png>[/img]

Also a major problem is even if you select in DC to start at startup, the crypter seems to mess that up so when do restart the PC your slave wont be there.

This is not a crypter this is a downloader, please keep that in mind. Quite frankly I regret this purchase, the creator is very nice and even gave me 180 days extra, however that is useless if the damn thing wont even work.

Would not recommend unless you're ratting yourself. My final score. Quite frankly I would like my BTC back, but I really don't care anymore.

Sadly this is true.

But have to say its a good downloader..

But it will run your stub on your slaves pc, Not a crypted file.

So i guess not really a crypter..

Thanks for the quick respons, bro! Money is heading your way in a sec! :-D
is this still FUD, or am i doing something wrong?

mKris - February 22, 2014, 3:16 pm

Hey ive downloaded the program, but i cant seem to use it. It isnt FUD when i create the file?

When will you fix the problems I have talked about above? Any E.T.A?

immortalwon - February 23, 2014, 8:24 am

I am also waiting for a FUD update as well.

TOTAL25 - February 23, 2014, 4:03 pm

This looks very good, I may buy it later :)

Solomon Grundy - February 24, 2014, 1:00 pm

Coder is not online at the moment as last seen on HF was on 22nd, does he work alone or he has support team. Please be patient.....I guess him not being online is tht he is trying to fix all bug...btw I also sent him a pm to inquire which I'm as well on the waiting list for a reply

MIRKO3221 - February 24, 2014, 1:27 pm

Looks very good i want to try it :) Bitcoin payment is ok :)

GeorgeH - February 24, 2014, 7:17 pm

That's a small stub. Looks good. Any idea how long this might stay fud? Sorry if this was asked before.

A downloader that is sold to this amount of people can never remain fud more then 3 days.

Especially nod32 detects in just 2 days malwares that are spreaded alot.

Nod32 ThreatSense always sends working exe list on a computer to nod32 lab.

And they can easily detect newly mass spreaded trojans.

An now think this downloader is cheap and sold more then 300 people.

If a customer spreads to 500 people in a day then it makes 150 000 people.

If %10 of those people are using nod32 then t makes 15 000 people.

And when nod32 lab sees a software is newly installed to 15 000 pcs, it easy detects it in 24 hours.

Agixx - February 25, 2014, 10:38 pm

With this no problem

That's what I figured. I just write my own normally, but they're usually between 10-30k depending on how they're obfuscated. The nice thing about writing your own is that very often you can just change one variable within it to make it FUD again if it does ever become detected.

3kb vs 10-30kb though can make a huge difference if you've got 1000's of bots.

MaYa666 - February 26, 2014, 3:14 pm

Really nice looking! if all features work its amazing downloader!

TheDovahkiin909 - February 26, 2014, 4:03 pm

Good things are coming for Dark Nebula Downloader in the coming days, I've spent the greater majority of the night ironing out the known bugs that recently came up in 3.5, you will all be compensated for time lost.

Just wondering when the new update is coming out, I haven't been able to use this software for 14

days due to bugs. Any estimated E.T.A?

R4T1 - February 27, 2014, 7:50 am

I would like to pay with BTC but i don't have 25 posts so i can't contact you! Please PM me :)

Muggel - March 5, 2014, 9:16 am

This looks really nice. Ill consider buying it:)

RocketChroma - March 6, 2014, 2:35 am

Did I forget how to use this program since I last used it? I remember you could add a direct link, but I only get the option to "Upload File" and when I select it it takes me to the direct link website, I upload something and it gets uploaded. But for some reason nothing happens in Dark Nebula, the list just stays blank?

Ah don't worry, i've found the solution, turns out you don't need to select the arrow menu option to add an item :)

After a month long hiatus, Dark Nebula Downloader is back and is better than ever. I've spent the last month focusing on school and improving the code as well as making it fully undetected in my free time, rest assured it will stay that way for quite some time as I now have time to focus on the

project. Everyone will be compensated for time lost so feel free to PM me, when you do let me know your .netseal username.

I now accept OMC, PM me for more information.

Nice to see this tool again. I have brought this 2 times when this was belongs to previous two owners but never used for 10 days as this was not runtime FUD (owners unable to refud). This tool like a bitch, time to time changed the owners. Hope this time will hold for sometime. BTW good luck with sales.

immortalwon - April 13, 2014, 12:37 pm

You owe me about a months worth of this. It was never ReFuded and waste of 10 dollars.

Bringing this project back to life since other people seem to think they have "the best downloader on HF" ??

As of right now I can only accept BTC as my Paypal is permanently limited, although I can accept

Amazon gift cards as payment which you can purchase with paypal at gyft.com.

f1sh - October 6, 2015, 6:50 pm

I can now accept Paypal, hit me up. :) Direct link file hosting service is back up too.

I am interested if it is fud. But how is this different from a regular crypter? like wont it need to keep getting refuded?

This is a downloader, which is for making your file smaller, although I've incorporated a cloud stub so it can be done on the fly so you don't have to come to me for every update and since it uses runpe it won't be detected runtime like the other so called "downloaders" on the market that drop the file lolol so if you really wanted to it could be used as a crypter. ?

After a long time in development, I've finally finished the C++ stub, current customers contact me for update as things are a bit different this time around as I have changed servers. :)
